Risk Management for Food Allergy Charlotte Madsen, Rene Crevel, Clare Mills, Steve Taylor, 2013-11-13 Risk Management for Food Allergy is developed by a team of scientists and industry professionals who understand the importance of allergen risk assessment and presents practical, real-world guidance for food manufacturers. With more than 12 million Americans suffering from food allergies and little indication of what is causing that number to continue to grow, food producers, packagers and distributors need to appropriately process, label and deliver their products to ensure the safety of customers with allergic conditions. By identifying risk factors during processing as well as determining appropriate safe thresholds of ingredients, the food industry must take increasingly proactive steps to avoid direct or cross-contamination as well as ensuring that their products are appropriately labeled and identified for those at risk. This book covers a range of critical topics in this area, including the epidemiology of food allergy, assessing allergen thresholds and risk, specifics of gluten management and celiac disease, and much more. The practical advice on factory risk management, catering industry practices, allergen detection and measurement and regulatory controls is key for food industry professionals as well as regulators in government and other public bodies. - Science-based insights into the potential risks of food allergens - Focused section on determining thresholds - Practical guidance on food allergen risk management, including case studies

Plant Allergens and Immune System Praveen Kumar Vemuri, Rishitha Challagulla, Ankitha Kunta,

Food Allergies Roua Lajnaf, 2024-10-29 Much has been written about food allergies in scientific journals and in the lay press, but *Food Allergies: Processing Technologies for Allergen Reduction* approaches the issue of food allergies from an industrial processing rather than a clinical perspective. Indeed, industrial food processing technologies can have many

beneficial effects to obtain various food products and to preserve foods from physical, chemical and microbiological alterations. However, processing technologies, including thermal and non-thermal technologies, can also alter the allergenic properties of food proteins. This book provides an authoritative source of information on the relationship between food processing technologies and food allergens with a greater variety of studied allergens including peanuts, tree nuts, cow's milk, eggs, sesame, lupine, soy, wheat, mustard, mushroom, fish and shellfish, as well as the importance of processing these when producing hypoallergenic foods. Key Features: Presents food allergies with recent advances and statistics concerning prevalence, physiopathologic mechanism, diagnosis and anaphylaxis Discusses food allergies in the food industry and investigates the effect of processing on allergenicity of foods during manufacturing Provides food processing and promising technologies to produce hypoallergenic food with high quality Covers the allergenic effect of different food additives with an investigation of cross-reaction risks This unique book is an indispensable guide for allergic patients, production managers, scientists and nutritionists within the food industry as well as covering a range of critical topics in this area for all those concerned with understanding and managing food allergies.

Food Allergen Testing George Siragakis,Dimosthenis Kizis,2013-12-24 An in-depth review of the current scientific knowledge on food allergens testing, covering the major methodologies and techniques used to detect food allergens. Food allergens are a series of agents, mainly proteins, which cause various unpleasant and sometimes clinical symptoms in humans through consumption of foods. Perhaps surprisingly, there are no treatments against food allergies which have been found to be 100% effective. The scope for individual difference in terms of how a person reacts to a given allergen is massive, making it incredibly difficult and complex to try and medicate against allergies. Food Allergens Testing takes a thorough look at modern molecular biology and immunochemical techniques used to detect food allergens. The eleven chapters constitute an in-depth review of the current scientific knowledge on food allergens, covering the major methodologies and techniques used in validated analytical approaches. The book is aimed at scientists and technical staff in the food industry and analytical laboratories who need an up-to-date treatment of both fundamental and applied research goals on food allergens, as well as a report on the validated methods currently in use for food allergens testing.

The book covers basic and clinical perspectives of adverse reactions to food antigens, adverse reactions to food additives and contemporary topics, including a review of the approaches available for diagnosis. Food Allergy is directed toward clinicians, nutritionists and scientists interested in food reactions and will be an invaluable resource for all those working in this field.

Food Allergy Linglin Fu, Bobby J. Cherayil, Haining Shi, Yanbo Wang, Yang Zhu, 2019-04-03 This book addresses the molecular mechanisms of food allergies and related control strategies. To do so, it covers a broad range of topics, including: the basic immunology of food allergies, including crosstalk between gut mucosal immunity and allergens; types of food allergens, structure of food allergen epitopes and cross-reactivity; detection and quantification methods for food allergens; in vitro and in vivo models for evaluating allergenicity; novel food processing methods for the development of hypoallergenic foods; bioactive natural compounds and functional foods for alleviating allergic reactions; modulation of the microbiota in food allergies and use of probiotics in allergic response regulation; and risk assessment and control strategies for food allergens. The information provided will enable food scientists/specialists to design safer and more functional food products, and will help regulatory agencies identify and label food allergens (and thus help consumers avoid allergic reactions). It will help clinicians and public health investigators prevent or treat outbreaks of food allergies, and will provide food producers and processors, as well as government inspectors, with valuable insights into evaluation, risk assessment and control strategies for allergens.
