Handbook of Energy Efficiency and Renewable Energy D. Yogi Goswami, Frank Kreith, 2007-05-07 Brought to you by the creator of numerous bestselling handbooks, the Handbook of Energy Efficiency and Renewable Energy provides a thorough grounding in the analytic techniques and technological developments that underpin renewable energy use and environmental protection. The handbook emphasizes the engineering aspects of energy conservation and renewable energy. Taking a world view, the editors discuss key topics underpinning energy efficiency and renewable energy systems. They provide content at the forefront of the contemporary debate about energy and environmental futures. This is vital information for planning a secure energy future. Practical in approach, the book covers technologies currently available or expected to be ready for implementation in the near future. It sets the stage with a survey of current and future world-wide energy issues, then explores energy policies and incentives for conservation and renewable energy, covers economic assessment methods for conservation and generation technologies, and discusses the environmental costs of various energy generation technologies. The book goes on to examine distributed generation and demand side management procedures and gives a perspective on the efficiencies, economics, and environmental costs of fossil and nuclear technologies. Highlighting energy conservation as the cornerstone of a successful national energy strategy, the book covers energy management strategies for industry and buildings, HVAC controls, co-generation, and advances in specific technologies such as motors, lighting, appliances, and heat pumps. It explores energy storage and generation from renewable sources and underlines the role of infrastructure security and risk analysis in planning future energy transmission and storage systems. These features and more make the Handbook of Energy Efficiency and Renewable Energy the tool for designing the energy sources of the future.

Non-Conventional Materials and Technologies Khosrow Ghavami, Pedro Jesús Herrera Franco, 2018-11-25 The book presents new research in the area of biobased “green composites”. Biobased materials involve renewable agricultural and forestry feedstocks, including wood, agricultural waste, grasses and natural plant fibers. These lignocellulosic materials are composed mainly of carbohydrates such as sugar and lignin, cellulose, vegetable oils and proteins. Much research is concerned with renewable materials such as bamboo, vegetable fibers, soil composites and recycled materials such as rice husk ash and sugar cane ash. The general aim here is to use renewable and non-polluting materials in ways that offer a high degree of sustainability and preserve the remaining natural resources for future generations. Keywords: Biobased Materials, Renewable Materials, Non-polluting Materials, Sustainability, Wood, Agricultural Waste, Grasses, Natural Plant Fibers, Lignocellulosic Materials, Carbohydrates, Sugars, Lignin, Cellulose, Vegetable Oils, Proteins, Bamboo, Vegetable Fibers, Soil Composites, Recycled Materials, Rice Husk Ash, Sugar Cane Ash, Fiber-reinforced Concrete, Post-disaster Reconstruction, Guadua Fibers, Prefabricated Bamboo Guadua Panels, Multi-Level Bamboo Structures, Alkaline Activated Cements, Polymer Residues Reinforced with Glass Fiber, Composites Reinforced with Vegetal Fibers, Sisal Fibers, Bamboo Arch Structure, Adobe Reinforced with Wheat Fibers, Fiber Reinforced Microconcrete, Cements with High Coal Waste Contents, Natural Composites, Geopolymer Concretes.

Sudarshan, 1997 Now in its third edition, this text has been thoroughly revised to include new material on object-oriented systems, distributed systems and SQL. It also covers advanced topics such as: spatial and geographic databases; information retrieval systems; and distributed information systems.

Christian and Critical English Language Educators in Dialogue Mary Shepard Wong, Suresh Canagarajah, 2009-06-25 The legacy of English teaching and Christian missionaries is a flashpoint within the field of English language teaching. This critical examination of the place of Christianity in the field is unique in presenting the voices of TESOL professionals from a wide range of religious and spiritual perspectives. About half identify themselves as Christian while the others identify themselves as Buddhist, atheist, spiritualist, and variations of these and other faiths. What is common for all the authors is

their belief that values have an important place in the classroom. What they disagree on is whether and how spiritual values should find expression in learning and teaching. This volume dramatizes how scholars in the profession wrestle with ideological, pedagogical, and spiritual dilemmas as they seek to understand the place of faith in education. To sustain this conversation, the book is structured dialogically. Each section includes a set of position chapters in which authors explain their views of faith/pedagogy integration, a set of chapters by authors responding to these positions while articulating their own views on the subject, and discussion questions to engage readers in comparing the positions of all the authors, reflecting on their own experiences and values, and advancing the dialogue in fresh and personal directions.

The NNEST Lens Ahmar Mahboob,2010-02-19 The NNEST Lens invites you to imagine how the field of TESOL and applied linguistics can develop if we use the multilingual, multicultural, and multinational perspectives of a NNEST (Non Native English Speakers in TESOL) lens to re-examine our assumptions, practices, and theories in the field. The NNEST lens as described in and developed through this volume is a lens of multilingualism, multinationalism, and multiculturalism through which NNESTs and NESTs—as classroom practitioners, researchers, and teacher educators—take diversity as a starting point in their understanding and practice of their profession. The 16 original contributions to this volume include chapters that question theoretical frameworks and research approaches used in studies in applied linguistics and TESOL, as well as chapters that share strategies and approaches to classroom teaching, teacher education, and education management and policy. As such, this volume will be of interest to a wide range of students, practitioners, researchers, and academics in the fields of education and linguistics.

Education and the Rise of the Global Economy Joel Spring,1998-09-01 Joel Spring investigates the role of educational policy in the evolving global economy, and the consequences of school systems around the world adapting to meet the needs of international corporations. The new global model for education addresses problems of technological change, the quick exchange of capital, and free markets; policies to resolve these problems include lifelong learning, learning societies, international and national accreditation of work skills; international and national standards and tests; school choice; multiculturalism; and economic nationalism. The distinctive contribution Spring makes is to offer an original interpretive framework for examining and understanding the interconnections among education, imperialism and colonialism, and the rise of the global economy. He offers a unique comparison of the educational policies of the World Bank, the United Nations, the European Union, and the Organization for Economic Development and Cooperation. Additionally, he provides and weaves together important historical and current information on education in the context of the expansion of international capitalism; much of this information, gathered from many diverse sources, is otherwise not easily available to readers of this book. In the concluding chapters of the volume, Spring presents a thoughtful analysis and a powerful argument emphasizing the importance of human rights education in a global economy. This volume is a sequel to Spring's earlier book, *Education and the Rise of the Corporate State* (1972), continuing the work he has been engaged in since the 1970s to describe and analyze the relationship between political, economic, and historical forces and educational policy.

Contributors to the volume include: Monika Bedernak, Anne Burns, Helen Caple, Paul Dwyer, Masumi Kai, Hyeran Lee, Alan Libert, Caroline Lipovsky, Ahmar Mahboob, J R Martin, Alastair Pennycook, Montri Tangpijaikul, Michael Walsh, and Michele Zappavigna.

White Love and Other Events in Filipino History Vicente L. Rafael,2014-06-18 In this wide-ranging cultural and political history of Filipinos and the Philippines, Vicente L. Rafael examines the period from the onset of U.S. colonialism in 1898 to the emergence of a Filipino diaspora in the 1990s. Self-consciously adopting the essay form as a method with which to disrupt epic conceptions of Filipino history, Rafael treats in a condensed and concise manner clusters of historical detail and reflections that do not easily fit into a larger whole. *White Love and Other Events in Filipino History* is thus a view of nationalism as an unstable production, as Rafael reveals how, under what circumstances, and with what effects the concept

of the nation has been produced and deployed in the Philippines. With a focus on the contradictions and ironies that suffuse Filipino history, Rafael delineates the multiple ways that colonialism has both inhabited and enabled the nationalist discourse of the present. His topics range from the colonial census of 1903-1905, in which a racialized imperial order imposed by the United States came into contact with an emergent revolutionary nationalism, to the pleasures and anxieties of nationalist identification as evinced in the rise of the Marcos regime. Other essays examine aspects of colonial domesticity through the writings of white women during the first decade of U.S. rule; the uses of photography in ethnology, war, and portraiture; the circulation of rumor during the Japanese occupation of Manila; the reproduction of a hierarchy of languages in popular culture; and the spectral presence of diasporic Filipino communities within the nation-state. A critique of both U.S. imperialism and Filipino nationalism, *White Love and Other Events in Filipino History* creates a sense of epistemological vertigo in the face of former attempts to comprehend and master Filipino identity. This volume should become a valuable work for those interested in Southeast Asian studies, Asian-American studies, postcolonial studies, and cultural studies.

Political Independence with Linguistic Servitude Samuel Gyasi Obeng, Beverly Hartford, 2002 This book addresses important issues to the democratisation and development initiatives of developing countries. In many former colonies, the government remains centralised, and many in the population are unable to fully participate in its functioning. A critical difference between being a subject and a citizen is the ability to partake in governance. Such involvement requires knowledge, literacy, and the availability of literature in local and national languages. This book challenges policy makers and scholars to find creative ways of fostering political empowerment through developing language programmes.

Flying Insects and Robots Dario Floreano, Jean-Christophe Zufferey, Mandyam V. Srinivasan, Charlie Ellington, 2009-10-23 Flying insects are intelligent micromachines capable of exquisite maneuvers in unpredictable environments. Understanding these systems advances our knowledge of flight control, sensor suites, and unsteady aerodynamics, which is of crucial interest to engineers developing intelligent flying robots or micro air vehicles (MAVs). The insights we gain when synthesizing bioinspired systems can in turn benefit the fields of neurophysiology, ethology and zoology by providing real-life tests of the proposed models. This book was written by biologists and engineers leading the research in this crossdisciplinary field. It examines all aspects of the mechanics, technology and intelligence of insects and insectoids. After introductory-level overviews of flight control in insects, dedicated chapters focus on the development of autonomous flying systems using biological principles to sense their surroundings and autonomously navigate. A significant part of the book is dedicated to the mechanics and control of flapping wings both in insects and artificial systems. Finally hybrid locomotion, energy harvesting and manufacturing of small flying robots are covered. A particular feature of the book is the depth on realization topics such

as control engineering, electronics, mechanics, optics, robotics and manufacturing. This book will be of interest to academic and industrial researchers engaged with theory and engineering in the domains of aerial robotics, artificial intelligence, and entomology.
