The Practice of Health Program Evaluation David Grembowski, 2015-09-16 Reflecting the latest developments in the field, the Second Edition provides readers with effective methods for evaluating health programs, policies, and health care systems, offering expert guidance for collaborating with stakeholders involved in the process. Author David Grembowski explores evaluation as a three-act play: Act I shows evaluators how to work with decision makers and other groups to identify the questions they want answered; Act II covers selecting appropriate evaluation designs and methods to answer the questions and reveal insights about the program's impacts, cost-effectiveness, and implementation; and Act III discusses making use of the findings. Packed with relevant examples and detailed explanations, the book offers a step-by-step approach that fully prepares readers to apply research methods in the practice of health program evaluation.

The Practice of Health Program Evaluation David Grembowski, 2001-04-13 As more and more money is spent developing programs and services to solve health problems, how can one know if a specific health program works or what it would take to improve it? Aimed at addressing this issue, *The Practice of Health Program Evaluation* provides readers with the methods to evaluate health programs and the expertise to navigate the political terrain so as to work more effectively with decision makers and other groups. To convey these principles, Grembowski uses the metaphor of evaluation being a three-act play with a variety of actors and interest groups, each having a role that involves entering and exiting the stage at different points in the evaluation process.

An Integrated Framework for Assessing the Value of Community-Based Prevention Institute of Medicine, Board on Population Health and Public Health Practice, Committee on Valuing Community-Based, Non-Clinical Prevention Policies and Wellness Strategies, 2012-11-29 During the past century the major causes of morbidity and mortality in the United States have shifted from those related to communicable diseases to those due to chronic diseases. Just as the major causes of

morbidity and mortality have changed, so too has the understanding of health and what makes people healthy or ill. Research has documented the importance of the social determinants of health (for example, socioeconomic status and education) that affect health directly as well as through their impact on other health determinants such as risk factors. Targeting interventions toward the conditions associated with today's challenges to living a healthy life requires an increased emphasis on the factors that affect the current cause of morbidity and mortality, factors such as the social determinants of health. Many community-based prevention interventions target such conditions. Community-based prevention interventions offer three distinct strengths. First, because the intervention is implemented population-wide it is inclusive and not dependent on access to a health care system. Second, by directing strategies at an entire population an intervention can reach individuals at all levels of risk. And finally, some lifestyle and behavioral risk factors are shaped by conditions not under an individual's control. For example, encouraging an individual to eat healthy food when none is accessible undermines the potential for successful behavioral change. Community-based prevention interventions can be designed to affect environmental and social conditions that are out of the reach of clinical services. Four foundations - the California Endowment, the de Beaumont Foundation, the W.K. Kellogg Foundation, and the Robert Wood Johnson Foundation - asked the Institute of Medicine to convene an expert committee to develop a framework for assessing the value of community-based, non-clinical prevention policies and wellness strategies, especially those targeting the prevention of long-term, chronic diseases. The charge to the committee was to define community-based, non-clinical prevention policy and wellness strategies; define the value for community-based, non-clinical prevention policies and wellness strategies; and analyze current frameworks used to assess the value of community-based, non-clinical prevention policies and wellness strategies, including the methodologies and measures used and the short- and long-term impacts of such prevention policy and wellness strategies on health care spending and public health. An Integrated Framework for Assessing the Value of Community-Based Prevention summarizes the committee's findings.

Process Evaluation for Public Health Interventions and Research Allan Steckler, 2002-11-18 Process evaluation is an essential component of any program evaluation or intervention research effort. This important resource offers an overview of the history, purpose, strengths, and limitations of process evaluation and includes illustrative case material of the current state of the art in process evaluation. *Process Evaluation for Public Health Interventions and Research* fills an important gap in the literature for public health researchers, practitioners, scholars, trainers, and students.

Progress in Preventing Childhood Obesity Institute of Medicine, Food and Nutrition Board, Committee on Progress in Preventing Childhood Obesity, 2007-03-22 The remarkable increase in the prevalence of obesity among children and youth in the United States over a relatively short timespan represents one of the defining public health challenges of the 21st century. The country is beginning to recognize childhood obesity as a major public health epidemic that will incur substantial costs to

the nation. However, the current level of investment by the public and private sectors still does not match the extent of the problem. There is a substantial underinvestment of resources to adequately address the scope of this obesity crisis. At this early phase in addressing the epidemic, actions have begun on a number of levels to improve the dietary patterns and to increase the physical activity levels of young people. Schools, corporations, youth-related organizations, families, communities, foundations, and government agencies are working to implement a variety of policy changes, new programs, and other interventions. These efforts, however, generally remain fragmented and small in scale. Moreover, the lack of systematic monitoring and evaluation of interventions have hindered the development of an evidence base to identify, apply, and disseminate lessons learned and to support promising efforts to prevent childhood obesity. Progress in Preventing Childhood Obesity: How Do We Measure Up? examines the progress made by obesity prevention initiatives in the United States from 2004 to 2006. This book emphasizes a call to action for key stakeholders and sectors to commit to and demonstrate leadership in childhood obesity prevention, evaluates all policies and programs, monitors their progress, and encourages stakeholders to widely disseminate promising practices. This book will be of interest to federal, state, and local government agencies; educators and schools; public health and health care professionals; private-sector companies and industry trade groups; media; parents; and those involved in implementing community-based programs and consumer advocacy.

A Framework for Educating Health Professionals to Address the Social Determinants of Health National Academies of Sciences, Engineering, and Medicine, Institute of Medicine, Board on Global Health, Committee on Educating Health Professionals to Address the Social Determinants of Health, 2016-10-14 The World Health Organization defines the social determinants of health as the conditions in which people are born, grow, work, live, and age, and the wider set of forces and systems shaping the conditions of daily life. These forces and systems include economic policies, development agendas, cultural and social norms, social policies, and political systems. In an era of pronounced human migration, changing demographics, and growing financial gaps between rich and poor, a fundamental understanding of how the conditions and circumstances in which individuals and populations exist affect mental and physical health is imperative. Educating health professionals about the social determinants of health generates awareness among those professionals about the potential root causes of ill health and the importance of addressing them in and with communities, contributing to more effective strategies for improving health and health care for underserved individuals, communities, and populations. Recently, the National Academies of Sciences, Engineering, and Medicine convened a workshop to develop a high-level framework for such health professional education. A Framework for Educating Health Professionals to Address the Social Determinants of Health also puts forth a conceptual model for the framework's use with the goal of helping stakeholder groups envision ways in which organizations, education, and communities can come together to address health inequalities.

Evaluating Public and Community Health Programs Muriel J. Harris, 2010-01-28 Evaluating Public and Community Health Programs Evaluating Public and Community Health Programs combines an introduction to public and community health program evaluation with a detailed survey of methods in community assessment, planning, program design, quantitative and qualitative data collection, data analysis, and reporting of findings. The book presents an approach built on the two primary evaluation frameworks that are most common in public and community health: the Donaldson three-step program theory-driven evaluation model and CDC's six-step Framework for Program Evaluation in Public Health. The author emphasizes practical, ongoing evaluation strategies that involve all program stakeholders, not just evaluation experts, and presents a simple and effective standards-based four-step model that will produce rich and useful results. The book's resources (scenarios, worksheets, and guidelines) can be used throughout the planning, implementation, and evaluation process. In addition, each chapter includes a list of learning objectives, key terms, and ideas for review, as well as summaries and discussion questions that can reinforce each chapter's lessons.

Improving Evaluations Lois-ellin Datta, Robert O. Perloff, 1979-07 Abstract: The value of evaluations to the public interest depends on their design and utilization. Evaluators from diverse backgrounds present their views on how to improve evaluation research. Case studies and theoretical arguments address 4 areas of concern: obstacles to evaluation; improving evaluation designs; improving measurement; and the role of evaluation. Political forces are seen as major factors limiting the effectiveness of evaluations of federal and state policies and programs. The questions of causal inference and internal validity in evaluation design are examined. Methods for improving measurement are illustrated by studies of mental health policies, social and community programs, job performance, and health technology. The role of evaluation is debated from a methodological and a theoretical perspective. Evaluation's impact on change, and emerging issues for evaluators and evaluation users are discussed. (nm).

Improving Healthcare Quality in Europe Characteristics, Effectiveness and Implementation of Different Strategies OECD, World Health Organization, 2019-10-17 This volume, developed by the Observatory together with OECD, provides an overall conceptual framework for understanding and applying strategies aimed at improving quality of care. Crucially, it summarizes available evidence on different quality strategies and provides recommendations for their implementation. This book is intended to help policy-makers to understand concepts of quality and to support them to evaluate single strategies and combinations of strategies.

The Program Evaluation Standards Joint Committee on Standards for Educational Evaluation, James R. Sanders, 1994-04-06 *The Program Evaluation Standards* is a 'must-have' book for anyone responsible for reviewing evaluation proposals, planning and conducting evaluations, managing evaluation projects, or judging the merit and worth of evaluations once completed. For experienced practitioners, it provides a set of values and principles by which to guide successful practice, that is, a set of criteria that determines whether educational evaluations are trustworthy and fair. The Standards sets expectations of the design and implementation of educational evaluation for all practitioners in all types of educational arenas, even those involved in social programming endeavors. For newcomers and those less experienced who may be responsible for commissioning and using evaluations, the Standards supplies a useful framework of generating a list of questions to raise about any evaluation plan or final report in an effort to assess its pros and cons. The book is an invaluable 'how-to' resource for graduate students venturing out into the field, and it instills a sense of what it means to be a responsible evaluator. For clients or consumers, the book offers advice on what they should expect of an evaluation--Publisher description.

Use of the RE-AIM Framework: Translating Research to Practice with Novel Applications and Emerging Directions Russell E. Glasgow, Samantha M. Harden, Bridget Gaglio, Borsika Adrienn Rabin, Marcia G. Ory, Matthew Lee Smith, Paul A. Estabrooks, 2021-09-16

High Quality Care for All Secretary of State for Health, 2008 This review incorporates the views and visions of 2,000 clinicians and other health and social care professionals from every NHS region in England, and has been developed in discussion with patients, carers and the general public. The changes proposed are locally-led, patient-centred and clinically driven. Chapter 2 identifies the challenges facing the NHS in the 21st century: ever higher expectations; demand driven by demographics as people live longer; health in an age of information and connectivity; the changing nature of disease; advances in treatment; a changing health workplace. Chapter 3 outlines the proposals to deliver high quality care for patients and the public, with an emphasis on helping people to stay healthy, empowering patients, providing the most effective treatments, and keeping patients as safe as possible in healthcare environments. The importance of quality in all aspects of the NHS is reinforced in chapter 4, and must be understood from the perspective of the patient's safety, experience in care received and the effectiveness of that care. Best practice will be widely promoted, with a central role for the National Institute for Health and Clinical Excellence (NICE) in expanding national standards. This will bring clarity to the high standards expected and quality performance will be measured and published. The review outlines the need to put frontline staff in control of this drive for quality (chapter 5), with greater freedom to use their expertise and skill and decision-making to find innovative ways to improve care for patients. Clinical and managerial leadership skills at the local level need further development, and all levels of staff will receive support through education and training (chapter 6). The

review recommends the introduction of an NHS Constitution (chapter 7). The final chapter sets out the means of implementation.

Prevention Effectiveness Anne C. Haddix, Steven M. Teutsch, Phaedra S. Corso, 2003 As public accountability has increased and resources have become scarcer, public health, like clinical medicine, has been forced to re-examine the benefits and costs of its activities. Decision and economic analysis are basic tools in carrying out that mission. These methods have become standard practice in clinical medicine and health services research. This book, now in its second edition, was written in an effort to apply and adapt that experience with public health situations. The book was originally written to introduce Centers for Disease Control and Prevention staff to the concepts of decision and economic analysis, to provide guidance on methods to maximize comparability of studies, and to provide access to frequently used reference information. It has been adapted to meet the needs of scientists and managers in state and local health departments and managed care organizations as well as students in schools of public health and clinicians for an introductory text --a text that shows how these methods can be applied in population-based practice, to facilitate better comparability of studies, and to solidify understanding of the scientific basis for use of these tools in decision making. Decision makers will learn how these studies are conducted so they can be critical consumers-- understanding the strengths and limitations- and apply findings to policy and practice. The second edition updates and expands upon the standard methodology for conducting prevention effectiveness analyses. Each chapter has been revised or re-written. The chapters on measuring effectiveness, decision analysis, and making information useful for decision makers as well as several appendices are entirely new.

Evidence-Based Practice for Public Health Emergency Preparedness and Response National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Board on Health Sciences Policy, Committee on Evidence-Based Practices for Public Health Emergency Preparedness and Response, 2020-10-28 When communities face complex public health emergencies, state local, tribal, and territorial public health agencies must make difficult decisions regarding how to effectively respond. The public health emergency preparedness and response (PHEPR) system, with its multifaceted mission to prevent, protect against, quickly respond to, and recover from public health emergencies, is inherently complex and encompasses policies, organizations, and programs. Since the events of September 11, 2001, the United States has invested billions of dollars and immeasurable amounts of human capital to develop and enhance public health emergency preparedness and infrastructure to respond to a wide range of public health threats, including infectious diseases, natural disasters, and chemical, biological, radiological, and nuclear events. Despite the investments in research and the growing body of empirical literature on a range of preparedness and response capabilities and functions, there has been no national-level, comprehensive review and grading of evidence for public health emergency preparedness and response practices comparable to those utilized in medicine and other public

health fields. Evidence-Based Practice for Public Health Emergency Preparedness and Response reviews the state of the evidence on PHEPR practices and the improvements necessary to move the field forward and to strengthen the PHEPR system. This publication evaluates PHEPR evidence to understand the balance of benefits and harms of PHEPR practices, with a focus on four main areas of PHEPR: engagement with and training of community-based partners to improve the outcomes of at-risk populations after public health emergencies; activation of a public health emergency operations center; communication of public health alerts and guidance to technical audiences during a public health emergency; and implementation of quarantine to reduce the spread of contagious illness.

Prevention, Policy, and Public Health Amy A. Eyler, Jamie F. Chriqui, Sarah Moreland-Russell, Ross C. Brownson, 2016 Prevention, Policy, and Public Health provides a basic foundation for students, professionals, and researchers to be more effective in the policy arena. It offers information on the dynamics of the policymaking process, theoretical frameworks, analysis, and policy applications. It also offers coverage of advocacy and communication, the two most integral aspects of shaping policies for public health.

Transdisciplinary Public Health Debra Haire-Joshu, Timothy D. McBride, 2013-05-09 This book makes a great leap in the conceptualization of transdisciplinary approaches, as well as provides concrete examples in practice, teaching, policy, and research. From the Foreword by Edward F. Lawlor, dean and the William E. Gordon Distinguished Professor, the Brown School; and founding director, Institute for Public Health at Washington University in St. Louis The complexity of public health and social problems is becoming more challenging. Understanding and designing solutions for these problems requires perspectives from multiple disciplines and fields as well as cross-disciplinary research and practice teams. Transdisciplinary Public Health fills a void in the literature and offers a comprehensive text that introduces transdisciplinary methods as a means for providing an innovative tool set for problem-solving in public health research and practice. With contributions from leading experts, Transdisciplinary Public Health offers an understanding of interactions among the biological, behavioral, social, and public health sciences; shared disciplinary frameworks in analyzing health problems; and the integration and evaluation of transdisciplinary solutions to alleviate complex public health issues. Use of this important resource will promote transdisciplinary research and practice, resulting in novel solutions that positively impact human health.
