*Delivering Value with BIM* Adriana Sanchez,Keith Hampson,Simon Vaux,2016-03-31 Building Information Modelling (BIM) is a global phenomenon which is gaining significant momentum across the world. Currently there is little information on how to realise and monitor benefits from implementing BIM across the life-cycle of a built environment asset. This book provides a practical and strategic framework to realise value from implementing BIM by adapting Benefit Realisation Management theory. It presents an approach for practitioners aiming to implement BIM across the life-cycle of built environment assets, including both buildings and infrastructure. Additionally, the book features: wide-ranging information about BIM, the challenges of monitoring progress towards benefit goals and the greater context of implementation; a set of dictionaries that illustrate: how benefits can be achieved, what the benefit flows are and the enabling tools and processes that contribute to achieving and maximising them; a suite of measures that can serve to monitor progress with examples of how they have been used to measure benefits from BIM; real-world examples from across the world and life-cycle phases that show how these benefits can be achieved; and information on international maturity and competency measures to complement the value realisation framework. Including a blend of academic and industry input, this book has been developed in close collaborative consultation with industry, government and international research organisations and could be used for industry courses on BIM benefits and implementation for asset management or by universities that teach BIM-related courses.

*The Corporate Responsibility Code Book* Deborah Leipziger,2017-09-29 There is no single code or standard, no panacea that will lead to corporate responsibility (CR). Yet, now, more than ever before, corporations are waking up to the fact that

they must adopt codes and implement standards to satisfy the growing demands of an ever-wider and ever-less-trustful spectrum of stakeholders. So, where do companies start? Information overload is nowhere more apparent than in the field of CR. There are millions of pages and web pages written on codes and standards, but most of it is spin: organisations punting to sell their code or standard. The reality is that CR is an emerging field, a new terrain for which maps are much needed, but often imprecise. Each company is different, each with its own challenges, corporate culture, unique set of stakeholders, and management systems. Corporate responsibility is a journey for which, today, there is no single map but a multitude of codes and standards that can be combined in new ways for different journeys. In her many lectures around the world, CSR consultant Deborah Leipziger has been asked the same question over and over again: What are the best standards for companies seeking to be socially responsible? Over the course of more than a decade, she has analysed hundreds of codes of conduct and standards to answer that question. This indispensable resource is the result. The Corporate Responsibility Code Book is a guide for companies trying to understand the landscape of corporate responsibility and searching for their own, unique route towards satisfying diverse stakeholders. There is no one-size-fits-all approach. A company may face quite different challenges if it operates in more than part of the world. And yet stakeholders, especially consumers and investors, are keen for some degree of comparability with which they can evaluate corporate performance. There are countervailing forces at work within corporate responsibility: on the one hand is the need for convergence in order to simplify the large numbers of codes and standards; and, on the other hand, the need to foster diversity and innovation. Many of the best codes of conduct and standards are not well known while some CR instruments that are well disseminated are not terribly effective. Some comprehensive codes of conduct achieve nothing, while other quite vague codes of conduct become well embedded into the organisation and foster innovation and change. The book explains some of the best CR instruments available, and distils their most valuable elements. The goal of the book is to help companies select, develop and implement social and environmental codes of conduct. It demonstrates how the world's leading companies are implementing global codes of conduct, including the United Nations Global Compact, the OECD Guidelines for Multinational Enterprises, Social Accountability 8000 (SA 8000) and AccountAbility 1000 (AA 1000). The codes in this book cover a wide range of issues, including human rights, labour rights, environmental management, corruption and corporate governance. The book also includes how-to (or process) codes focusing on reporting, stakeholder engagement and assurance. This book is based on interviews with the standard-setters, the implementers of standards, academics, activists and other key stakeholders from around the world; and in many cases includes the full text of the code profiled. Each of the standards and codes described has been shared with the promulgators of the instrument to ensure that the information is as up to date as possible. The Corporate Responsibility Code Book will be an invaluable tool for companies developing their own code, but will also be a key tool for companies with a strong track record in CR, seeking to understand the interrelationships among codes and standards

to create their own corporate vision. It will be the key reference text on corporate codes of conduct for many years to come.

**BIM and Big Data for Construction Cost Management** Weisheng Lu, Chi Cheung Lai, Tung Tse, 2018-10-11 This book is designed to help practitioners and students in a wide range of construction project management professions to understand what building information modelling (BIM) and big data could mean for them and how they should prepare to work successfully on BIM-compliant projects and maintain their competencies in this essential and expanding area. In this book, the state-of-the-art information technologies that support high-profile BIM implementation are introduced, and case studies show how BIM has integrated core quantity surveying and cost management responsibilities and how big data can enable informed decision-making for cost control and cost planning. The authors' combined professional and academic experience demonstrates, with practical examples, the importance of using BIM and particularly the fusion of BIM and big data, to sharpen competitiveness in global and domestic markets. This book is a highly valuable guide for people in a wide range of construction project management and quantity surveying roles. In addition, implications for project management, facilities management, contract administration, and dispute resolution are also explored through the case studies, making this book essential reading for built environment and engineering professionals.

*FIDIC Contracts in Europe* Donald Charrett,2022-11-29 FIDIC contracts are the most widely used contracts for international construction around the world and are used in many different jurisdictions, both common law and civil law. For any construction project, the General Conditions of Contract published by FIDIC need to be supplemented by Particular Conditions that specify the specific requirements of that project. *FIDIC Contracts in Europe: A Practical Guide to Application* provides readers with detailed guidance and resources for the preparation of the Particular Conditions that will comply with the requirements of the applicable laws that apply to the site where the work is carried out, and for the governing law of the contract, for a number of the jurisdictions in which FIDIC contracts are used. This book closely follows the format of *The International Application of FIDIC Contracts*, with the addition of an outline of the construction industry and information on the impact of COVID-19 on both the execution and operation of construction contracts in each jurisdiction. This book is essential reading for construction professionals, lawyers and students of construction law.

FIDIC Wilfred Abraham,Maria Isabel De Almeida Alvarenga,2005-01-01 In this unique guide to the suite of contracts published by FIDIC (The International Federation of Consulting Engineers) - the contract forms most widely used for international construction undertakings - twenty-two outstanding authorities in construction law from a wide variety of countries, describe relevant likely pitfalls (and special opportunities) for foreign lawyers in each of their jurisdictions. This very useful book will be extremely welcome to in-house counsel who must evaluate the legal disposition of a proposed or pending construction contract subject to the laws of a foreign jurisdiction. It will continue to be of service as long as the project proceeds and beyond, particularly for the optimal resolution of disputes.
