Homo Ludens Johan Huizinga, 1971-06-01 An essential reference for all game designers, this 1938 classic is “a fascinating account of ‘man the player’ and the contribution of play to civilization” (Harper’s). In this classic evaluation of play that has become a “must-read” for those in game design, Dutch philosopher Johan Huizinga defines play as the central activity in flourishing societies. Like civilization, play requires structure and participants willing to create within limits. Starting with Plato, Huizinga traces the contribution of Homo Ludens, or “man the player” through Medieval Times, the Renaissance, and into our modern civilization. Huizinga defines play against a rich theoretical background, using cross-cultural examples from the humanities, business, and politics. Homo Ludens defines play for generations to come.

My Left Foot Christy Brown, 2014-07-31 Christy Brown was born a victim of cerebral palsy. But the hapless, lolling baby concealed the brilliantly imaginative and sensitive mind of a writer who would take his place among the giants of Irish literature. This is Christy Brown's own story. He recounts his childhood struggle to learn to read, write, paint and finally type, with the toe of his left foot. In this manner he wrote his bestseller *Down all the Days*.

The Catholic Church Hans Küng, 2011-12-29 A landmark short history of the Catholic Church by the world's greatest living Christian theologian and historian. Hans Kung describes the history of the Roman Catholic Church from its origins in St Paul's Rome, through the disputes of the medieval era to the modern world. He examines the historic tension in the

Church between pluralism and exclusivity; how the role of the Pope has changed; the motivations of the great reforming pontiffs; the evolving functions of the bishops and cardinals; the church's enthusiasm for missionary activity; the origins of the Marian cult; and how the shock waves of the Reformation and Counter-Reformation can still be felt today. The book concludes with a searching assessment of how the Catholic faith confronts the immense challenges - from science, from the empowerment of women, from those seeking reform of the Church's strictures against abortion and contraception - in the new millennium. 'The sweep is vast and the tale told with pace and passion' Financial Times

Fibonacci's Liber Abaci Laurence Sigler, 2012-12-06 First published in 1202, Fibonacci's Liber Abaci was one of the most important books on mathematics in the Middle Ages, introducing Arabic numerals and methods throughout Europe. This is the first translation into a modern European language, of interest not only to historians of science but also to all mathematicians and mathematics teachers interested in the origins of their methods.

The Birth of Bioethics Albert R. Jonsen, 2003-08-28 This book is the first broad history of the growing field of bioethics. Covering the period 1947-1987, it examines the origin and evolution of the debates over human experimentation, genetic engineering, organ transplantation, termination of life-sustaining treatment, and new reproductive technologies. It assesses the contributions of philosophy, theology, law and the social sciences to the expanding discourse of bioethics. Written by one of the field's founders, it is based on extensive archival research into resources that are difficult to obtain and on interviews

with many leading figures. A very readable account of the development of bioethics, the book stresses the history of ideas but does not neglect the social and cultural context and the people involved.

The Invisible Hand Adam Smith,2008-08-07 Adam Smith's landmark treatise on the free market paved the way for modern capitalism, arguing that competition is the engine of a productive society, and that self-interest will eventually come to enrich the whole community, as if by an 'invisible hand'. Throughout history, some books have changed the world. They have transformed the way we see ourselves - and each other. They have inspired debate, dissent, war and revolution. They have enlightened, outraged, provoked and comforted. They have enriched lives - and destroyed them. Now Penguin brings you the works of the great thinkers, pioneers, radicals and visionaries whose ideas shook civilization and helped make us who we are.

Fortune like the Moon Alys Clare,Elizabeth Harris,2003-07-07 Shortly before his unexpected coronation, King Richard passed a law letting all of England's prisoners go free. Shortly afterwards a young nun is found, gruesomely murdered. Richard swiftly employs an old military colleague of his, Josse d'Acquin, to unravel this hideous mystery. Who could have wanted to kill this innocent young novice, and, more worryingly, why? Josse goes to Hawkenlye Abbey to find out the answers to these questions. He is having little success until meets the Abbess Helewise, a woman who quickly proves herself to be his equal, both as an amateur sleuth, and as a figure the community can rely on during this turbulent time for England. This duo have to find the murderer, and find him quickly, or they'll have the King of England to answer to...

Just-in-Time Systems Roger Rios,Yasmín A. Ríos-Solís,2011-11-09 Whether different types of costs are to be reduced, benefits to be maximized or scarce resources to be managed, scheduling theory provides intelligent methods for practitioners and scientists. The just-in-time (JIT) production philosophy has enriched the classical scheduling theory with models that consider characteristics such as inventory costs, set-up times, lot sizing, or maintenance. This edited volume considers the specifics of just-in-time systems. It provides knowledge and insights on recent advances in scheduling theory where just-in-time aspects are considered. Contributions on models, theory, algorithms, and applications, that bring the theory up-to-date on the state-of-the-art of JIT systems are presented. Professionals, researchers and graduate students will find this book useful.

The Web of Life Fritjof Capra,1997-09-15 The vitality and accessibility of Fritjof Capra's ideas have made him perhaps the most eloquent spokesperson of the latest findings emerging at the frontiers of scientific, social, and philosophical thought. In his international bestsellers *The Tao of Physics* and *The Turning Point*, he juxtaposed physics and mysticism to define a new vision of reality. In *The Web of Life*, Capra takes yet another giant step, setting forth a new scientific language to describe interrelationships and interdependence of psychological, biological, physical, social, and cultural phenomena--the web of life. During the past twenty-five years, scientists have challenged conventional views of evolution and the organization of living systems and have developed new theories with revolutionary philosophical and social implications. Fritjof Capra has been at the forefront of this revolution. In *The Web of Life*, Capra offers a brilliant synthesis of such recent scientific breakthroughs as the theory of complexity, Gaia theory, chaos theory, and other explanations of the properties of organisms, social systems, and ecosystems. Capra's surprising findings stand in stark contrast to accepted paradigms of mechanism and Darwinism and provide an extraordinary new foundation for ecological policies that will allow us to build and sustain communities without diminishing the opportunities for future generations. Now available in paperback for the first time, *The Web of Life* is cutting-edge science writing in the tradition of James Gleick's *Chaos*, Gregory Bateson's *Mind and Matter*, and Ilya Prigogine's *Order Out of Chaos*.

The Sand-Reckoner Archimedes,2015-09-14 THE CLASSIC WORK OF ARCHIMEDES *The Sand-Reckoner* Dimensio Circuli of Archimedes Translated by Thomas L. Heath (Original publication: Cambridge University Press, 1897). *The Sand Reckoner* is a work by Archimedes in which he set out to determine an upper bound for the number of grains of sand that fit into the universe. In order to do this, he had to estimate the size of the universe according to the contemporary model, and invent a way to talk about extremely large numbers. The work, also known in Latin as *Archimedis Syracusani Arenarius* and *Dimensio Circuli*, which is about 8 pages long in translation, is addressed to the Syracusan king Gelo II (son of Hiero II), and is probably the most accessible work of Archimedes; in some sense, it is the first research-expository paper. Archimedes died during the Siege of Syracuse when he was killed by a Roman soldier despite orders that he should not be harmed. Cicero describes visiting the tomb of Archimedes, which was surmounted by a sphere and a cylinder, which Archimedes had requested to be placed on his tomb, representing his mathematical discoveries. Unlike his inventions, the mathematical writings of Archimedes were little known in antiquity. Mathematicians from Alexandria read and quoted him, but the first comprehensive compilation was not made until c. 530 AD by Isidore of Miletus in Byzantine Constantinople, while commentaries on the works of Archimedes written by Eutocius in the sixth century AD opened them to wider readership for the first time. The relatively few copies of Archimedes' written work that survived through the Middle Ages were an influential source of ideas for scientists during the Renaissance, while the discovery in 1906 of previously unknown works by Archimedes in the *Archimedes Palimpsest* has provided new insights into how he obtained mathematical results.
