*Dolmens in the Levant* James A. Fraser, 2018-01-17 When Western explorers first encountered dolmens in the Levant, they thought they had discovered the origins of a megalithic phenomenon that spread as far as the Atlantic coast. Although European dolmens are now considered an unrelated tradition, many researchers continue to approach dolmens in the Levant as part of a trans-regional phenomenon that spanned the Taurus mountains to the Arabian peninsula. By tightly defining the

term 'dolmen' itself, this book brings these mysterious monuments into sharper focus. Drawing on historical, archaeological and geological sources, it is shown that dolmens in the Levant mostly concentrate in the eastern escarpment of the Jordan Rift Valley, and in the Galilean hills. They cluster near proto-urban settlements of the Early Bronze I period (3700–3000 BCE) in particular geological zones suitable for the extraction of megalithic slabs. Rather than approaching dolmens as a regional phenomenon, this book considers dolmens as part of a local burial tradition whose tomb forms varied depending on geological constraints. Dolmens in the Levant is essential for anyone interested in the rise of civilisations in the ancient Middle East, and particularly those who have wondered at the origins of these enigmatic burial monuments that dominate the landscape.

*Brandeis University* Abram Leon Sachar,1995 In this engaging account, the first president of Brandeis tells how many formidable obstacles to launching a new university without initial capital endowment or any hope of alumni support for at least a generation were overcome; how academic goals were drafted, distinguished faculty recruited, and chairs endowed; and how a dilapidated campus was expended into a well-organized plant of some 90 buildings. In this revision of the 1976 edition, Abram L. Sachar expands the scope of his commentary and imbues it with a critical depth and objectivity that comes from 20 additional years of active involvement in the service of the university.

Transfusion in the Intensive Care Unit Nicole P. Juffermans, Timothy S. Walsh, 2014-10-20 Due to a high incidence of anemia, critically ill patients are frequently transfused, with up to 40% of patients receiving a transfusion during their stay in the Intensive Care Unit. It has become increasingly clear that there is an association between transfusion and adverse outcomes, underlining the need for a careful assessment of the risks and benefits of a blood transfusion. In the last decade, there have been several large clinical trials that have studied red blood cell transfusion triggers in various ICU patient populations, allowing us to take a personalized approach to transfusion. Moreover, ICU patients often suffer from coagulopathy. Recent studies have addressed the effectiveness of fresh frozen plasma and platelets to prevent or treat bleeding. Aiming at a personalized therapy approach in transfusion practice, this book is the first to offer a comprehensive summary of transfusion triggers for red blood cells in specific ICU patient populations and specific conditions. In addition, it discusses evidence for triggers for plasma and platelets and outlines the most common adverse effects of transfusion in the ICU. *Transfusion in the Intensive Care Unit* is a practical handbook that can be used in everyday practice to guide transfusion and thus will serve as a valuable resource for physicians, fellows and residents working in Intensive Care,

Anesthesiology and Cardiac Surgery.

Natural Heritage from East to West Niki Evelpidou, Tomás Figueiredo, Francesco Mauro, Vahap Tecim, Andreas Vassilopoulos, 2010-01-19 Cumulative global transformations, occurring daily, affect important aspects of our life. Characteristic cultural and natural heritage, including sites of priceless value, is under constant threat. There are growing pressures, of both natural and human origin, such as wars, conflicts, natural or technological disasters and the effects of global climate change. These provoke the continuous degradation of many sites included in the World Heritage List. In consequence, immediate strategic measures must be taken. Natural heritage is our legacy from the past, that we inherited from our ancestors and pass on to future generations. It is vital to realize its value and protect it by all possible means, enforcing innovative and sustainable action plans that promote global international co-operation. This book aims to address specific natural heritage sites in Europe, from West to East. The six countries of study interest are Portugal, Malta, Greece, Italy, Romania and Turkey. For each case, the corresponding current status is presented. This is accompanied by recommended action plans for protection and conservation, training initiatives that improve the public awareness of natural heritage issues and efforts to estimate the natural/environmental value of the sites. The book is the overall result of an interregional initiative aiming to promote convergence, provoke public interest and recommend action for radical changes in our attitude towards heritage conservation.

Renewable Heating and Cooling Gerhard Stryi-Hipp, 2015-11-20 Renewable Heating and Cooling: Technologies and Applications presents the latest information on the generation of heat for industry and domestic purposes, an area where a significant proportion of total energy is consumed. In Europe, this figure is estimated to be almost 50%, with the majority of heat generated by the consumption of fossil fuels. As there is a pressing need to increase the uptake of renewable heating and cooling (RHC) to reduce greenhouse gas emissions, this book provides a comprehensive and authoritative overview on the topic. Part One introduces key RHC technologies and discusses RHC in the context of global heating and cooling demand, featuring chapters on solar thermal process heat generation, deep geothermal energy, and solar cooling technologies. Part Two explores enabling technologies, special applications, and case studies with detailed coverage of thermal energy storage, hybrid systems, and renewable heating for RHC, along with case studies in China and Sweden. Users will find this book to be an essential resource for lead engineers and engineering consultants working on renewable heating and cooling in engineering companies, as well as academics and R&D professionals in private research institutes who have a particular interest in the subject matter. - Includes coverage on biomass, solar thermal, and geothermal renewable heating and cooling technologies - Features chapters on solar thermal process heat generation, deep geothermal energy, solar cooling technologies, and special applications - Presents case studies with detailed coverage of thermal energy storage, hybrid systems, and renewable heating for RHC - Explores enabling technologies and special applications
