Somnium Johannes Kepler,2017-12-18 Somnium is a Latin word for Dream. This novel was written by Johannes Kepler in 1608, in a time when a trip to the ethereal regions of the moon would be possible only with the assistance of supernatural forces. Historians consider this lunar exploration a remarkable and revolutionary text, and one of the most provocative and innovative of Kepler's works. Great authors/scientists such as Isaac Asimov and Carl Sagan suggested it as the first science fiction story. If it is not, we can at least consider it as the first serious scientific work about lunar astronomy.

The Equation that Couldn't Be Solved Mario Livio,2005-09-19 What do Bach's compositions, Rubik's Cube, the way we

choose our mates, and the physics of subatomic particles have in common? All are governed by the laws of symmetry, which elegantly unify scientific and artistic principles. Yet the mathematical language of symmetry-known as group theory-did not emerge from the study of symmetry at all, but from an equation that couldn't be solved. For thousands of years mathematicians solved progressively more difficult algebraic equations, until they encountered the quintic equation, which resisted solution for three centuries. Working independently, two great prodigies ultimately proved that the quintic cannot be solved by a simple formula. These geniuses, a Norwegian named Niels Henrik Abel and a romantic Frenchman named Évariste Galois, both died tragically young. Their incredible labor, however, produced the origins of group theory. The first extensive, popular account of the mathematics of symmetry and order, *The Equation That Couldn't Be Solved* is told not through abstract formulas but in a beautifully written and dramatic account of the lives and work of some of the greatest and most intriguing mathematicians in history.

[Documenting Learning with ePortfolios](#) Tracy Penny Light,Helen L. Chen,John C. Ittelson,2011-12-27 Documenting Learning with ePortfolios Documenting Learning with ePortfolios provides higher education instructors with a theory-to-practice approach to understanding the pedagogy behind ePortfolios and to helping students use them to record and reflect on their learning in multiple contexts. The authors outline a framework of six critical iterative tasks to undertake when

implementing ePortfolios for student success. Filled with real-life models of successful ePortfolio projects, the book also includes guidance for faculty development to support the use of ePortfolios and covers the place of ePortfolios in institutional assessment efforts. Finally, the authors offer considerations for deciding on which technological tools to deploy in implementing a successful ePortfolio initiative. These authors achieve the very rare accomplishment of combining their years of practical experience, broad conceptual and research underpinnings, and incredibly useful examples and applications into a single, concise volume for enhancing student learning through an ePortfolio approach to our shared educational purpose. TERREL L. RHODES, vice president, Office of Quality, Curriculum, and Assessment, Association of American Colleges and Universities Educators keep asking for more information about how to use electronic portfolios. This book provides answers, guidelines, examples, and scholarly insights about learning based in the wisdom of the ePortfolio community of practice what a powerful addition to our collective knowledge! I am thankful to the authors for this boost to our field and for providing a blueprint for implementers to follow. IEA International Civic and Citizenship Education Study 2016 Assessment Framework Wolfram Schulz,John Ainley,Julian Fraillon,Bruno Losito,Gabriella Agrusti,2016-07-29 The International Civic and Citizenship Education Study (ICCS) investigates the ways in which young people are prepared to undertake their roles as citizens in a range of countries in the second decade of the 21st century. ICCS 2016 is a continuation of a study initiated in 2009. This document outlines the framework and assessment design for the ICCS 2016. ICCS 2016 will report on student knowledge and understanding of key aspects of civics and citizenship, as well as student attitudes to, and engagement with, civic life. This survey is intended to respond to enduring and emerging challenges of educating young people in a world where contexts of democracy and civic participation continue to change. New developments include the increase in the use of social media as a tool for civic

engagement, growing concerns about global threats and sustainable development, as well as recognition of the role of schools in fostering peaceful ways of interaction between young people. iccs 2016= is= sponsored= by= the= international= association= for= evaluation= of= educational= achievement= (iea).= over= past= 50= years,= iea= has= conducted= comparative= research= studies= in= a= range= domains= focusing= on= policies,= practices,= and= outcomes= many= countries= around= world.= prior= to= iccs= 2016,= three= civic= citizenship= education,= with= first= survey= implemented= 1971,= second= one= 1999,= third= 2009.= = p

Observational Astrophysics Pierre Lena,2013-03-09 For the last twenty years astronomy has been developing dramatically. Until the nineteen-fifties, telescopes, spectrometers, and photographic plates consti tuted a relatively simple set of tools which had been refined to a high degree of perfection by the joint efforts of physicists and astronomers. Indeed these tools helped at the birth of modern astrophysics: the discovery of the expan sion of the Universe. Then came radioastronomy and the advent of electronics; the last thirty years have seen the application to astrophysics of a wealth of new experimental techniques, based on the most advanced fields of physics, and a constant interchange of ideas between physicists and astronomers. Last, but not least, modern computers have sharply reduced the burden of dealing with the information painfully extracted from the skies, whether from ever scarce photons, or from the gigantic data flows provided by satellites and large telescopes. The aim of this book is not to give an extensive overview of all the tech niques currently in use in astronomy, nor to provide detailed instructions for preparing or carrying out an astronomical project. Its purpose is methodologi cal: photons are still the main carriers of information between celestial sources and the observer. How we are to collect, sample, measure, and store this infor mation is the unifying theme of the book. Rather than the diversity of tech niques appropriate for each wavelength range, we emphasize the physical and mathematical bases which are common to all wavelength regimes.

A Briefer History of Time Leonard Mlodinow,Stephen Hawking,2010-01-26 Like prior editions of the book - but even more so - A Briefer History of Time will guide non-scientists everywhere in the ongoing search for the tantalizing secrets at the heart of time and space . . . This is Stephen Hawking's somewhat 'briefer' account of his up-to-date and most recent scientific observations and findings. A great companion to his original worldwide bestseller, A Brief History of Time. From curved space to quantum theory, the authors have expanded on areas of special interest and recent progress, such as developments in string theory and exciting progress in the search for a force of complete, unified theory of all the forces of physics. Thirty-eight full-colour illustrations enhance the text and make A Briefer History of Time an exhilarating addition in its own right to the literature of science.

Becoming Citizens in a Changing World Wolfram Schulz, John Ainley, Julian Fraillon, Bruno Losito, Gabriella Agrusti, Tim Friedman, 2018-05-15 This open access book presents the results from the second cycle of the IEA International Civic and Citizenship Education Study (ICCS 2016). Using data from 24 countries in Asia, Europe and Latin America, the study investigates the ways in which young people are prepared to undertake their roles as citizens in a range of countries in the second decade of the 21st century. It also responds to the enduring and emerging challenges of educating young people in a world where contexts of democracy and civic participation continue to change. New developments of this kind include the increase in the use of social media by young people as a tool for civic engagement, growing concerns about global threats and sustainable development, as well as the role of schools in fostering peaceful ways of interaction between young people. Besides enabling the evaluation of a wide range of aspects of civic and citizenship education, including those related to recent developments in a number of countries, the inclusion of test and questionnaire material from the first cycle of the study in 2009 allows the results from ICCS 2016 to be used to examine changes in civic knowledge, attitudes and engagement over seven years.
