Gareth Leng, Rhodri Ivor Leng

Understanding Nursing Research Carol Leslie Macnee, Susan McCabe (RN.), 2008 This textbook explicitly links understanding of nursing research with evidence-based practice, and focuses on how to read, critique, and utilize research reports. Organized around questions students have when reading reports—how the conclusions were reached, what types of patients the conclusions apply to, how the study was done, and why it was done that way—the text explains the steps of the research process to answer these questions. Chapters include clinical vignettes, highlighted key concepts, and out-of-class exercises. Appendices present a variety of research examples. This edition includes significant new material on evidence-based practice and more distinction between qualitative and quantitative research.

Recognition and Alleviation of Distress in Laboratory Animals National Research Council, Division on Earth and Life Studies, Institute for Laboratory Animal Research, Committee on Recognition and Alleviation of Distress in Laboratory Animals, 2008-04-10 Scientific advances in our understanding of animal physiology and behavior often require theories to be revised and standards of practice to be updated to improve laboratory animal welfare. This new book from the Institute for Laboratory Animal Research (ILAR) at the National Research Council, *Recognition and Alleviation of Distress in Laboratory Animals*, focuses on the stress and distress which is experienced by animals when used in laboratory research. This book aims to educate laboratory animal veterinarians; students, researchers, and investigators; animal care staff, as well as animal welfare officers on the current scientific and ethical issues associated with stress and distress in laboratory animals. It evaluates pertinent scientific literature to generate practical and pragmatic guidelines. *Recognition and Alleviation of Distress in Laboratory Animals* focuses specifically on the scientific understanding of the causes and the functions of stress and distress, the transformation of stress to distress, and the identification of principles for the recognition and alleviation of distress. This book discusses the role of humane endpoints in situations of distress and principles for the minimization of distress in laboratory animals. It also identifies areas in which further scientific investigation is needed to improve laboratory animal welfare in order to adhere to scientific and ethical principles that promote humane care and practice.

Vertebrate Ecophysiology Don Bradshaw, 2003-04-24 Ecophysiology attempts to clarify the role and importance of physiological processes, such as digestion and respiration, in the ecological relations of species in their natural habitats. The basic principles and methods that are central to any ecophysiological study are outlined and discussed, including animal capture, blood collection, and the measurement of plasma components and hormone levels. Attention is paid to animal welfare and ethical considerations, and the question of stress and how to identify its presence in animals in their natural environment is approached through a series of case studies. Examples are given from a wide range of vertebrates living in deserts, cold climates and oceans, and recent findings on the physiological adaptations of Antarctic birds and mammals are a

highlight of the book. This textbook will provide an introduction to the study of ecophysiology for advanced undergraduates and postgraduate students, as well as researchers in ecology, biodiversity and conservation.

Building a Resilient Workforce Institute of Medicine, Board on Health Sciences Policy, Planning Committee on Workforce Resiliency Programs, 2012-07-18 Every job can lead to stress. How people cope with that stress can be influenced by many factors. The Department of Homeland Security (DHS) employs a diverse staff that includes emergency responders, border patrol agents, federal air marshals, and policy analysts. These employees may be exposed to traumatic situations and disturbing information as part of their jobs. DHS is concerned that long-term exposure to stressors may reduce individual resilience, negatively affect employees' well-being, and deteriorate the department's level of operation readiness. To explore DHS workforce resilience, the Institute of Medicine hosted two workshops in September and November 2011. The September workshop focused on DHS's operational and law enforcement personnel, while the November workshop concentrated on DHS policy and program personnel with top secret security clearances. The workshop brought together an array of experts from various fields including resilience research, occupation health psychology, and emergency response. **Building a Resilient Workforce: Opportunities for the Department of Homeland Security: Workshop Summary:** Defines workforce resilience and its benefits such as increased operational readiness and long-term cost savings for the specified population; Identifies work-related stressors faced by DHS workers, and gaps in current services and programs; Prioritizes key areas of concern; and Identifies innovative and effective worker resilience programs that could potentially serve as models for relevant components of the DHS workforce. The report presents highlights from more than 20 hours of presentations and discussions from the two workshops, as well as the agendas and a complete listing of the speakers, panelists, and planning committee members.

Mammalian Neuroendocrinology Paul V. Malven, 1993-01-12 *Mammalian Neuroendocrinology* presents a concise examination of how the nervous and endocrine systems interact to regulate physiological processes. Selected experimental results are presented to illustrate the current understanding of neuroendocrine processes. Neural influences and endocrine

feedback mechanisms related to the secretion of adeno-hypophysial hormones are summarized for each hormone. The book's concise nature and readable style are highly suited for use as a graduate textbook. There are also chapters devoted to each of the following topics: neurohypophysis, pineal gland, adrenal medulla, hormones and behavior, and neuroendocrine immunology. Comparisons are made among species of mammals, including laboratory rodents, domesticated ungulates, and primates. Agricultural and/or clinical aspects relevant to these topics are covered when appropriate. Mammalian Neuroendocrinology is excellent for students and professionals in neuroendocrinology, neuroscience, endocrinology, reproduction studies, and animal sciences.

The Matter of Facts Gareth Leng, Rhodri Ivor Leng, 2020-04-14 How biases, the desire for a good narrative, reliance on citation metrics, and other problems undermine confidence in modern science. Modern science is built on experimental evidence, yet scientists are often very selective in deciding what evidence to use and tend to disagree about how to interpret it. In *The Matter of Facts*, Gareth and Rhodri Leng explore how scientists produce and use evidence. They do so to contextualize an array of problems confronting modern science that have raised concerns about its reliability: the widespread use of inappropriate statistical tests, a shortage of replication studies, and a bias in both publishing and citing “positive” results. Before these problems can be addressed meaningfully, the authors argue, we must understand what makes science work and what leads it astray. The myth of science is that scientists constantly challenge their own thinking. But in reality, all scientists are in the business of persuading other scientists of the importance of their own ideas, and they do so by combining reason with rhetoric. Often, they look for evidence that will support their ideas, not for evidence that might contradict them; often, they present evidence in a way that makes it appear to be supportive; and often, they ignore inconvenient evidence. In a series of essays focusing on controversies, disputes, and discoveries, the authors vividly portray science as a human activity, driven by passion as well as by reason. By analyzing the fluidity of scientific concepts and the dynamic and unpredictable development of scientific fields, the authors paint a picture of modern science and the pressures it faces.

Analysis and Integration of Behavioral Units Michael D. Zeiler,Travis Thompson,2016-07-07 Originally published in 1986, this volume was the result of a conference in honor of the 65th birthday of the late Kenneth MacCorquodale, an exceptionally eloquent spokesman for the field of experimental analysis of behaviour at the time. The present volume grew directly out of the issues raised by MacCorquodale and Meehl in their Excursus: The Response Concept paper and which MacCorquodale posed so often when he taught. It is a fitting tribute to the man on his 65th birthday that a group of scholars whom he held in the highest regard convened in one place to think out loud about two of the thorniest problems facing behavioral science, namely, the nature of the units of analysis of the subject matter and the mechanisms responsible for their integration.
