

The Bamboo Architecture Design With Nature

Vo Trong Nghia, Susan Wise Bauer

New Bamboo Marcelo Villegas, 2003 *Bambusa guadua*, the tropical giant bamboo, is the most versatile, reliable architectural material of its native mountainous regions. Bamboo's delightful exterior and exotic reputation obscures its oaklike strength. 'New Bamboo' is a colour portfolio of contemporary structures and decorative designs demonstrating the appeal of building with natural materials for the modern eye. Properly treated, bamboo is as reliable as prime-grade hardwoods, beautiful in its own right, and suitable for commercial and residential structures in any climate. This is an anthology of bamboo construction by different experts: an agronomist, architects, a designer, and a builder, that showcases projects in Mexico, Brazil, Ecuador, Panama, and Colombia, where this product has been used as a traditional construction material for centuries. Also covered are France and Germany, where architects are discovering the delights of working with bamboo. *Guadua* is beautiful but not so delicate that it cannot be used in commercial structures like the auditorium-size pavilion built for the Hannover Expo 2000. Here are delightful details and rugged outbuildings that show bamboo as a most natural design element.

Vo Trong Nghia: Building Nature Vo Trong Nghia, Susan Wise Bauer, 2022-04-19 A career-spanning monograph in two volumes presenting the work of one of Asia's most progressive and innovative architects Vo Trong Nghia. The work of Vo Trong Nghia is a call for architecture to transform itself from a source of pollution to a reason for hope. The World Green Building Council estimates that thirty-nine percent of energy-related carbon emissions can be attributed to buildings. An awareness of architecture's responsibilities has permeated the profession and new ideas and solutions are coming from places where these issues are most acute. Following a long recovery from decades of war, Vietnam has emerged as one of the most exciting centers of design in Asia—led largely by the work of architect Vo Trong Nghia, whose work has gained an international following. The buildings of Vo Trong Nghia Architects, established in Ho Chi Minh City in 2006, make clear reference to the past, and to Vo's own adherence to the Five Precepts of Buddhist teaching. The architect's two main themes—green architecture and bamboo as a building material—form the basis of this two-volume celebration of his work. From the Wind and Water Bar, his first foray into bamboo as a building material, to resort complexes, art installations, and his game-changing series of residences, House for Trees, *Vo Trong Nghia: Building Nature* proves that green architecture creates local relevance, beauty, and elegance in its own right.

Bamboo Architecture Unboxed Jorg Stamm,Munir Vahanvati,2024-04-15 Bamboo Architecture Unboxed is a comprehensive guide that bridges traditional craftsmanship with contemporary design techniques to revolutionise the bamboo construction landscape. Authored by experts Jorg Stamm and Munir Vahanvati, this book explores the remarkable strength, sustainability, and aesthetic flexibility of bamboo through geometrical principles. Readers are taken on an enlightening journey from the foundational elements of bamboo design to intricate architectural forms inspired by nature. Key geometries such as hyperbolic paraboloids, hyperboloids, tetrahedrons, and geodesic domes are meticulously demystified, offering a blend of historical context, vivid imagery, practical wisdom, and step-by-step construction guides. Whether you're an architect, builder, or enthusiast of sustainable materials, Bamboo Architecture Unboxed unfolds as a transformative narrative, inviting you to push creative boundaries and shape a future where eco-conscious constructions and organic silhouettes form the core of our built environment.

Bamboo Architecture Vladimir Belogolovsky,2021-02-28 From the world's leading publisher of Architecture and Architectural Practices, comes a look into how VTN Architects have used bamboo to create groundbreaking projects. With the climate crisis raging and awareness of humanity's detrimental impact on the environment now patently apparent, the need for architects to come up with sustainable new solution has never been more pressing. A key part of any green approach to architecture is the use of local natural materials with a low environmental impact. Bamboo, which has been widely used in Asian architecture for centuries as scaffolding and for bridges, pavilions, houses and other structures, is an ideal material in this context: lightweight, strong and readily available. In an effort to meet the challengers of the 21st century, VTN Architects has developed new ways of working with two species of bamboo in particular, the flexible Tam Vong and the sturdier Luong, creating a manufacturing workflow that allows for the production of standardised modules, a knitting technique that enables the material to span large distances and environmentally friendly traditional treatments such as mud-soaking and smoking. In Bamboo Architecture, we see how these methods have been applied in award-winning, groundbreaking projects such as the Wind and Water Café, Diamond Island Community enter, and the majestic Vedana Restaurant, alongside an illuminating introduction by Masaaki Iwamoto and an interview with the studio principal Vo Trong Nghia who offers an inspiring vision for the future of natural, green architecture.

Building with Bamboo Gernot Minke,2016-06-06 Although traditionally a building material of the warmer climate zones, bamboo is becoming increasingly popular amongst architects in the northern hemisphere; bamboo has several advantages – it is very stable, of low weight, and highly elastic, in addition to being readily available as well as renewable. The applications of bamboo in architecture have become significantly wider and diversified, so that today, even structures with large spans – such as bridges – are built with this material. The new and revised second edition of this manual provides a practical, systematic overview of the numerous potential applications and processing methods of this renewable material. The

comprehensive presentation of groundbreaking bamboo buildings has been updated with more recent projects.

Natural Architecture Now Francesca Tatarella, 2014-08-19 Our 2007 hit *Natural Architecture* introduced artists and architects who transform the act of building into a fascinating new art form. Built from humble elements—branches, twigs, straw, bamboo—and fulfilling a wide variety of intentions—sometimes structural, sometimes sculptural, sometimes sacred—their fantastical creations resonate with an innate natural beauty. *Natural Architecture Now* features all-new site-specific installations by an international list of contributors. From an engineered oasis and climbing structure in Joshua Tree National Park to an intricate bamboo installation on top of the Metropolitan Museum of Art to a residential mud structure prototype created by Architecture for Humanity Tehran, each project points a way forward for architects to engineer a new organic simplicity of structure and form.

Biomimicry in Architecture Michael Pawlyn, 2019-08-12 When searching for genuinely sustainable building design and technology - designs that go beyond conventional sustainability to be truly restorative - we often find that nature got there first. Over 3.5 billion years of natural history have evolved innumerable examples of forms, systems, and processes that can be applied to modern green design. For architects, urban designers and product designers, this new edition of *Biomimicry in Architecture* looks to the natural world to achieve radical increases in resource efficiency. Packed with case studies predicting future trends, this edition also contains updated and expanded chapters on structures, materials, waste, water, thermal control and energy, as well as an all-new chapter on light. An amazing sourcebook of extraordinary design solutions, *Biomimicry in Architecture* is a must-read for anyone preparing for the challenges of building a sustainable and restorative future.

Co-building with bamboo Munir Vahanvati, Mittul Vahanvati, 2015-09-12 *Co-building with Bamboo* was published to celebrate 10 years of building with bamboo. It provides an insight into Giant Grass's evolution from exploring bamboo as a sustainable material to using participatory design and construction approach to empower the community.

Application of Bamboo in Building Envelope Zujian Huang, 2019-05-14 This book offers a comprehensive overview of the use of bamboo in building industry. Nature-Based Design in Landscape Architecture Bruce Sharky, 2024-02-28 *Nature-Based Design in Landscape Architecture* showcases a range of built works designed by landscape architects from many countries of the world representing diverse environmental regions and uses. These projects demonstrate the transformative potential of a nature-based approach to landscape architecture. The nature-based design approach supports and encourages natural regeneration with a view to promoting sustainable environments, preserving natural resources, and mitigating the impacts of climate change and development. The projects selected for this book demonstrate the potential of nature-based landscape design to support healthy, natural and managed ecosystems, sequester carbon, and support the recovery of biodiversity. In addition to examples of design-led environmental interventions, *Nature-Based Design in Landscape Architecture*, the book, also demonstrates the potential for nature-based design to improve people's relationship with their surroundings by encouraging them to be active participants in their communities. As such, each project featured in the book promotes a discussion around future scenarios in which landscape architects can and will be engaged, from minimizing environmental impact through sustainable design to fostering social justice through community engagement. This book will be a welcome supplement for undergraduate landscape architecture, survey or design studio courses, and may also be used at the master's degree level either as part of a landscape architecture survey seminar or early design studio.

Booming Bamboo Pablo van der Lugt, 2017-12 'Booming Bamboo' provides a comprehensive overview of the enormous potential of this sustainable resource. Not only for architecture and design but also for a multitude of other applications. After covering the bamboo basics (growth, properties, cultural history, industrialisation), the first part of the book introduces the many benefits of bamboo as a fast-growing, renewable resource. Bamboo Architecture & Design Chris van Uffelen, 2014-01-07 Bamboo has been used as building material for many centuries in all regions in which it grows, especially in Asia, Africa and South America. Today it is gaining in popularity also among Western architects and engineers due to its reputation of a quickly replenishing and therefore sustainable raw material. In addition, its tensile as well as compressive strength, which can compete with those of steel, stone and concrete, make bamboo a very desirable construction material. The range extends from traditional building styles and their modern interpretation to the combination of bamboo with other materials. Frequently, beyond its use for purely construction purposes it also serves as a primary design element. This volume presents contemporary projects that show the impressive

versatility of its usage--Provided by publisher.

Bamboo Esther Titilayo Akinlabi, Kwame Anane-Fenin, Damenortey Richard Akwada, 2017-07-24 This book is intended for use both in the industry and the academia. It introduces the physical, chemical and the mechanical properties as well as the characterization of bamboo. Novel industrial applications in structural, non-structural, reinforcement, afforestation, land reclamation, environmental significance, textile, medical, geotechnical, hydraulic, food, pulp and the paper industries are addressed in detail. Bamboo has been used for centuries as a structural material as well as in diverse engineering applications, food and medicinal purposes, especially in Asia. As a natural fiber composite, bamboo has the potential for many developments in academic and industrial research. Current literature on composites tends to focus on bamboo as a plant or solely as a structural engineering material. This book seeks to bring together these two extremes and provides a holistic resource on the subject.

The Barefoot Architect Johan van Lengen, 2008 A former UN worker and prominent architect, Johan van Lengen has seen firsthand the desperate need for a greener approach to housing in impoverished tropical climates. This comprehensive book clearly explains every aspect of this endeavor, including design (siting, orientation, climate consideration), materials (sisal, cactus, bamboo, earth), and implementation. The author emphasizes throughout the book what is inexpensive and sustainable. Included are sections discussing urban planning, small-scale energy production, cleaning and storing drinking water, and dealing with septic waste, and all information is applied to three distinct tropical regions: humid areas, temperate areas, and desert climates. Hundreds of explanatory drawings by van Lengen allow even novice builders to get started.

2019 International Bamboo Construction Competition Kewei Liu, Cristoforo Demartino, Zhi Li, Qinghui Liu, Yan Xiao, 2022-03-09 This volume builds upon the 2019 International Bamboo Construction Competition (IBCC 2019) from the Concepts to the Realized Pavilions. Several designed projects are described, and particular attention is devoted to the realized prototypes. It also presents the Bamboo Eye, an important example of architecture realized by INBAR for the 2019 Beijing Horticultural Expo. As such, the volume provides an overview of the use of bamboo poles and engineered bamboo products for temporary and normal constructions, and represents a compact review of the applications of bamboo poles and/or engineered bamboo products in the construction industry. This book will be of interest for researchers, architects and structural engineers in field of bamboo constructions.

Nature Matilda McQuaid, Hans Gubbels, Gene Bertrand, 2019 An exploration of the ways in which designers are striving to transform our relationship with the natural world. Designers today are striving to transform our relationship with the natural world. While the modern industrial age gave way to designs that vastly improved human enterprise through technology, there were unintended and destructive consequences for the environment. Humans are intrinsically linked to nature yet our actions have frayed this relationship, forcing designers to think more intentionally and to consider the impact of every design decision, from an artifact's manufacture and use to its obsolescence. Designers are aligning with biologists, engineers, agriculturists, environmentalists and many other disciplines to design a more harmonious and regenerative future. Based on these new partnerships, designers are asking different questions and anticipating future challenges, which not only change the design process, but also what design means. Nature: Collaborations in Design includes over sixty-five international projects from the fields of architecture, product design, landscape design, fashion, interactive and communication design, and material research. More than 300 compelling and exquisite photographs, illustrations and content from data visualizations illustrate seven essays, which explain and explore designers' strategies around understanding, simulating, salvaging, facilitating, augmenting, remediating and nurturing nature. Four conversations between scientists and designers delve into topics related to synthetic biology, scientific versus design lexicon, and recent

shifts in the meaning of nature with a glossary illuminating scientific, technological and theoretical concepts and processes invoked by the designers.
