Imagined China Wang Haizhou,2022-05-23 This book explores how Chinese films constructed an image of China in the 1980s through analyzing the characters, composition of space, and conflict patterns of the films. It also examines the relationship between the representations in Chinese cinema and the realities of Chinese society. The study analyzes the imagery, metaphors, and cultural values of Chinese films in the 1980s to discover the common creative focus of Chinese film directors at the time. It also examines the specific creative elements and cultural significance of Chinese cinema in the 1980s. This book is neither a “period history” of Chinese cinema in the 80s, nor a thematic study of the “fifth generation”. Rather, it is an analysis of films as narrative texts that reflected on history. It uses the perspectives revealed by characters, narrative patterns, and conflicts in films of the 1980s to examine how the era was perceived at that time as well as how China’s national future and individuals’ personal futures were being conceptualized. This title will be a valuable resource for scholars and students of Chinese Studies, Contemporary China Studies, Film Studies, and those who are interested in Chinese culture and society in general.

Practical Methods for Analysis and Design of HV Installation Grounding Systems Ljubivoje M. Popovic, 2018-03-08 Practical Methods for Analysis and Design of HV Installation Grounding Systems gives readers a basic understanding of the modeling characteristics of the major components of a complex grounding system. One by one, the author develops and analyzes each component as a standalone element, but then puts them together, considering their mutual disposition, or so-called proximity effect. This is the first book to enable the making and analysis of the most complex grounding systems that are typical for HV substations located in urban areas that uses relatively simple mathematical operations instead of modern computers. Since the presented methods enable problem-solving for more complex issues than the ones solved using

National, IEC and/or IEEE standards, this book can be considered as an appendix to these standards. Develops general equations of lumped parameter ladder circuits Includes the analytical expression for determination of ground fault current distribution for a fault anywhere along a cable line Presents measurement and analytical methods for the determination of actual ground fault current distribution for high-voltage substations located in urban areas Provides the analytical procedure for the determination of the critical ground fault position for faults appearing in outgoing transmission lines Defines testing procedure for the correct evaluation of grounding systems of substations located in urban areas
