The Biology of Learning P. Marler, H.S. Terrace, 2012-12-06 P. Marler* and H. S. Terrace** *The Rockefeller University Field Research Center Millbrook, NY 12545 **Dept. of Psychology, Columbia University New York, NY 10027, USA For the first half of this century, theories of animal conditioning were regarded as the most promising approach to the study of learning - both animal and human. For a variety of reasons, disillusionment with this point of view has become widespread during recent years. One prominent source of disenchantment with conditioning theory is a large body of ethological observations of both learned and unlearned natural behavior. These challenge the generality of principles of animal learning as derived from the intensive study of a few species in specialized laboratory situations. From another direction, the complexities of human language acquisition, surely the most impressive of learned achievements, have prompted developmental psychologists to doubt the relevance of principles of animal learning. Even within the realm of traditional studies of animal learning, it has become apparent that no single set of currently available principles can cope with the myriad of new empirical findings. These are emerging at an accelerating rate from studies of such phenomena as selective attention and learning, conditioned food aversion, complex problem solving behavior, and the nature of reinforcement. Not very surprisingly, as a reaction against the long-held but essentially unrealized promise of general theories of learning, many psychologists have asked an obvious question: does learning theory have a future? All Things Lovely Jenn Johnson,2021-11-09 Take the first steps to living as a healthier and happier woman and discover the spiritual importance of acceptance, gathering, and community. Jenn Johnson has come to realize that the pursuit of perfection is unrealistic and unfair. Instead, we need to pause and reflect on what's in front of us. But how? How can we slow down? How can we remain focused on what's important and do things with intention? What can we pursue that represents God's heart for us, things that are true, noble, right, pure, admirable, excellent, praiseworthy? By pursuing all things lovely. Living a holistic and holy life, a life marked by beauty and truth, means being mindful and intentional about what we put in our bodies, how we present ourselves to the world, the spaces we create, and the people we let into our lives. When we set our minds on what is lovely, we begin to see ourselves and the world as God intended. We begin to be wholly renewed.

Historical Dictionary of Children's Literature Emer O'Sullivan,2010-11-22 Children's literature comes from a number of different sources-folklore (folk- and fairy tales), books originally for adults and subsequently adapted for children, and material authored specifically for them-and its audience ranges from infants through middle graders to young adults (readers from about 12 to 18 years old). Its forms include picturebooks, pop-up books, anthologies, novels, merchandising tie-ins,

novelizations, and multimedia texts, and its genres include adventure stories, drama, science fiction, poetry, and information books. The Historical Dictionary of Children's Literature relates the history of children's literature through a chronology, an introductory essay, appendixes, a bibliography, and over 500 cross-referenced dictionary entries on authors, books, and genres. Some of the most legendary names in all of literature are covered in this important reference, including Hans Christian Anderson, L. Frank Baum, Lewis Carroll, Roald Dahl, Charles Dickens, C.S. Lewis, Beatrix Potter, J.K. Rowling, Robert Louis Stevenson, Mark Twain, J.R.R. Tolkien, Jules Verne, and E.B. White.

Memory for Actions Johannes Engelkamp, 1998-01 Psychological experiments demonstrate that we remember self-performed actions better and more easily than actions performed by others, which we only perceived, or actions which were only reported to us. In everyday life, we remember whether or not we have already performed certain actions. The aim of this book is to explain why we remember our own actions so well. In doing so, it offers a comprehensive survey of research and theory in this field of memory psychology. The author describes the development of this research in the light of recent theory.
