From Columbus to ConAgra Alessandro Bonanno, 1994 This examination of the role of agriculture and food in the new international division of labor argues that the globalized economy creates new winners and losers.

Young Citizens and New Media Peter Dahlgren, 2013-10-11 This book integrates four distinct topics: young people, citizenship, new media, and learning processes. When taken together, these four topics merge to define an arena of social and research attention that has become compelling in recent years. The general international concern expressed of declining democratic engagement and the role of citizenship today becomes all the more acute when it turns to younger people. At the same time, there is growing attention being paid to the potential of new media - especially internet and mobile telephony - to play a role in facilitating newer forms of political participation. It is clear that many of the present manifestations of 'new politics' in the extra parliamentary domain, not only make sophisticated use of such media, but are indeed highly dependent on them. With an impressive array of contributors, this book will appeal to those interested in a number of spheres, including media and cultural studies, political science, pedagogy, and sociology.

Geography and Revolution David N. Livingstone, Charles W. J. Withers, 2010-08-15 A term with myriad associations, revolution is commonly understood in its intellectual, historical, and sociopolitical contexts. Until now, almost no attention has been paid to revolution and questions of geography. Geography and Revolution examines the ways that place and space matter in a variety of revolutionary situations. David N. Livingstone and Charles W. J. Withers assemble a set of essays that are themselves revolutionary in uncovering not only the geography of revolutions but the role of geography in revolutions. Here, scientific revolutions—Copernican, Newtonian, and Darwinian—ordinarily thought of as placeless, are revealed to be

rooted in specific sites and spaces. Technical revolutions—the advent of print, time-keeping, and photography—emerge as inventions that transformed the world's order without homogenizing it. Political revolutions—in France, England, Germany, and the United States—are notable for their debates on the nature of political institutions and national identity. Gathering insight from geographers, historians, and historians of science, *Geography and Revolution* is an invitation to take the where as seriously as the who and the when in examining the nature, shape, and location of revolutions.

Sidewalks Anastasia Loukaitou-Sideris, Renia Ehrenfeucht, 2009 Urban sidewalks, critical but undervalued public spaces, have been sites for political demonstrations and urban greening, promenades for the wealthy and the well-dressed, and shelterless shelters for the homeless. On sidewalks, decade after decade, urbanites have socialized, paraded and played, sold their wares, and observed city life. These uses often overlap and conflict, and urban residents and planners try to include some and exclude others. In this first book-length analysis of the sidewalk as a distinct public space, Anastasia Loukaitou-Sideris and Renia Ehrenfeucht examine the evolution of the American urban sidewalk and trace conflicts that have arisen over its competing uses. They discuss the characteristics of sidewalks as small urban public spaces, and such related issues as the ambiguous boundaries of their 'public' status, contestation around specific uses, control and regulations, and the implications for First Amendment speech and assembly rights. Drawing on historical and contemporary examples as well as case study research and archival data from five cities - Boston, Los Angeles, New York, Miami, and Seattle - the authors focus on how the functions and meanings of street activities have shifted and have been negotiated through controls and interventions. They consider sidewalk uses that include the display of individual and group identities (in ethnic and pride parades, for example), the everyday politics of sidewalk access, and larger political actions (including Seattle's 1999 antiglobalization protests), and examine the complex regulatory frameworks that manage street and sidewalk life. The role of urban sidewalks in the early twenty-first century depends, the authors conclude, on what we want from sidewalk life and how we balance competing interests.

Mind and Places Anna Anzani, 2020-05-12 This book explores the contributions of psychological, neuroscientific and philosophical perspectives to the design of contemporary cities. Pursuing an innovative and multidisciplinary approach, it addresses the need to re-launch knowledge and creativity as major cultural and institutional bases of human communities. Dwelling is a form of knowledge and re-invention of reality that involves both the tangible dimension of physical places and their mental representation. Findings in the neuroscientific field are increasingly opening stimulating perspectives on the design of spaces, and highlight how our ability to understand other people is strongly related to our corporeity. The first part of the book focuses on the contributions of various disciplines that deal with the spatial dimension, and explores the dovetailing roles that science and art can play from a multidisciplinary perspective. In turn, the second part formulates

proposals on how to promote greater integration between the aesthetic and cultural dimension in spatial design. Given its scope, the book will benefit all scholars, academics and practitioners who are involved in the process of planning, designing and building places, and will foster an international exchange of research, case studies, and theoretical reflections to confront the challenges of designing conscious places and enable the development of communities.

Climate Change and Groundwater Walter Dragoni,Balbir S. Sukhija,2008 There is a general consensus that for the next few decades at least, the Earth will continue its warming. This will inevitably bring about serious environmental problems. For human society, the most severe will be those related to alterations of the hydrological cycle, which is already heavily influenced by human activities. Climate change will directly affect groundwater recharge, groundwater quality and the freshwater-seawater interface. The variations of groundwater storage inevitably entail a variety of geomorphological and engineering effects. In the areas where water resources are likely to diminish, groundwater will be one of the main solutions to prevent drought. In spite of its paramount importance, the issue of 'Climate Change and Groundwater' has been neglected. This volume presents some of the current understanding of the topic.

The City at Eye Level Meredith Glaser,2012 Although rarely explored in academic literature, most inhabitants and visitors interact with an urban landscape on a day-to-day basis is on the street level. Storefronts, first floor apartments, and sidewalks are the most immediate and common experience of a city. These plinths are the ground floors that negotiate between inside and outside, the public and private spheres. The City at Eye Level qualitatively evaluates plinths by exploring specific examples from all over the world. Over twenty-five experts investigate the design, land use, and road and foot traffic in rigorously researched essays, case studies, and interviews. These pieces are supplemented by over two hundred beautiful color images and engage not only with issues in design, but also the concerns of urban communities. The editors have put together a comprehensive guide for anyone concerned with improving or building plinths, including planners, building owners, property and shop managers, designers, and architects.

Redeeming the Text Charles Martindale,1993 This book applies some of the procedures of modern critical theory (in particular reception-theory, deconstruction, theories of dialogue and the hermeneutics associated with the German philosopher Gadamer) to the interpretation of Latin poetry. Charles Martindale argues that we neither can nor should

attempt to return to an 'original' meaning for ancient poems, free from later accretions and the processes of appropriation; more traditional approaches to literary enquiry conceal a metaphysics which has been put in question by various anti-foundationalist accounts of the nature of meaning and the relationship between language and what it describes. From this perspective the author examines different readings of the poetry of Virgil, Ovid, Horace and Lucan, in order to suggest alternative ways in which those texts might more profitably be read. Finally he focuses on a key term for such study 'translation' and examines the epistemological questions it raises and seeks to circumvent.

A History of Florence, 1200 - 1575 John M. Najemy, 2008-04-15 In this history of Florence, distinguished historian John Najemy discusses all the major developments in Florentine history from 1200 to 1575. Captures Florence's transformation from a medieval commune into an aristocratic republic, territorial state, and monarchy Weaves together intellectual, cultural, social, economic, religious, and political developments Academically rigorous yet accessible and appealing to the general reader Likely to become the standard work on Renaissance Florence for years to come

The Bauhaus Magdalena Droste, 2015 In a fleeting fourteen year period, sandwiched between two world wars, Germany's Bauhaus school of art and design changed the face of modernity. With utopian ideals for the future, the school developed a pioneering fusion of fine art, craftsmanship, and technology to be applied across painting, sculpture, design, architecture, film, photography, textiles, ceramics, theatre, and installation. As much an intense personal community as a publicly minded collective, the Bauhaus was first founded by Walter Gropius (1883-1969), and counted Josef and Anni Albers, Wassily Kandinsky, Paul Klee, Oskar Schlemmer, Gunta St lzl, Marianne Brandt and Ludwig Mies van der Rohe among its members. Between its three successive locations in Weimar, Dessau and Berlin, the school fostered charismatic and creative exchange between teachers and students, all varied in their artistic styles and preferences, but united in their idealism and their interest in a total work of art across different practices and media. This book celebrates the adventurous innovation of the Bauhaus movement, both as a trailblazer in the development of modernism, and as a paradigm of art education, where an all-encompassing freedom of creative expression and cutting-edge ideas led to functional and beautiful creations.

The Illustrated Virago Book of Women Travellers Mary Morris, Larry O'Connor, 2000 Three hundred years of wanderlust are captured in this beautiful new illustrated edition of the VIRAGO BOOK OF WOMEN TRAVELLERS. Some of the women are observers of the world in which they wander and others are more active. Often they are storytellers, weaving tales about the people they encounter and whether it is curiosity about the world or escape from personal tragedy, these women approached their journeys with wit, intelligence, compassion and empathy for the lives of others. The constraints and perils, the perceptions and complex emotions women journey with are different and for many women, the inner landscape is as important as the outer. This does not mean that the woman traveller is not politically aware, historically astute or in touch with the customs and language of the place but it does mean that a woman cannot travel and not be aware of her body and

the limitations her sex presents.

A Research Agenda for Geographic Information Science Robert B. McMaster,E. Lynn Usery,2004-08-30 A close relationship exists between GIS and numerous applications, including cartography, photogrammetry, geodesy, surveying, computer and information science, and statistics, among others. Scientists coined the term geographic information science (GIScience) to describe the theory behind these fields. A Research Agenda for Geographic Information Science extensively details the issues and fundamental scientific problems that must be solved if the use of GIS in these and other fields is to advance. Immediately following the founding of the University Consortium for Geographic Information Science (UCGIS), the group identified in a Research Agenda the topics that represented major challenges to the GIS research community. The first chapter of this book delivers an introduction to the agenda and to the collective guidance that the agenda provides to researchers. Chapters 2-10 discuss nine original research challenges. Chapters 11-14 provide the basis of the agenda's four Emerging Themes. Each chapter, written by researchers involved in the conception of the topics, discusses basic research elements, the UCGIS approach, the need for the National research agenda, contributions to knowledge and society, and offers a complete set of references. The final section draws general conclusions about the UCGIS approach and the defined research challenges.
