Tratado de Nutrición Angel Gil (DRT) Hernandez, 2010-09-20 El Tratado de Nutrición, 2a edición, aporta conocimientos que abarcan desde la bioquímica y la biología molecular, la fisiología y la bromatología, hasta la nutrición en el estado de salud y la nutrición clínica. Dirigido por el Profesor Ángel Gil Hernández y con la participación de cerca de 300 autores, es la obra de nutrición más completa que se ha escrito hasta ahora. El objetivo fundamental del Tratado de Nutrición es servir de obra de consulta para los profesionales relacionados con la Nutrición y de estudio para los estudiantes de los nuevos grados en el ámbito de las ciencias de la salud (Nutrición y Dietética Humana, Medicina, Farmacia, Biología, Bioquímica y Biología Molecular, y Enfermería) y de los másteres asociados. A la calidad técnica y gráfica de cada uno de los tomos se suma la opción de acceder al sitio Web que incluye animaciones, vídeos, aplicaciones informáticas y numerosos documentos de interés. Todo ello constituye un atractivo de enorme valor para todos los profesionales de la salud interesados en la nutrición. En este tomo se considera la composición y el valor nutritivo de los principales sistemas alimentarios, así como de los aditivos, los nuevos ingredientes y los complementos alimentarios y los alimentos funcionales. Asimismo, se incluyen varios capítulos relacionados con la toxicología y la seguridad alimentaria y con el etiquetado y las alegaciones nutricionales.

Fish As Food V2 Georg Borgstrom, 2012-12-02 Fish as Food, Volume II: Nutrition, Sanitation, and Utilization summarizes the public health aspects of fish, including fish handling and processing. This volume also discusses the global aspects of fish utilization, illustrating the key role of fisheries in many countries and major regions. Comprised of three parts encompassing 19 chapters, the book initially discusses the protein, amino acid, vitamins, and mineral content of fish and fish oil. This volume also explains the effects of fish processing and handling on these nutritional components. The subsequent chapters present studies on the role of fish in human nutrition, focusing on the Japanese diet. The book also covers the utilization of converted fish-processing wastes to fish meal and condensed fish soluble in feeding poultry, livestock, and mink. The second part of the book focuses on food poisoning caused by fish and fishery products. This part deals with the bacterial activity in fish and related products due to water pollution and contamination. Other chapters examine Salmonella problems

in the sea and the allergies and other disorders related to fish poisoning. The effect of radioactivity on marine organisms and the uptake and bioaccumulation of radionuclides in marine organisms are also discussed. Lastly, this volume presents the trends and patterns in fish and shellfish utilization. This volume will be of considerable value primarily to fish and food scientists in general and also to public health workers, marine and fresh-water biologists, nutritionists, and sanitary engineers.

More than Beef, Pork and Chicken - The Production, Processing, and Quality Traits of Other Sources of Meat for Human Diet José Manuel Lorenzo, Paulo E. S. Munekata, Francisco J. Barba, Fidel Toldrá, 2019-01-31 This comprehensive work explores the demand, supply and variable consumer attitude toward a wide variety of unconventional and exotic animal species that are consumed in different parts of the world. Individual chapters focus on the consumption of horse meat, camel, buffalo, sheep, rabbit, wild boar, deer, goose, pheasant and exotic meats such as alligator, snake, frog and turtle. For each type of animal species, the carcass characteristics, physico-chemical properties and nutritional value of the meat are extensively outlined. The consumer preference, behavior and perception of each type of meat are also covered, with focus on important factors from sensory properties to psychological and marketing aspects. In promoting a better understanding of the complexities involved in consumer decision making, this book aims to improve the competitiveness of the meat industry through effective informational strategies that can increase consumer acceptance of more convenient, healthy and environmentally friendly meat choices. More than Beef, Pork and Chicken - The Production, Processing, and Quality Traits of Other Sources of Meat for Human Diet also focuses on the important role meat plays in the human diet and the evolution of the species. Beneficial factors such as protein, B complex vitamins, zinc, selenium and phosphorus are detailed. Negative factors are discussed as well, with issues such as fat and fatty acid content being addressed for each type of meat presented. In exploring the full range of nutritional benefits, consumer acceptance and carcass characteristics in a large quantity of different types of animal meats from all over the world, this book offers incredible value to researchers looking for a single source on unconventional meat processing.

PRINCIPIOS BÁSICOS DE BROMATOLOGÍA PARA ESTUDIANTES DE NUTRICIÓN Alma Rosa Del Angel Meza, 2013-07 El objetivo de este libro es presentar los métodos del análisis de alimentos más comunes y de mayor interés para el estudiante de nutrición, orientándolo principalmente al análisis químico a través del desarrollo de técnicas analíticas con las que pueden obtenerse resultados reproducibles y en las que se ha limitado la dependencia de costosos equipos de investigación, sin menoscabo de la calidad del análisis. Las técnicas empleadas infieren el desarrollo de procedimientos del tipo gravimétrico y volumétrico en general con los que se pretende que el estudiante se interese en continuar con la investigación de los métodos instrumentales.

South American camelids research Eduardo Frank,Marco Antonini,Oscar Toro,2023-08-28 South American camelids (Llamas, Alpacas, Vicuñas and Guanacos) are receiving increased interest not only in South America but also on a worldwide scale. They possess some unique features such as their fine fibre and healthy meat, and their high adaptivity to many climatic regions across the world. Apart from the important productive aspects, their physical attractiveness and friendly temperament also makes them popular as pet animals. There are still many gaps in the scientific literature with regard to South American camelids. In part, this gap can be diminished by this collection of papers which brings the experience of both European and South American researchers working together. The main themes considered in this book are the following: nutrition and feeding, meat production and the meat market, ecology, fibre production and the fibre market, animal breeding, animal health and pathology and socio-economical aspects. The particular advantages of South American camelids for the sustainable use of fragile ecosystems with native pastures are also outlined. 'South American camelids research' is aimed at scientists and animal breeders as well as students studying veterinary, animal and applied biological sciences. It can be of further reference to farmers and traders of fibre and meat products. Please note that most articles are written in Spanish.
