The Use and Abuse of History Marc Ferro, 2004-06 Use and Abuse of History has become a key text of current historiography; this is a book that poses fundamental and disturbing questions about the use and abuse of history. Engaging and challenging, this book confronts the reader with the many 'histories' that exist and have existed around the world, from the Zulu kingdoms to Communist China. This title has now been extensively revised by Marc Ferro, a well respected historian, and presents the different narratives that constitute the histories of countries as diverse as India, Iran, Trinidad and the United States makes for fascinating reading in their own right. What makes this book so valuable, though, is what these narratives tell us about the societies which create them - how much is history distorted in order to condition the minds of those who are taught it? Use and Abuse of History appeals to anyone with a general interest in history.

Proceedings of the 1st International Conference on Smart Innovation, Ergonomics and Applied Human Factors (SEAHF) César Benavente-Peces, Sami Ben Slama, Bassam Zafar, 2020-08-14 This book addresses a range of real-world issues including industrial activity, energy management, education, business and health. Today, technology is a part of virtually every human activity, and is used to support, monitor and manage equipment, facilities, commodities, industry, business, and individuals' health, among others. As technology evolves, new applications, methods and techniques arise, while at the same time citizens' expectations from technology continue to grow. In order to meet the nearly insatiable demand for new applications, better performance and higher reliability, trustworthiness, security, and power consumption efficiency, engineers must deliver smart innovations, i.e., must develop the best techniques, technologies and services in a way that respects human beings and the environment. With that goal in mind, the key topics addressed in this book are: smart technologies and artificial intelligence, green energy systems, aerospace engineering/robotics and IT, information security and mobile engineering, IT in bio-medical engineering and smart agronomy, smart marketing, management and tourism policy, technology and education, and hydrogen and fuel-cell energy technologies.
