Operations Management David A. Collier, James Robert Evans, 2007 This exciting new textbook provides exceptional coverage of the essential topics taught in a modern operations management course. Its highly current coverage includes contemporary and relevant service theory and applications. Appropriate manufacturing applications and theory are included where relevant. The book's modern/strategic approach addresses OM from a cross-functional perspective, which views operations as linked to all other functional areas of an organization, such as marketing and finance. The strategic approach takes into consideration the integration of technology and how it changes the way a firm operates. Recognition of this

current trend is the main differentiating factor for this Collier/Evans text. The book provides equal coverage of manufacturing and services theory and applications, while placing an emphasis on the integration of the value chain.

Renovating for Working Cristina Paredes,2008 Office design has experienced dramatic changes in recent years. Technological advances have led to new ways of working and, naturally, the design of work spaces has been adapted to today's trends. This volume presents a wide variety of projects with one characteristic in common: they are all spaces

transformed into work places. The projects are accompanied by floor plans and references to the previous constructions. As well as buildings transformed into offices, there are also small spaces used by self-employed workers. These projects revise ideas related to the efficient use of space: new needs, the change in the use of rooms, the creation and use of communal areas, etc. The originality and inventiveness of the projects demonstrates that established rules do not need to be followed when finding solutions to the most common problems.
