Cadmium Telluride Quantum Dots John Donegan, Yury Rakovich, 2013-12-03 In the last two decades, semiconductor quantum dots—small colloidal nanoparticles—have garnered a great deal of scientific interest because of their unique properties. Among nanomaterials, CdTe holds special technological importance as the only known II-VI material that can form conventional p-n junctions. This makes CdTe very important for the development of novel optoelectronic devices such as light-emitting diodes, solar cells, and lasers. Moreover, the demand for water-compatible light emitters and the most common biological buffers give CdTe quantum dots fields a veritable edge in biolabeling and bioimaging. Cadmium Telluride Quantum Dots: Advances and Applications focuses on CdTe quantum dots and addresses their synthesis, assembly, optical properties, and applications in biology and medicine. It makes for a very informative reading for anyone involved in nanotechnology and will also benefit those scientists who are looking for a comprehensive account on the current state of quantum dot-related research.

Command Of The Air General Giulio Douhet, 2014-08-15 In the pantheon of air power spokesmen, Giulio Douhet holds center stage. His writings, more often cited than perhaps actually read, appear as excerpts and aphorisms in the writings of numerous other air power spokesmen, advocates and critics. Though a highly controversial figure, the very controversy that surrounds him offers to us a testimonial of the value and depth of his work, and the need for airmen today to become familiar with his thought. The progressive development of air power to the point where, today, it is more correct to refer to aerospace power has not outdated the notions of Douhet in the slightest. In fact, in many ways, the kinds of technological capabilities that we enjoy as a global air power provider attest to the breadth of his vision. Douhet, together with Hugh "Boom" Trenchard of Great Britain and William "Billy" Mitchell of the United States, is justly recognized as one of the three great spokesmen of the early air power era. This reprint is offered in the spirit of continuing the dialogue that Douhet himself so

perceptively began with the first edition of this book, published in 1921. Readers may well find much that they disagree with in this book, but also much that is of enduring value. The vital necessity of Douhet's central vision-that command of the air is all important in modern warfare-has been proven throughout the history of wars in this century, from the fighting over the Somme to the air war over Kuwait and Iraq.

If the Allies Had Fallen Dennis E. Showalter, Harold C. Deutsch, 2012-01-15 Leading historians suggest what might have been if key events during World War II had the war gone differently.

The Green Bicycle Haifaa Al Mansour, 2015-09-22 In the vein of *Year of the Dog* and *The Higher Power of Lucky*, this Middle Eastern coming-of-age story is told with warmth, spirit, and a mischievous sense of humor Spunky eleven-year-old Wadjda lives in Riyadh, Saudi Arabia with her parents. She desperately wants a bicycle so that she can race her friend Abdullah, even though it is considered improper for girls to ride bikes. Wadjda earns money for her dream bike by selling homemade bracelets and mixtapes of banned music to her classmates. But after she's caught, she's forced to turn over a new leaf (sort of), or risk expulsion from school. Still, Wadjda keeps scheming, and with the bicycle so closely in her sights, she will stop at nothing to get what she wants. Set against the shifting social attitudes of the Middle East, *The Green Bicycle* explores gender roles, conformity, and the importance of family, all with wit and irresistible heart.

Stratonauts Manfred "Dutch" von Ehrenfried, 2013-12-13 Just what does it take to be a stratonaut, soaring to higher and higher altitudes of Earth's atmosphere? Brave men and women have reached extreme heights in balloons, aircraft and rocket ships over the past two centuries, from the first untethered balloon flight to the first flights in the newly defined stratosphere, through to the present flights that continue to set new records. This book defines the altitudes related to the stratosphere, how it changes with latitude and the effects on ascending aviators. Also described is how over time technology enabled aircraft and balloons to achieve higher altitudes. The book shows the clear influence of the military on designs that initially focused on speed and maneuverability, but only later on reaching new altitudes. The early flights into the troposphere and eventually the mid to upper reaches of the stratosphere are chronicled, with great emphasis on flight

operations. This includes decompression, bailouts, inertia coupling, ejections, catastrophic disintegration, crashes and deaths. Although the book highlights major altitude attempts and records, it also focuses on the life-threatening problems confronting the would-be stratonaut and the causes of many of their deaths. In doing so, it tries to define just what it takes to be a stratonaut.

Internet of Things Ovidiu Vermesan, Peter Friess, 2013 Today, we see the integration of Industrial, Business, and Consumer Internet. This integration is bringing together the Internet of People, Internet of Things, Internet of Energy, Internet of Vehicles, and Internet of Media, Services, and Enterprises. In this way, it forms the backbone of the digital economy and digital society and the foundation for the future knowledge and innovation-based economy in supporting solutions for the emerging challenges of public health, aging population, environmental protection and climate change, the conservation of energy and scarce materials, enhancements to safety and security, and the continuation and growth of economic prosperity. Penetration of smartphones and advances in machine to machine (M2M) and wireless communication technology will be the main drivers for Internet of Things (IoT) development. The IoT contribution is in the increased value of information created by the number of interconnections and the transformation of the processed information into knowledge shared in the Internet of Everything. The connected devices are part of ecosystems connecting people, processes, data, and things which are communicating in the cloud, using the increased storage and computing power and pushing for standardization of communication and metadata. In this context, the next generation of the cloud technologies will need to be flexible enough to scale autonomously, adaptive enough to handle constantly changing connections, and resilient enough to stand up to the huge flows in data that will occur. For 2025, analysts forecast that there will be six devices per human on the planet, which means 50 billion more connected devices over the next 12 years. The IoT market is connected to this growth from industrial M2M systems, smart meters, and wireless sensors. Enabling technologies such as nanoelectronics, MEMS, embedded systems, intelligent device management, smart phones, telematics, smart network infrastructure, cloud computing, and software technologies will create new products, new services, and new interfaces by creating smart environments and smart spaces with applications ranging from Smart Cities, smart transport, buildings, energy, and grid, to smart health and life. Internet of Things provides a broad overview of various topics of the IoT from the research and development priorities to enabling technologies, architecture, security, privacy, interoperability, and industrial applications. It is intended to be a standalone book in a series that covers the IoT activities of the Internet of Things European Research Cluster (IERC) from technology to international cooperation and the global state of play. The book builds on the ideas put forward by the IERC Strategic Research Agenda and presents global views and state-of-the-art results on the challenges that the research, development, and deployment of IoT faces at the global level. Technical topics discussed in the book include: - Introduction - Internet of Things in a wider context: Time for convergence. - Internet of Things Strategic Research Agenda -

Interconnection and Integration of the Physical World into the Digital World - Scalable Architectures for IoT Applications - IoT standardisation requirements and initiatives. Standardisation and Innovation. - Service Openness and Interoperability - Software define and virtualization of network resources - Mobile devices enable IoT evolution from industrial applications to mass consumer applications - Innovation through Interoperability and Standardisation when everything is connected anytime at anyplace

Surface-Enhanced Raman Scattering Katrin Kneipp, Martin Moskovits, Harald Kneipp, 2006-06-21 Almost 30 years after the first reports on surface-enhanced Raman signals, the phenomenon of surface-enhanced Raman scattering (SERS) is now well established. SERS gained particular interest after single-molecule Raman spectroscopy had been demonstrated. This book summarizes and discusses present theoretical approaches that explain the phenomenon of SERS and reports on new and exciting experiments and applications of the fascinating spectroscopic effect.

Get A Grip Gino Wickman, Mike Paton, 2014-04-08 It's time to take your business to the next level. Eileen Sharp and Vic Hightower were frustrated. After years of profitable, predictable growth, Swan Services was in a rut. Meetings were called and discussions held, but few decisions were made and even less got done. People were pointing fingers and assigning blame, but nothing happened to solve Swan's mounting problems. It felt as though they were working harder than ever but with less impact. The company Eileen and Vic had founded and built for 10 years was a different place. It just wasn't fun anymore. Their story is not unusual. The challenges they were facing are common, predictable, and solvable. Get A Grip tells the story of how Swan Services resolves its issues by implementing the Entrepreneurial Operating System®. With the help of EOS, Eileen, Vic, and their leadership team master a set of managerial tools that allow them to get traction on their business, grow the business, and deliver better results for clients. Fluorescence Spectroscopy and Microscopy Yves Engelborghs, Antonie J.W.G. Visser, 2016-08-23 Reflecting the expanding field's need for reliable protocols, Fluorescence Spectroscopy and Microscopy: Methods and Protocols offers techniques from a worldwide team of experts on this versatile and vital subject. The topics covered fall into four broad categories: steady-state fluorescence spectroscopy, time-resolved fluorescence spectroscopy, fluorescent probe development, and the various sub-categories of fluorescence microscopy, such as fluorescence recovery after photobleaching (FRAP), live

cell FRET imaging (FRETim), fluorescence lifetime imaging (FLIM), fluorescence fluctuation spectroscopy (FFS), and single-molecule fluorescence spectroscopy (smFS). Written as a part of the popular Methods in Molecular Biology series, chapters include the kind of unambiguous detail and key implementation advice that proves essential for successful results. Comprehensive and practical, Fluorescence Spectroscopy and Microscopy: Methods and Protocols aims to guide both 'novice' and established scientists toward furthering their research with these invaluable techniques.

Cost-Effective Building Christian Schittich, 2012-12-17 This latest volume in the In Detail series turns the spotlight on projects otherwise overshadowed by the spectacular and extravagant buildings that fill the specialist journals: unvarnished, unpretentious buildings that, despite tight budgets, are clearly worked out to the last detail. They exemplify how, and by what measures, cost-effective planning and building are possible. Because cost-effective building requires that special attention be paid to the overall planning and implementation these processes are examined comprehensively in specialist contributions and project documentations, from office organization through the design phase and the coordination of implementation planning, on to ultimate realization. The spectrum of solutions extends from the use of standardized products to innovative and individual solutions for details, complete with specified costs, and is a source of inspiration for architects and planners.
