Offshore Pipeline Design, Analysis, and Methods A. H. Mousselli, 1981

Pipeline Engineering (2004) Henry Liu, 2017-11-22 Pipeline engineering has struggled to develop as a single field of study due to the wide range of industries and government organizations using different types of pipelines for all types of solids, liquids, and gases. This fragmentation has impeded professional development, job mobility, technology transfer, the diffusion of knowledge, and the movement of manpower. No single, authoritative course or book has existed to unite practitioners. In response, *Pipeline Engineering* covers the essential aspects and types of pipeline engineering in a single volume. This work is divided into two parts. Part I, *Pipe Flows*, delivers an integrated treatment of all variants of pipe flow including incompressible and compressible, Newtonian and non-Newtonian, slurry and multiphase flows, capsule flows, and pneumatic transport of solids. Part II, *Engineering Considerations*, summarizes the equipment and methods required for successful planning, design, construction, operation, and maintenance of pipelines. By addressing the fundamentals of pipeline engineering-concepts, theories, equations, and facts-this groundbreaking text identifies the cornerstones of the discipline, providing engineers with a springboard to success in the field. It is a must-read for all pipeline engineers.

IMPLEMENTASI GOOD CORPORATE GOVERNANCE PADA PDAM TERKAIT DENGAN FUNGSI PELAYANAN PUBLIK H.

Tamrin Muchsin, S.IP, MH, 2025-01-30 Air merupakan bahan alam yang diperlukan untuk kehidupan manusia, hewan dan tanaman yaitu sebagai media pengangkutan zat-zat makanan, juga merupakan sumber energi serta berbagai keperluan lainnya (Arsyad, 1989).1 Air untuk konsumsi sehari-hari masyarakat sebagian besar berasal dari air tanah. Peningkatan pemanfaatan sumber daya air tanah di kota-kota besar di Indonesia telah melampaui batas kemampuan cadangan air tanah itu sendiri. Ditambah dengan keterbatasan pelayanan air bersih oleh Pemerintah yang sangat terbatas dan belum dapat menjangkau seluruh kebutuhan air domestik bagi masyarakat, telah mendorong pengambilan air tanah secara tidak terkontrol. Akibatnya di pusat-pusat pengambilan air tanah terjadi degradasi kuantitas, kualitas dan bahkan lingkungan air tanah secara signifikan

International Sale of Goods Nicolas Nord, Gustavo Cerqueira, 2017-04-26 This book provides an in-depth study of Private International Law reasoning in the field of international sale of goods contracts. It connects the dots between European and Chinese law and offers an unprecedented transversal and comparative legal study on the matter. Its main purpose is to identify the consequences of European rules on Chinese companies and vice versa. The first part addresses the

conflict of jurisdiction and conflict of law rules, while the second part discusses in detail the practical importance and the impact of arbitration, which is becoming more common thanks to its flexibility. The third part focuses on the Vienna Convention on Contracts for the International Sale of Goods and the Unidroit Principles of International Commercial Contracts and carefully analyses their use. The final part examines contracts involving consumers.

Marine and Offshore Corrosion Kenneth A Chandler, 2014-05-12 *Marine and Offshore Corrosion* describes the principles of effective corrosion control treatments in marine environments, with emphasis on economic solutions to corrosion. The book explains chemical or electrochemical reaction of an alloy with its environment leading to corrosion, and mechanical loss of the metal by erosion, abrasion, or wear resulting also in corrosion. A main consideration of erosion control that the engineer should look into is the economic side. Other considerations that he should investigate are the strength of a structure, time for construction, availability of materials, and costs. The book also discusses the marine environment consisting of sea water, temperature fluctuations, dissolved gases, hydrogen sulphide, ammonia, carbon dioxide, electrical conductivity, fouling. The text describes the selection of materials to be used in marine environments, surface preparation of steel before painting, the type of paint, and metallic coatings. Some of the factors in selecting coating systems are: cost and estimated life before the first scheduled maintenance, adhesion properties, moisture tolerance, elasticity, chemical resistance, impact resistance, bacterial resistance. The factors affecting maintenance include environmental conditions, quality of initial protection applied, type of structure, as well as the design and purpose of the structure. The book has been prepared for engineers and designers who are not corrosion specialists but have to deal with marine corrosion problems as part of their day-to-day professional activities. The text will also turn out to be useful for engineers with general interest in structure, building, or machinery maintenance specially those located near coastal areas.

Coatings Tribology K. Holmberg,A. Matthews,1994-07-15 This book presents a general view on thin surface coatings used for tribological applications and it is based on the current state of understanding. The mechanisms of friction and wear in sliding and rolling contacts of coated surfaces are described. Basic information on coating techniques, tribology and surface mechanisms is given. Based on collected experimental works information is given on the properties of thin soft coatings, such as polymer, lamellar solid and soft metal coatings; thin hard coatings, such as nitride, carbide, oxide, boride and diamond and diamond-like coatings; and multi-component and multi-layer coatings. The influence of interface layers and lubricants is highlighted. The methods available for characterization of coated surfaces and for mechanical and chemical evaluation of their tribological properties are described. Tribological evaluation methods for accelerated and field testing and the need for standardization of quality assurance procedures are discussed. A methodology for the selection of thin coatings for tribological applications is presented and knowledge based expert system approaches for coating selection are reviewed. For different application examples, the basic tribological contact mechanisms are described and the possibilities for improving their tribological properties by using surface coatings are discussed. The application examples include sliding and rolling bearings, gears, tools for cutting and forming, erosion resistant applications, magnetic recording systems and bio-medical implants.

Engineering Materials 2 Michael F. Ashby,D.R.H. Jones,2014-06-28 Provides a thorough explanation of the basic properties of materials; of how these can be controlled by processing; of how materials are formed, joined and finished; and of the chain of reasoning that leads to a successful choice of material for a particular application. The materials covered are grouped into four classes: metals, ceramics, polymers and composites. Each class is studied in turn, identifying the families of materials in the class, the microstructural features, the processes or treatments used to obtain a particular structure and their design applications. The text is supplemented by practical case studies and example problems with answers, and a valuable programmed learning course on phase diagrams.
