Illicit Love Ann McGrath,2015-12-01 Wedding New Worlds revises histories of interracial love, sex, and marriage amid legal and cultural barriers created to regulate and make illegal the liaisons between indigenous and non-indigenous people in Australia and the US from the late 18th century to the 20th century--

Red Letter Christians Tony Campolo,2011-01-01 In today's political environment, who speaks for whom is not always clear. Over the past couple of decades, evangelical Christians have tended to be associated with the religious right and the most conservative positions of the Republican Party. Rebelling against this designation are those who prefer to be called Red Letter Christians, desiring to live out Jesus's words in the New Testament. Believing that Jesus is neither a Republican nor a Democrat, Red Letter Christians want to jumpstart a religious movement that will transcend partisan politics and concentrate on issues such as fighting poverty, caring for the environment, advancing peace, promoting strong families, and supporting a consistent ethic of life, all viewed as critical moral and biblical values. Into this arena of thought steps Tony Campolo, the powerful evangelist known for his passionate and prophetic sharing of the radical message of Jesus. In this book, Campolo examines many of the hot-button issues facing evangelicals from the perspective of Jesus's red-letter words in the Bible. No matter where you fall on the political spectrum, Campolo will make you think, pray, and act.

Halliburton's Army Pratap Chatterjee,2010-03-23 Halliburton's Army is the first book to show, in shocking detail, how Halliburton really does business, in Iraq, and around the world. From its vital role as the logistical backbone of the U.S. occupation in Iraq—without Halliburton there could be no war or occupation—to its role in covering up gang-rape amongst its personnel in Baghdad, Halliburton's Army is a devastating bestiary of corporate malfeasance and political cronyism. Pratap Chatterjee—one of the world's leading authorities on corporate crime, fraud, and corruption—shows how Halliburton won and then lost its contracts in Iraq, what Dick Cheney and Donald Rumsfeld did for it, and who the company paid off in

the U.S. Congress. He brings us inside the Pentagon meetings, where Cheney and Rumsfeld made the decision to send Halliburton to Iraq—as well as many other hot-spots, including Somalia, Yugoslavia, Uzbekistan, Afghanistan, Guantánamo Bay, and, most recently, New Orleans. He travels to Dubai, where Halliburton has recently moved its headquarters, and exposes the company’s freewheeling ways: executives leading the high life, bribes, graft, skimming, offshore subsidiaries, and the whole arsenal of fraud. Finally, Chatterjee reveals the human costs of the privatization of American military affairs, which is sustained almost entirely by low-paid unskilled Third World workers who work in incredibly dangerous conditions without any labor protection. Halliburton’s Army is a hair-raising exposé of one of the world’s most lethal corporations, essential reading for anyone concerned about the nexus of private companies, government, and war.

Processing of Heavy Crude Oils Ramasamy Marappa Gounder, 2019 Unconventional heavy crude oils are replacing the conventional light crude oils slowly but steadily as a major energy source. Heavy crude oils are cheaper and present an opportunity to the refiners to process them with higher profit margins. However, the unfavourable characteristics of heavy crude oils such as high viscosity, low API gravity, low H/C ratio, chemical complexity with high asphaltenes content, high acidity, high sulfur and increased level of metal and heteroatom impurities impede extraction, pumping, transportation and processing. Very poor mobility of the heavy oils, due to very high viscosities, significantly affects production and transportation. Techniques for viscosity reduction, drag reduction and in-situ upgrading of the crude oil to improve the flow characteristics in pipelines are presented in this book. The heavier and complex molecules of asphaltenes with low H/C ratios present many technological challenges during the refining of the crude oil, such as heavy coking on catalysts. Hydrogen addition and carbon removal are the two approaches used to improve the recovery of value-added products such as gasoline and diesel. In addition, the heavy crude oil needs pre-treatment to remove the high levels of impurities before the crude oil can be refined. This book introduces the major challenges and some of the methods to overcome them.

NMR Logging Principles and Applications George R. Coates, 1999 Dick Cheney, former Halliburton CEO, writes in the foreword: NMR logging represents a new revolution in formation evaluation with wireline logging, and this book gives a comprehensive treatment of this new technology... Besides explaining basic NMR principles and applications, this book provides an understanding of these latest achievements in NMR logging. When NUMAR introduced its MRIL logging service in 1992, it caused a revolution in the petroleum industry by making possible the systematic estimation of permeability, previously an impossibility. Permeability, however, was not the only petrophysical benefit provided by this new technology. Mineral-independent total porosity, water, gas and oil saturation, and oil viscosity have all been found achievable through the use of this revolutionary new logging technology. Introduces revolutionary new well logging technology Developed by Halliburton, one of the premier well servicing companies in the world Shows how to incorporate this new technology into other well logging principles

Marvelous Possessions Stephen Greenblatt, 2008-11-26 *Marvelous Possessions* is a study of the ways in which Europeans of the late Middle Ages and the early modern period represented non-European peoples and took possession of their lands, in particular the New World. In a series of innovative readings of travel narratives, judicial documents, and official reports, Stephen Greenblatt shows that the experience of the marvelous, central to both art and philosophy, was cunningly yoked by Columbus and others to the service of colonial appropriation. He argues that the traditional symbolic actions and legal rituals through which European sovereignty was asserted were strained to the breaking point by the unprecedented nature of the discovery of the New World. But the book also shows that the experience of the marvelous is not necessarily an agent of empire: in writers as different as Herodotus, Jean de Léry, and Montaigne—and notably in Mandeville's *Travels*, the most popular travel book of the Middle Ages—wonder is a sign of a remarkably tolerant recognition of cultural difference. *Marvelous Possession* is not only a collection of the odd and exotic through which Stephen Greenblatt powerfully conveys a sense of the marvelous, but also a highly original extension of his thinking on a subject that has occupied him throughout his career. The book reaches back to the ancient Greeks and forward to the present to ask how it is possible, in a time of disorientation, hatred of the other, and possessiveness, to keep the capacity for wonder from being poisoned? A marvellous book. It is also a compelling and a powerful one. Nothing so original has ever been written on European responses to 'The wonder of the New World.'—Anthony Pagden, *Times Literary Supplement* By far the most intellectually gripping and penetrating discussion of the relationship between intruders and natives is provided by Stephen Greenblatt's *Marvelous Possessions*.—Simon Schama, *The New Republic* For the most engaging and illuminating perspective of all, read *Marvelous Possessions*.—Laura Shapiro, *Newsweek*

American Bonds Sarah L. Quinn, 2021-08-10 How the American government has long used financial credit programs to create economic opportunities Federal housing finance policy and mortgage-backed securities have gained widespread

attention in recent years because of the 2008 financial crisis, but issues of government credit have been part of American life since the nation's founding. From the 1780s, when a watershed national land credit policy was established, to the postwar foundations of our current housing finance system, *American Bonds* examines the evolution of securitization and federal credit programs. Sarah Quinn shows that since the Westward expansion, the U.S. government has used financial markets to manage America's complex social divides, and politicians and officials across the political spectrum have turned to land sales, home ownership, and credit to provide economic opportunity without the appearance of market intervention or direct wealth redistribution. Highly technical systems, securitization, and credit programs have been fundamental to how Americans determined what they could and should owe one another. Over time, government officials embraced credit as a political tool that allowed them to navigate an increasingly complex and fractured political system, affirming the government's role as a consequential and creative market participant. Neither intermittent nor marginal, credit programs supported the growth of powerful industries, from railroads and farms to housing and finance; have been used for disaster relief, foreign policy, and military efforts; and were promoters of amortized mortgages, lending abroad, venture capital investment, and mortgage securitization. Illuminating America's market-heavy social policies, *American Bonds* illustrates how political institutions became involved in the nation's lending practices.

Environmental Protection and Transitions from Conflict to Peace Carsten Stahn, Jens Iverson, Jennifer S.

Easterday, 2017-10-13 This is an open access title available under the terms of a CC BY-NC-ND 4.0 International licence. It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations. Environmental protection is fundamental for the establishment of sustainable peace. Applying traditional legal approaches to protection raises particular challenges during the transition from conflict to peace. In the jus post bellum context, protection of the environment and natural resources needs to be considered in tandem with a broad range of simultaneously applicable normative frameworks, such as human rights, transitional justice, arms control/disarmament, UN law and practice, development, and domestic law. While certain multilateral environment agreements, such as the Convention Concerning the Protection of the World Cultural and Natural Heritage protect the environment; international humanitarian law and international criminal law continue to treat environmental protection largely from an anthropocentric perspective. This book is the first targeted work in the legal literature that investigates environmental challenges in the aftermath of conflict. Addressing these challenges, it brings together academics, policy-makers, and practitioners from different disciplines to clarify policies and practices of environmental protection and key normative frameworks. It draws on experiences and practices in post-conflict settings to specify substantive principles and techniques to remedy and prevent harm.

What is Slavery? Brenda E. Stevenson, 2015-08-06 What is slavery? It seems a simple enough question. Despite the long history of the institution and its widespread use around the globe, many people still largely associate slavery, outside of the

biblical references in the Old Testament, to the enslavement of Africans in America, particularly the United States. Slavery proved to be essential to the creation of the young nation's agricultural and industrial economies and profoundly shaped its political and cultural landscapes, even until today. *What Is Slavery?* focuses on the experience of enslaved black people in the United States from its early colonial period to the dawn of that destructive war that was as much about slavery as anything else. The book begins with a survey of slavery across time and place, from the ancient world to the beginning of the Atlantic slave trade and then describes the commerce in black laborers that ushered in market globalization and brought more than 12 million Africans to the Americas, before finally examining slavery in law and practice. For those who are looking for a concise and comprehensive treatment of such topics as slave labor, culture, resistance, family and gender relations, the domestic slave trade, the regionalization of the institution in the expanding southern and southwestern frontiers, and escalating abolitionist and proslavery advocacies, this book will be essential reading.

Exploration and Production of Oceanic Natural Gas Hydrate Michael D. Max, Arthur H. Johnson, 2016-08-16 This book describes aspects of the natural gas hydrate (NGH) system that offer opportunities for the innovative application of existing technology and development of new technology that could dramatically lower the cost of NGH exploration and production. It is written for energy industry professionals and those concerned with energy choices and efficiencies at a university graduate level. The NGH resource is compared with physical, environmental, and commercial aspects of other gas resources. The authors' theme is that natural gas can provide for base and peak load energy demands during the transition to and possibly within a renewable energy future. This is possibly the most useful book discussing fossil fuels that will be a reference for environmentalists and energy policy institutions, and for the environmental and energy community.

The Economics of War Imad A. Moosa, 2019-12-27 Bad things occur and persist because of the presence of powerful beneficiaries. In this provocative and illuminating book, Imad Moosa illustrates the economic motivations behind the last 100 years of international conflict, citing the numerous powerful individual and corporate war profiteers that benefit from war.

[Foundations of International Relations](#), 2022-03-10 An engaging introduction to the core concepts, theories, actors and issues in global politics. Featuring a combination of chapters authored by leading scholars, researchers and practitioners from around the world, this textbook takes into account the historical development of international relations and the web of dynamics that forms the subject, resulting in a clear analysis of the field from a variety of perspectives. Chapters cover topics including race, colonialism, gender, sexuality, digital globalization, the environment and security studies and are supported by a range of case studies, key boxes and illustrative material to aid students in their practical application of theoretical ideas. The book is also complimented by a bespoke curated website, featuring a regularly updated collection of interactive learning material and hosted on E-International Relations, the world's leading open access IR website. Portraying the most compelling issues of our time, and presenting the necessary tools to analyse and debate the subject, this is an invaluable

resource for anyone studying international relations.

Environmental Impacts of Hydraulic Fracturing Frank R. Spellman, 2012-09-17 There is a strong need for innovation and the development of viable renewable energy sources. Recent technological advances now allow natural gas supplies- previously believed inaccessible or nonexistent-to be discovered, mined, and processed for both industrial and consumer use. The technology, a controversial process that is alternatively called h

Fair Trade for All Joseph E. Stiglitz, Andrew Charlton, 2007-09-17 Winner of the Nobel Prize in Economics and author of the New York Times bestselling book *Globalization and Its Discontents*, Joseph E. Stiglitz here joins with fellow economist Andrew Charlton to offer a challenging and controversial argument about how globalization can actually help Third World countries to develop and prosper. In *Fair Trade For All*, Stiglitz and Charlton address one of the key issues facing world leaders today--how can the poorer countries of the world be helped to help themselves through freer, fairer trade? To answer this question, the authors put forward a radical and realistic new model for managing trading relationships between the richest and the poorest countries. Their approach is designed to open up markets in the interests of all nations and not just the most powerful economies, to ensure that trade promotes development, and to minimize the costs of adjustments. The book illuminates the reforms and principles upon which a successful settlement must be based. Vividly written, highly topical, and packed with insightful analyses, *Fair Trade For All* offers a radical new solution to the problems of world trade. It is a must read for anyone interested in globalization and development in the Third World.

Understanding Oil and Gas Shows and Seals in the Search for Hydrocarbons John Dolson, 2016-06-15 This book explains in detail how to use oil and gas show information to find hydrocarbons. It covers the basics of exploration methodologies, drilling and mud systems, cuttings and mud gas show evaluation, fundamental log analysis, the pitfalls of log-calculated water saturations, and a complete overview of the use of pressures to understand traps and migration, hydrodynamics, and seal and reservoir quantification using capillary pressure. Also included are techniques for quickly generating pseudo-capillary pressure curves from simple porosity/permeability data, with examples of how to build spreadsheets in Excel, and a complete treatment of fluid inclusion analysis and fluid inclusion stratigraphy to map migration pathways. In addition, petroleum systems modeling and fundamental source rock geochemistry are discussed in depth, particularly in the context of unconventional source rock evaluation and screening tools for entering new plays. The book is heavily illustrated with numerous examples and case histories from the author's 37 years of exploration experience. The topics covered in this book will give any young geoscientist a quick start on a successful career and serve as a refresher for the more experienced explorer.

Fear Itself, 2010-01-01 What are fear, horror, and terror? This question, central to our endeavour, cannot be answered by one unified voice. It always cracks, falters, and fades before it can fully enunciate its proclamation. We, the authors, know

this and have planned accordingly. This volume presents meditations on this issue springing from the four corners of intellectual inquiry. Each author provides a distinctive approach with which to address the issue at hand. Literary theory, psychoanalysis, media studies, political science, and many more disciplines occupy the same space between the covers of this book. We hope that through the cacophony of our diversity we will fill in the inevitable gaps when our voices fall short.
