Hidráulica de canales: fundamentos Juan H. Cadavid R, 2020-06-24 La hidráulica de canales es otra rama aplicada de la mecánica de los fluidos incomprensibles. Esta obra ha sido concebida para servir como auxiliar en la formación básica del estudiante de hidráulica de canales. Así mismo, para proveer de algún apoyo al ingeniero, especialmente en algunos temas de reconocida complejidad. Su estructura se centra en la parte formativa y no se enfoca en las aplicaciones avanzadas y específicas, en la que son bastantes prolijos los tratados clásicos. Articula una secuencia de siete capítulos. El primero acerca el asunto a sus raíces más próximas, en el campo de la mecánica y de la ingeniería. Los tres siguientes capítulos se ocupan de conceptos relativos a la energía. El capítulo quinto discurre en el principio de conservación del lineal, y muy especialmente en el interesante y llamativo fenómeno del resalto hidráulico. El sexto formaliza la noción del flujo uniforme. El último se ocupa del flujo gradualmente variado y tiene como objetivo final el cálculo detallado del trazado vertical de la superficie libre de un canal, o perfil de flujo, momentum lineal, y muy especialmente en el interesante y llamativo fenómeno del resalto hidráulico. El sexto formaliza la noción del flujo uniforme. El último se ocupa del flujo gradualmente variado y tiene como objetivo final el cálculo detallado del trazado vertical de la superficie libre de un canal, o perfil de flujo.

Hidráulica de canales Máximo Villón Béjar, 2008-01-01 En su obra el autor compendia su amplia experiencia como estudiante, profesor, investigador y consultor en el campo de los recursos de agua y suelo y nos ofrece una obra clara, sencilla y sobre todo práctica, en la que se presentan los conceptos teóricos involucrados en el diseño de canales, acompañados de ejemplos y problemas en los que se ofrecen situaciones reales para que el lector de la obra pueda aplicar los conceptos aprendidos. Esta versión recoge las sugerencias, correcciones y adiciones que durante su uso como material didáctico han podido ser detectadas. Además se han hecho esfuerzos para mantener el texto al nivel de la actual tecnología de la computación, por lo que para cada situación se introducen listados de programas en QuikxBASIC que simplifican los cálculos laboriosos.

Open-channel Hydraulics Ven Te Chow, 2009 Open-Channel Hydraulics, originally published in 1959, deals with the design for flow in open channels and their related structures. Covering both theory and practice, it attempts to bridge the gap that generally exists between the two. Theory is introduced first and is then applied to design problems. In many cases the application of theory is illustrated with practical examples. Theory is frequently simplified by adopting theoretically less

rigorous treatments with sound concepts, by avoiding use of advanced mathematical manipulations, or by replacing such manipulations with practical numerical procedures. To facilitate understanding of the subject matter, the treatment is mostly based on the condition of one- or two-dimensional flow. The book deals mainly with American practice but also includes related information from many countries throughout the world. Material is divided into five main sections for an orderly and logical treatment of the subject: Basic Principles, Uniform Flow, Varied Flow, Rapidly Varied Flow, and Unsteady Flow. There are 67 illustrative examples, 282 illustrations, 319 problems, and 810 references. This classic textbook was the first English-language book on the subject in two decades. Open-Channel Hydraulics is a valuable text for students of engineering mechanics, hydraulics, civil, agricultural, sanitary, and mechanical engineering, and a helpful compendium for practicing engineers. Dr. Ven Te Chow was a Professor of Hydraulic Engineering and led the hydraulic engineering research and teaching programs at the University of Illinois. Through many years of experience as a teacher, engineer, researcher, writer, lecturer, and consultant, he became an internationally recognized leader in the fields of hydraulics, hydrology and hydraulic engineering. Dr. Ven Te Chow authored two technical books and more than 60 articles and papers in scientific and engineering magazines and journals. He was a member of IAHR, ASCE, AGU, AAAS, SEE, and Sigma Xi, and had been Chairman of the American Geophysical Union's Permanent Research Committee on Runoff.

Dam Maintenance and Rehabilitation J.A. Llanos, J. Yague, F. Sanz de Ormijana, M. Cabrera, J. Penas, 2002-01-01
During the life of a dam, changes in safety standards, legislation and land use will inevitably occur, and functional deterioration may also appear. To meet these challenges, these Proceedings from a panel of international experts assess, define and re-evaluate the design criteria for the construction of dams and the many attendant issues in on-going maintenance and management. Authors include international specialists: academics, professionals and those in local government, utilities and suppliers. Practitioners from these same fields will find the book a useful tool in acquiring a comprehensive knowledge of managing and retrofitting dams, so that they can continue to meet society's needs.

AGUA Santiago Ramírez, Juan Carlos Vega, 2017-08-22 En el año 2000 más de 1,000 millones de personas carecían de agua potable y en el 2010 los humanos consumimos entre el 70% y 90% del agua disponible; estas cifras dan cuenta de lo fundamental que es adquirir conocimientos, comprender, analizar y aportar soluciones para un mejor uso del líquido. La presente obra aborda temas de mucha importancia y complejidad como las fuentes desde donde obtiene el agua, los procedimientos para obtener agua potable y la utilización industrial de ésta enmarcada en el desarrollo sustentable. Los problemas actuales relativos a estos temas precisan de conocimientos y comprensión cabales con los cuales se pueda hacer frente a ellos. Es necesario comprender la problemática referente a la disposición de agua en calidad y cantidad para poder

buscar soluciones al abastecimiento actual y futuro de este vital recurso. Este libro contribuye al aumento de propuestas adecuadas para la gestión sustentable del agua.

Hidráulica de ríos y procesos morfológicos Tomás Ochoa Rubio,2011-01-01 El libro analiza el comportamiento de las corrientes naturales en lo que se refiere al movimiento del agua; los factores influyentes y los patrones de flujo, así como las particularidades del movimiento de los sedimentos. Asimismo, bosqueja un marco de referencia para el estudio de los procesos morfológicos. Ochoa Rubio expone las clasificaciones geomorfológicas más comunes los fundamentos de la teoría sobre la formación de los cauces naturales para luego abordar los fenómenos de la estabilidad de cauces aplicados a puentes y obras similares construidas sobre ríos o en sus orillas. El estudio de las mesoformas y las macroformas como parte importante de los procesos morfológicos que experimentan las corrientes naturales se hace presente en la obra y se complementa con la predicción de los cambios que se pueden presentar en ellas, es decir, las transformaciones que sufren los procesos morfológicos con el tiempo.

Hydraulics in Civil and Environmental Engineering Andrew Chadwick,John Morfett,Martin Borthwick,2021-06-07 This classic text, now in its sixth edition, combines a thorough coverage of the basic principles of civil engineering hydraulics with a wide-ranging treatment of practical, real-world applications. It now includes a powerful online resource with worked solutions for chapter problems and solution spreadsheets for more complex problems that may be used as templates for similar issues. Hydraulics in Civil and Environmental Engineering is structured into two parts to deal with principles and more advanced topics. The first part focuses on fundamentals, such as hydrostatics, hydrodynamics, pipe and open channel flow, wave theory, physical modelling, hydrology and sediment transport. The second part illustrates engineering applications of these principles to pipeline system design, hydraulic structures, river and coastal engineering, including up-to-date environmental implications, as well as a chapter on computational modelling, illustrating the application of computational simulation techniques to modern design, in a variety of contexts. New material and additional problems for solution have been added to the chapters on hydrostatics, pipe flow and dimensional analysis. The hydrology chapter has been revised to reflect updated UK flood estimation methods, data and software. The recommendations regarding the assessment of uncertainty, climate change predictions, impacts and adaptation measures have been updated, as has the guidance on the application of computational simulation techniques to river flood modelling. Andrew Chadwick is an honorary professor of coastal engineering and the former associate director of the Marine Institute at the University of Plymouth, UK. John Morfett was the head of hydraulics research and taught at the University of Brighton, UK. Martin Borthwick is a consultant hydrologist, formerly a flood hydrology advisor at the UK's Environment Agency, and previously an associate professor at the University of Plymouth, UK.

Defensas ribereñas con gaviones y geosintéticos Gerardo Fracassi,2019-03-01 Los revestimientos, muros de

contención, diques longitudinales y espigones son apenas algunas de las soluciones para la estabilización, regularización, protección contra la erosión y control de las crecidas en cursos de agua. Defensas ribereñas con gaviones y geosintéticos explica las características de estas obras, los problemas que pueden ser solucionados con ellas y la forma de dimensionarlas. La obra aborda desde la morfología fluvial y los tipos de intervención en un curso de agua hasta la Bioingeniería y los métodos de dimensionamiento. Presente sugerencias para proyectos de estructuras en gaviones y muestra diversos casos reales en que explica detalladamente los problemas encontrados y las soluciones aplicadas, con ilustraciones paso a paso. Es una valiosa referencia para profesionales involucrados en obras de protección y estabilización de márgenes, control del trazado del río y protección contra inundaciones. Esta es la primera publicación de la Colección Maccaferri con soluciones de ingeniería para obras hidráulicas.

Open-channel Hydraulics Richard H. French, 1994-01 This book was originally designed as a state-of-the-art reference book for the practising professional, but the addition of homework problems for the primary chapters and a solutions manual has made it also very suitable as a textbook for courses in open-channel hydraulics in civil engineering. The homework problems were drawn from the author's many years of experience teaching in civil engineering and consultancy work.

Trabajos de infraestructuras forestales MOHEDAS DÍAZ, MARGARITA, MORENO VEGA, ALBERTO, 2016-01-01 El presente manual se corresponde con la Unidad Formativa UF0700, incluida en el Módulo Formativo MF0728_3: Gestión de la repoblación forestal y corrección hidrológico-forestal, que a su vez forma parte del Certificado de Profesionalidad (AGAR0109): Gestión de repoblaciones forestales y de tratamientos silvícolas, y cuyo contenido sigue a lo establecido por el Real Decreto 1375/2008, de 1 de agosto, que regula los Certificados de Profesionalidad en la Familia Profesional Agraria. A lo largo de sus cuatro capítulos, este libro plantea, de un modo comprensible, los aspectos más importantes a considerar sobre trabajos de infraestructuras forestales. Así, el primer capítulo estudia la documentación de un proyecto o plan técnico de corrección hidrológico-forestal. El segundo capítulo explica las distintas técnicas empleadas en trabajos de corrección

hidrológico-forestal. En el tercer capítulo se analizan los caminos de tierra que cubren las necesidades de tráfico generadas en las explotaciones forestales. Y el último capítulo describe la Evaluación de Impacto Ambiental en proyectos técnicos para la ejecución de infraestructuras forestales. Margarita Mohedas Díaz es Ing. de Montes, Master en Educadora Ambiental y Técnico Superior en PRL. Realizó, hasta tercer curso, la titulación de Ing. Técnico de Obras Públicas, especialidad en Construcciones Civiles. Actualmente trabaja para la empresa multinacional Saint Gobain Pam y cursa el MBA. Ha investigado en Aberdeen (Escocia) sobre micorrizas de coníferas.

Manual práctico de sistemas de riego localizado ZAPATA SIERRA, ANTONIO JESÚS, 2020-05-22 Este libro pertenece a la colección de Manuales Prácticos de Agricultura de Mundi-Prensa. Es una obra clara y práctica, que, sin perder rigor, ofrece toda la información para que el lector, principiante o profesional, pueda diseñar y gestionar un riego por goteo, tanto al aire libre como en cultivo protegido. Este manual describe los procedimientos necesarios para definir cada elemento del riego localizado, todos ellos ilustrados mediante numerosas figuras y ejemplos de cálculo para una mejor comprensión de los mismos. Se aporta un resumen amplio de conceptos básicos para la metodología presentada y se proporcionan casos resueltos y propuestos con la solución, para que el lector pueda comprobar si realmente ha comprendido el fenómeno. Antonio Jesús Zapata Sierra es Dr. Ingeniero Agrónomo por la Universidad de Córdoba y Profesor Titular de Ingeniería Hidráulica en la Universidad de Almería desde hace 25 años. Es autor de trabajos científicos e informes profesionales en el ámbito de la hidrología y el riego en zonas áridas.

Ingeniería de vías agroforestales HERRÁEZ GARRIDO, FERNANDO, MORENO VEGA, ALBERTO, 2019-05-14 Diseño, cálculo, construcción y mantenimiento de caminos En España, la longitud actual de la red de caminos rurales y vías o pistas agroforestales resulta incluso superior a la de carreteras. Estas infraestructuras lineales, aparte de comunicar pequeños núcleos poblacionales, prestan servicio a todos los aprovechamientos agroforestales y al turismo rural, cuyas actividades podrían verse muy afectadas en caso de no existir dicha red. Entre las atribuciones de los antiguos Ingenieros y actuales Graduados y Másteres en Ingeniería Agronómica y de Montes está la de proyectar caminos, ya sean agrícolas o forestales, así como las de dirigir, controlar o certificar las obras para la construcción y el mantenimiento de los mismos. Pero las actuales necesidades de comunicación, junto con la modernización del sector agroforestal, sobre todo en lo que se refiere a maquinaria e infraestructuras, ha modificado el concepto de “camino rural”, demandando estudios mucho más detallados de su geometría y sus firmes en función de las intensidades de tráfico presentes y futuras. La utilización de máquinas agroforestales cada vez más potentes y pesadas, capaces de arrastrar cargas remolcadas de hasta 24 t, unido al aumento de las dimensiones y velocidades de los vehículos en general, ha dado lugar a unas mayores exigencias constructivas en los viales agroforestales. Unos caminos que, dado el ajustado presupuesto existente para este tipo de obras, precisan y exigen de

fórmulas y técnicas duraderas y a la vez económicamente viables, tanto en su diseño, como en su ejecución y mantenimiento. Por todo ello, se ha considerado necesario elaborar un libro donde se aborden todas estas cuestiones. Una publicación dirigida tanto a estudiantes de ingenierías agrícolas y forestales, como a los titulados de las mismas o a cualquier profesional que tenga una relación directa o indirecta con esta materia.
