**Enforcement Requirements for High-occupancy Vehicle Facilities** N. Craig Miller, Robert B. Deuser, 1978

Enforcement of high-occupancy vehicle (HOV) traffic restrictions forms an integral and sometimes critical element of HOV preferential treatment projects. This research (1) reviewed enforcement on HOV facilities, (2) identified effective HOV enforcement techniques, (3) developed model legislation for effective HOV enforcement and (4) prepared HOV enforcement guidelines. This report presents the findings of this research. Sixteen projects in the United States encompassing each type of freeway and arterial treatment, were visited to gain in-depth operational and enforcement data on each project.

**Traffic Control for High Occupancy Vehicle Facilities in Virginia** Catherine C. McGhee, 1998 High occupancy vehicle (HOV) facilities are an important tool in relieving the congestion that continues to build on many urban roadways. By moving more people in fewer vehicles, the existing infrastructure can be used more efficiently. Operating HOV lanes is not a simple matter however. HOV lanes can be controversial, and the task of making them comprehensible and easy to use is not insignificant. Recognizing the importance of signing and pavement marking strategies on the success of HOV implementation, the Traffic Engineering Division of the Virginia Department of Transportation requested a study of Virginia's HOV facility traffic control strategies. The study includes a literature review of signing and pavement marking for special use lanes, a survey of several states with active HOV programs, and a review of the HOV facilities in Virginia. The literature suggests that the majority of motorists do understand the meaning of the term HOV as well as the use of the diamond symbol that indicates an HOV lane. Motorist confusion occurs when HOV regulations are not consistent across a region, however. Varying the hours of operation or minimum vehicle occupancy increases the signing requirements and places a greater burden on motorists. HOV signs must be clear and state relevant restrictions on use. In addition, other efforts should be undertaken to educate motorists about HOV benefits and requirements for use. Enforcement is critical to the success of HOV programs and should be a coordinated effort between the Department of Transportation and the enforcement agencies.

**The Earthscan Reader on World Transport Policy and Practice** John Whitelegg, Gary Haq, 2017-09-05 Transport is now a critical problem throughout the world, and it is set to get worse. Whether it is traffic congestion, crashes (10 million killed and injured each year), noise, air pollution, landscape destruction, or greenhouse gas emissions (of which transport is the fastest-growing source), the damage and the costs from our current forms of transport are dangerously high and getting worse. Policies and practical measures that can reduce and eliminate these problems are urgently needed. This Reader contains 16 important contributions on how to improve transport globally. They are based on sound science, sound people-centred analysis, and a strong awareness of equity and human rights. And they have been selected for their originality, the importance of the issues they focus on, the quality of their insight and their practical relevance. A further 7 commissioned chapters provide informative overviews of the transport problems specific to each region of the world, while the editors' Introduction and Conclusion frames the discussion and lays out the scale of the challenges we face. As a whole, the Reader demonstrates what steps can be taken to improve both transport provision and use, in both the developed and the developing world, while reducing environmental and health impacts. It will serve as an invaluable sourcebook for anyone researching or attempting to address the issues associated with world transport policy and practice, whether students, planners, business people or policy-makers.
