This book offers an introductory text on mathematical methods for graduate students of economics and finance—and leading to the more advanced subject of quantum mathematics. The book begins by focusing on the core subjects of linear algebra and calculus, before moving on to the more advanced topics of probability theory and stochastic calculus.

Detailed derivations of the Black-Scholes and Merton equations are provided - in order to clarify the mathematical underpinnings of stochastic calculus. Each chapter of the first four sections includes a problem set, chiefly drawn from economics and finance. In turn, section five addresses quantum mathematics. The mathematical topics covered in the first four sections are sufficient for the study of quantum mathematics; Black-Scholes option theory and Merton's theory of corporate debt are among topics analyzed using quantum mathematics.

Psychological Studies of Science and Technology Kieran C. O'Doherty, Lisa M. Osbeck, Ernst Schraube, Jeffery Yen, 2019-08-24 This book provides a significant contribution to scholarship on the psychology of science and the psychology of technology by showcasing a range of theory and research distinguished as psychological studies of science and technology. Science and technology are central to almost all domains of human activity, for which reason they are the focus of subdisciplines such as philosophy of science, philosophy of technology, sociology of knowledge, and history of science and technology. To date, psychology has been marginal in this space and limited to relatively narrow epistemological orientations. By explicitly embracing pluralism and an international approach, this book offers new perspectives and directions for psychological contributions. The book brings together leading theorists and researchers from around the world and spans scholarship across a variety of traditions that include theoretical psychology, critical psychology, feminist psychology and social constructionist approaches. Following a historical and conceptual introduction, the collection is divided into three sections: Scoping a New Psychology of Science and Technology, Applying Psychological Concepts to the Study of Science and Technology and Critical Perspectives on Psychology as a Science. The book will interest interdisciplinary scholars who work in the space of Science and Technology Studies and psychologists interested in the diverse human aspects of science and technology.
