*Manual of Neonatal Care* John P. Cloherty, Eric C. Eichenwald, Anne R. Hansen, Ann R. Stark, 2012-01-05 This edition of the Manual of Neonatal Care has been completely updated and extensively revised to reflect the changes in fetal, perinatal, and neonatal care that have occurred since the sixth edition. This portable text covers current and practical approaches to evaluation and management of conditions encountered in the fetus and the newborn, as practiced in high volume clinical services that include contemporary prenatal and postnatal care of infants with routine, as well as complex medical and surgical problems. Written by expert authors from the Harvard Program in Neonatology and other major neonatology programs across the United States, the manual's outline format gives readers rapid access to large amounts of valuable information quickly. The Children's Hospital Boston Neonatology Program at Harvard has grown to include 57 attending neonatologists and 18 fellows who care for more than 28,000 newborns delivered annually. The book also includes the popular appendices on topics such as common NICU medication guidelines, the effects of maternal drugs on the fetus, and the use of maternal medications during lactation. Plus, there are intubation/sedation guidelines and a guide to neonatal resuscitation on the inside covers that provide crucial information in a quick and easy format.

Gerontological Nursing Patricia A. Tabloski, 2014 GERONTOLOGICAL NURSING, 3/e is a comprehensive, research-based, and up-to-date guide to nursing care for older adults in all settings. It brings together essential information about normal and pathological changes associated with aging; healthy aging; common diseases of aging; and key psychosocial, cultural, and public health issues. Reflecting today's emphasis on evidence-based practice and appropriate delivery of scarce healthcare resources, this text presents new best practices and QSEN standards throughout, promoting more effective assessment, diagnosis, planning, and outcome evaluation. The text's multidisciplinary approaches help nurses add life to years, not just extend life. Its coverage of acute and chronic diseases includes nursing implications, atypical presentation, functional implications, pharmacology, evaluation, etiology, risk factors, and complications; the text also includes a full chapter on multisystem diseases. This book supports safe, effective, and appropriate practice in the home, hospitals, long-term care, and hospice settings.

**Neonatal Heart Disease** Robert M. Freedom, Leland N. Benson, Jeffrey F. Smallhorn, 2012-12-06 As pediatric cardiology becomes more and more neonatal cardiology and even fetal cardiology, Neonatal Heart Disease by Robert M. Freedom, MD, Leland N. Benson, MD, and Jeffrey F. Smallhorn, MD is extraordinarily timely. Neonatal Heart Disease consists of 50 chapters by 25 distinguished contributors and is a worthy successor to The Neonate With Congenital Heart Disease by Richard D. Rowe, MD and his colleagues (1968 and 1981). The first edition of this book in 1968 established Richard D. Rowe, MD as the father of neonatal cardiology. As most pediatric cardiologists now know, Dick Rowe died on January 18, 1988 after a brief illness. It will therefore come as no surprise that the present volume is dedicated to this great and gentle man. Nor will it come as a surprise that I have been asked to devote this Foreword to Richard D. Rowe, MD, pioneering neonatal cardiologist and incomparable personal friend. What can one say about Dick Rowe? Well, there are at least two very different tales. There is Dick Rowe the public man - the factual account of Dick Rowe's achievements as a physician, educator, and research man - the Dick Rowe that virtually everyone knows. And then there is Dick Rowe the private man - the extraordinary human being who only his personal friends were privileged to know. I shall try to tell something of both stories. First, the public man - the factual account - is really quite amazing.
