Charles Donahue

Men, Women and Madness Joan Busfield, 2017-03-01 This book focuses on the complex patterning of mental disorder identified in men and women. The first part of the book examines the gendered landscape of mental disorder, key concepts and approaches, and the way in which gender is embedded in constructs of mental disorder. The second part considers theories of the causes of mental disorder and the extent to which the different causes can account for the gendered landscape of disorder. It concludes with a discussion of the policy implications of the analysis.

Alienation in Perversions Masud Khan, 2018-03-22 Perversions and borderline states were, by accident of fate, Masud Khan's chief preoccupation in his clinical work during the last three decades of his life. In an earlier volume, *The Privacy of the Self*, he presented what he called the natural and private crystallization of his experience with his patients and teachers; notably, in the latter category, Anna Freud, John Rickman and D.W. Winnicott. In this later book he takes his cue from Freud who, as he says, diagnosed the sickness of Western Judaeo-Christian cultures in terms of the person alienated from himself. Masud Khan's basic argument, succinctly stated in his Preface, is that the pervert puts an impersonal object between his desire and his accomplice. This object can be a stereotype fantasy, a gadget or a pornographic image. All three alienate the pervert from himself, as, alas, from the object of desire. With its wealth of clinical and theoretical insights, Masud Khan's *Alienation in Perversions* makes a major contribution to our understanding of perversion formation.

The Privacy of the Self Masud Khan, 2018-03-26 *The Privacy of the Self* was the first collection of papers showing the development of the author's thinking over twenty five years of clinical work. He was nurtured in the tradition of Anna Freud, John Rickman and D.W. Winnicott, but his contribution to psychoanalytic literature was a distinctive and personal one. What emerges from this book is the natural and private crystallization of his experiences with his patients and teachers. As he says in his preface: Psychoanalysis is an extremely private discipline of sensibility and skill. The practice of psychoanalysis multiplies this privacy into a specialized relationship between two persons, who through the very nature of their exclusivity

with each other change each other. The first thing I wish to say about my work reported in these papers is that my patients have helped me become and personalize my potential of thought, affectivity and effort into a way of life that I find deeply satisfying.

Eating Disorders and Obesity Christopher G. Fairburn,Kelly D. Brownell,2005-07-01 This unique handbook presents and integrates virtually all that is currently known about eating disorders and obesity in one authoritative, accessible, and eminently practical volume. From leading international authorities, 112 concise chapters encapsulate the latest information on all pertinent topics, from biological, psychological, and social processes associated with risk, to clinical methods for assessment and intervention. The contents are organized to highlight areas of overlap between lines of research that often remain disparate. Suggestions for further reading at the end of each chapter replace extended references and enhance the practical value and readability of the volume.

Handbook of Treatment for Eating Disorders David M. Garner,Paul E. Garfinkel,1997-04-18 Updated to reflect recent DSM categorizations, this edition includes coverage of binge-eating disorder and examines pharmacological as well as psychotherapeutic approaches to treating eating disorders.

Napoleon's Integration of Europe Stuart Woolf,2002-11-01 Histories of the Napoleonic period are almost exclusively biographies of the man, or political-military accounts of his wars. But such wars were only the first stage in a far more ambitious programme; the establishment of a rational state which would force the pace of modernising society. Through an examination of the experiences of French domination, Napoleon's Integration of Europe explores the implications of such a project for France and its relationship with the rest of Europe. It examines the problems of ruling a progressively expanding empire, as seen through the eyes of a trained corps of bureaucrats who were convinced that their scientific methods would enable them to understand and govern the mechanisms of society. However it also looks at the populations subjected to French rule, at the nature of their resistance and adaptation to the principles of the Napoleonic project. This book is the first overall comparative study of Europe in the Napoleonic years. It is a study not only of an early exercise in imperialism, but of the conflict that is aroused between the rationalising tendencies of the modern state and the spatial and cultural heterogeneity of individual societies. As well as a history of France, it is also a history of Italy, Germany, Belgium, Holland, Switzerland, Poland and Spain at a crucial moment in the history of each nation state.

The Science and Fiction of Autism Laura Ellen Schreibman,2009-06-30 Drawing from her long clinical experience, Laura Schreibman argues that autism is an entirely biological disorder, however complex its neurological origins. She dismisses theories that it is caused by 'refrigerator mothers' or the MMR vaccine, as well as simplistic claims that it can be cured.

American Psychiatric Association Practice Guidelines American Psychiatric Association,1996 The aim of the American Psychiatric Association Practice Guideline series is to improve patient care. Guidelines provide a comprehensive synthesis of all available information relevant to the clinical topic. Practice guidelines can be vehicles for educating psychiatrists, other medical and mental health professionals, and the general public about appropriate and inappropriate treatments. The series also will identify those areas in which critical information is lacking and in which research could be expected to improve clinical decisions. The Practice Guidelines are also designed to help those charged with overseeing the utilization and reimbursement of psychiatric services to develop more scientifically based and clinically sensitive criteria.

The Witch-Hunt in Early Modern Europe Brian P. Levack,2013-11-05 Between 1450 and 1750 thousands of people - most of them women - were accused, prosecuted and executed for the crime of witchcraft. The witch-hunt was not a single event; it comprised thousands of individual prosecutions, each shaped by the religious and social dimensions of the particular area as well as political and legal factors. Brian Levack sorts through the proliferation of theories to provide a coherent introduction to the subject, as well as contributing to the scholarly debate. The book: Examines why witchcraft prosecutions took place, how many trials and victims there were, and why witch-hunting eventually came to an end. Explores the beliefs of both educated and illiterate people regarding witchcraft. Uses regional and local studies to give a more detailed analysis of the chronological and geographical distribution of witch-trials. Emphasises the legal context of witchcraft prosecutions. Illuminates the social, economic and political history of early modern Europe, and in particular the position of women within it. In this fully updated third edition of his exceptional study, Levack incorporates the vast amount of literature that has emerged since the last edition. He substantially extends his consideration of the decline of the witch-hunt and goes further in his exploration of witch-hunting after the trials, especially in contemporary Africa. New illustrations vividly depict beliefs about witchcraft in early modern Europe.

Institutional Review Board Elizabeth A. Bankert,Robert J. Amdur,2006 This comprehensive reference covers three separate areas related to IRBs: administration, daily management; and ethical issues. This instructional manual provides IRB members and administrators with the information they need to run an efficient and effective system of protecting human research subjects, while remaining in compliance with federal research regulations. The text includes case studies, sample forms, and sample policy documents. The updated Second Edition includes seven new chapters: IRB Closure of Study Files, Internet Research, Research in Public Schools, Phase I Clinical Trials in Healthy Volunteers, Vulnerability in Research,

Balancing the Risks and Potential Benefits, and HIPAA.

A Philosophy of Mass Art Noël Carroll, 1998 We live in a world dominated by mass art. Movies, TV, pulp literature, comics, rock music--both broadcast and recorded--surround us everywhere in the industrialized world and beyond. However, despite the fact that for the majority mass art supplies the primary source of aesthetic experience, the area has been neglected entirely by analytic philosophers of art. In *The Philosophy of Mass Art*, Noel Carroll, a leading figure in the field of aesthetic philosophy, attempts to address that lacuna. He shows why philosophers have previously resisted and/or misunderstood mass art and he develops frameworks for understanding the relation of mass art to the emotions, morality, and ideology discussing the accounts of such theorists in the field as Collingwood, Adorno, Benjamin, McLuhan, and Fiske. Mixing conceptual analysis and many vivid examples, the author proposes the first significant attempt at a philosophy of mass art in the analytical tradition concluding there are strong grounds for approaching mass art in the same fashion as high art.

The Prose of the World Maurice Merleau-Ponty, 1973 The work that Maurice Merleau-Ponty planned to call *The Prose of the World*, or *Introduction to the Prose of the World*, was unfinished at the time of his death. The book was to constitute the first section of a two-part work whose aim was to offer, as an extension of his *Phenomenology of Perception*, a theory of truth. This edition's editor, Claude Lefort, has interpreted and transcribed the surviving typescript, reproducing Merleau-Ponty's own notes and adding documentation and commentary.

Source Book in Bioethics Albert R. Jonsen, Robert M. Veatch, LeRoy Walters, 1999-09-07 Government agencies and commissions, courts, and legislatures have during the past several decades produced reports, rendered decisions, and passed laws that have both defined the fundamental issues in the field of bioethics and established ways of managing them in our society. Providing a history of these key bioethical decisions, this *Source Book in Bioethics* is the first and only comprehensive collection of the critical public documents in biomedical ethics, including many hard-to-find or out-of-print materials. Covering the period from 1947 to 1995, this volume brings together core legislative documents, court briefs, and reports by professional organizations, public bodies, and governments around the world. Sections on human experimentation, care of the terminally ill, genetics, human reproduction, and emerging areas in bioethics include such pivotal works as *The Nuremberg Code*, *The Tuskegee Report*, and *In the Matter of Baby M*, as well as less readily available documents as *The Declaration of Inuyama*, the Council for International Organizations of Medical Sciences statement on genetic engineering, and *The Warnock Committee Report on reproductive technologies* from the United Kingdom. Three eminent scholars in the field provide brief introductions to each document explaining the significance of these classic sources. This historical volume will be a standard text for courses in bioethics, health policy, and death and dying, and a primary reference for anyone interested in this increasingly relevant field.

Three Dialogues on Knowledge Paul K. Feyerabend, 1991-08-26 The Socratic, or dialog, form is central to the history of philosophy and has been the discipline's canonical genre ever since. Paul Feyerabend's *Three Dialogues on Knowledge* resurrects the form to provide an astonishingly flexible and invigorating analysis of epistemological, ethical and metaphysical problems. He uses literary strategies - of irony, voice and distance - to make profoundly philosophical points about the epistemic, existential and political aspects of common sense and scientific knowledge. He writes about ancient and modern relativism; the authority of science; the ignorance of scientists; the nature of being; and true and false enlightenment. Throughout *Three Dialogues on Knowledge* is provocative, controversial and inspiring. It is, unlike most current philosophical writing, written for readers with a keen sense of what matters and why.

Clinical Behavioral Medicine for Small Animals Karen L. Overall, 1997 The book focuses on diagnostic and treatment approaches for the major classes of behaviour problems that are seen in cats and dogs. Each kind of problem, from aggressive behaviour to self-mutilation and elimination disorders is discussed, offering step-by-step guidelines. Contemporary pharmacological treatments are also examined.
