Breast Cytopathology M. Pinamonti, F. Zanconati,2017-11-27 Breast cytopathology is a field characterized by practicality and diagnostic efficacy. This book focuses mainly on morphology, with helpful hints for recognizing benign lesions and the main features of malignancy. It reviews specific features of various lesions and the consequences of the diagnosis for the management of the patient. Each chapter contains high-quality cytology images accompanying the descriptions, including comparison images to distinguish the most important morphological features and to help in the differential diagnosis. Fine needle aspiration cytology (FNAC) sampling and preparation technique, fixation, staining, and principles of its interpretation are covered. Immunocytochemistry and ancillary techniques are outlined, as well as the main clinical and radiological features of breast lesions, and the cytological diagnostics of axillary lymph nodes. This publication will be of great use to medical practitioners in their first approach to breast cytopathology, as well as to pathologists and cytotechnicians with little to moderate experience in the field.

Pelvic Floor Ultrasound Lewis Chan, Vincent Tse, Stephanie The, Peter Stewart, 2015-04-06 There is increasing interest in using ultrasound for assessment of pelvic floor disorders such as voiding dysfunction, pelvic organ prolapse and faecal incontinence. Ultrasound can also be a useful imaging modality for urodynamics and pelvic floor physiotherapy. Whilst ultrasound equipment is widely available around the world many clinicians may not have access to structured training in the technique of pelvic floor imaging and interpretation of images in the context of pelvic floor dysfunction. This book aims to provide the reader with the knowledge and skills to start utilising ultrasound imaging in assessment of pelvic floor disorders. The authors comprise the three surgical disciplines (urology, colorectal surgery and gynaecology) who commonly manage pelvic floor problems and have subspecialty expertise in pelvic floor imaging. They have conducted workshops in Australia, Asia, UK and USA and are advocates for clinician-performed ultrasound.

Dermatologic Ultrasound with Clinical and Histologic Correlations Ximena Wortsman, Gregor Jemec, 2013-07-02 Significant technological advances have produced equipment that allows imaging of the skin with variable frequency

ultrasound in previously unseen detail and provides a range of dynamic data that is currently unmatched by any other technology. *Dermatologic Ultrasound with Clinical and Histologic Correlations* is a comprehensive introduction to ultrasonography of the skin, nails, and scalp as it relates to the assessment and diagnosis of dermatologic diseases. It provides radiologists, sonographers, dermatologists, and physicians with interest in skin imaging with a concise understanding of the diagnosis of dermatologic conditions through extensive high-resolution gray scale and color Doppler ultrasound images and presents classical correlations of clinical dermatologic lesions with sonographic and histologic findings. Featuring more than 1700 images, this text-atlas provides an excellent starting point in learning about this topic. Featuring contributions from world-renowned authorities in the field of superficial ultrasound imaging, the book reviews the technical considerations relating to color Doppler ultrasound of the skin; surveys the dermatologic entities that can be visualized with ultrasound imaging, such as cutaneous tumors, inflammatory diseases, hemangiomas and vascular malformations, melanoma, nail tumors, scalp diseases and cosmetic conditions; shows common simulators of cutaneous diseases; and discusses protocols for assessing common dermatologic conditions. Inclusion of clinical overviews, tips, and pitfalls enables a better understanding of the pathologies of the disorders and the methodological approach in assessing these entities.

Imaging of Soft Tissue Tumors Filip M. Vanhoenacker, Arthur M. de Schepper, Paul M. Parizel, Jan L.M.A. Gielen, 2006-04-26 This richly illustrated book provides a comprehensive survey of the growing role of medical imaging studies in the detection, staging, grading, tissue characterization, and post-treatment follow-up of soft tissue tumors. For each tumor group, imaging findings are correlated with clinical, epidemiologic, and histologic data. The relative merits and indications of various imaging modalities are discussed and compared. Particular emphasis is placed on MRI because of its unique contrast resolution and multiplanar imaging capabilities. This third, revised and updated edition includes new chapters on genetics and molecular biology and on pathology of soft tissue tumors, with respect to the new World Health Organization (WHO) classification of soft tissue tumors. It aims to serve both as a systematic, descriptive textbook and as a rich pictorial database of soft tissue masses. The addition of numerous new illustrations of common and rare soft tissue tumors will further increase the scientific and educational value of this third edition.

The Milan System for Reporting Salivary Gland Cytopathology William C. Faquin, Esther Diana Rossi, Zubair Baloch, Güliz A. Barkan, Maria Pia Foschini, Daniel F.I. Kurtycz, Marc P. Pusztaszeri, Philippe Vielh, 2023-06-26 The Second Edition of *The Milan System for Reporting Salivary Gland Cytopathology*, like the First Edition, represents a collaborative effort by a multidisciplinary group of cytopathologists, surgical pathologists, molecular pathologists, radiologists, and head and neck surgeons. This international group shares the goal of creating a practical and uniform reporting system for salivary gland fine needle aspiration (FNA). This book is organized into six general diagnostic categories: "Non-Diagnostic," "Non-Neoplastic," "Atypia of Undetermined Significance (AUS)," "Neoplasm: Benign," "Neoplasm: Salivary Gland Neoplasm of Uncertain Malignant Potential (SUMP)," "Suspicious for Malignancy," and "Malignant." It includes definitions, morphologic criteria, and explanations for each of the diagnostic categories. Specific chapters are dedicated to the application of the latest available ancillary studies, radiologic features of salivary gland lesions, clinical management, and histological considerations including updates from the most recent 5th Edition WHO blue book. *The Milan System for Reporting Salivary Gland Cytopathology 2nd Edition* represents an essential step towards increasing the overall effectiveness of salivary gland FNA and fostering better communication between clinicians and between institutions to improve overall patient care.

Imaging of Soft Tissue Tumors Arthur M DeSchepper, Paul M. Parizel, Frank Ramon, Luc DeBeuckeleer, Jan E. Vandevenne, 2013-03-09 Only with the advent of computed tomography and magnetic resonance imaging have radiologists become familiar with this uncommon pathology. The emphasis here is on MRI, as it guarantees the most accurate diagnosis

of soft tissue tumours. Because of their rarity, multi-centric studies are necessary to collect statistically relevant numbers of these tumours and so assess the value of new imaging techniques in their detection, staging, grading, tissue characterisation, and post-treatment follow-up. This is a reflection of the work of a prestigious European study group of more than 30 such co-investigators - including experts on medical imaging - who collected more than 800 documented and histologically proven cases of soft tissue tumours. For each tumour type, 10-12 cases are shown, supported by 3-4 photos. Unsurpassed in its collection of case studies.
