*Thumb Culture* Peter Glotz, Stefan Bertschi, Chris Locke, 2005 Mobile communication has an increasing impact on people's lives and society. Ubiquitous media influence the way users relate to their surroundings, and data services like text and pictures lead to a culture shaped by thumbs. Representing several years of research into the social and cultural effects of mobile phone use, this volume assembles fascinating approaches and new insights of leading scientists and practitioners. It contains the results of a first international survey on the social consequences of mobile phones and provides a comprehensive inventory of today's issues and an outlook in mobile media, society, and their future study. Peter Glotz is Emeritus Professor of Media and Society, University of St. Gallen, Switzerland. Stefan Bertschi is a researcher at the University of St. Gallen, Switzerland.

**The Marshmallow Test** Walter Mischel, 2014-09-25 'A brilliant book' Daniel Kahneman, author of *Thinking, Fast and Slow* 'A book that can show you how to change your behaviour' Evening Standard A child is presented with a marshmallow and given a choice: Eat this one now, or wait and enjoy two later. What will she choose? And what does her decision say about the person she'll become? Walter Mischel's now iconic 'marshmallow test,' one of the most famous experiments in the history of psychology, proved that the ability to delay gratification is critical to living a successful and fulfilling life: self-control not only predicts higher marks in school, better social and cognitive functioning, and a greater sense of self-worth; it also helps us manage stress, pursue goals more effectively, and cope with painful emotions. But is willpower prewired, or can it be taught? In his groundbreaking new book, Dr. Mischel draws on decades of compelling research and life examples to explore the nature of willpower, identifying the cognitive skills and mental mechanisms that enable it and showing how these can be applied to challenges in everyday life--from weight control to quitting smoking, overcoming heartbreak, making major decisions, and planning for retirement. With profound implications for the choices we make in parenting, education, public policy and self-care, *The Marshmallow Test* will change the way we think about who we are and what we can be. And since, as Mischel argues, a life with too much self-control can be as unfulfilling as one with too little, this book will also teach you when it's time to ring the bell and enjoy that marshmallow. What readers are saying: \*\*\*\*\* 'Accessible read that is both fascinating and has the potential to help change the way we approach self-control.' \*\*\*\*\* 'Fascinating, empowering, a brilliant aid to taking ownership of your life.' \*\*\*\*\* 'Encourages the reader that they have the power to change . . . thought-

provoking.'

**American Inventions** Stephen van Dulken,2004-03 A very fun and entertaining look at over 150 U.S. inventions. Lots of illustrations! Author has successful track record and gets reviewed.

**Merging with Siva** Subramuniya (Master.),2002 This book is a guide for one who is ready to diligently walk the spiritual path. Great new vistas open up throughout its 365 daily lessons as Gurudeva shares, in the clearest terms, deep metaphysical insights into the nature of God, soul and world, mind, emotions, ultimate realizations, chakras, purpose of life on earth and much, much more. Simple but effective practices are taught: how to remould our nature and karmas, calm the mind, develop self-esteem, begin to meditate, clear up the past and create a bright future. At the same time, the seeker is guided in establishing a regular devotional and yogic practice whereby the gains of his inner life and realizations are stabilized and used in practical ways.

Philosophical Issues in Psychiatry IV Kenneth S. Kendler,Josef Parnas,2017-04-06 The revisions of both DSM-IV and ICD-10 have again focused the interest of the field of psychiatry and clinical psychology on the issue of nosology. This interest has been further heightened by a series of controversies associated with the development of DSM-5 including the fate of proposed revisions of the personality disorders, bereavement, and the autism spectrum. Major debate arose within the DSM process about the criteria for changing criteria, leading to the creation of first the Scientific Review Committee and then a series of other oversight committees which weighed in on the final debates on the most controversial proposed additions to DSM-5, providing important influences on the final decisions. Contained within these debates were a range of conceptual and philosophical issues. Some of these - such as the definition of mental disorder or the problems of psychiatric "epidemics" - have been with the field for a long time. Others - the concept of epistemic iteration as a framework for the introduction of nosologic change - are quite new. This book reviews issues within psychiatric nosology from clinical, historical and particularly philosophical perspectives. The book brings together a range of distinguished authors - including major psychiatric researchers, clinicians, historians and especially nosologists - including several leaders of the DSM-5 effort and the DSM Steering Committee. It also includes contributions from psychologists with a special interest in psychiatric nosology and philosophers with a wide range of orientations. The book is organized into four major sections: The first explores the nature of psychiatric illness and the way in which it is defined, including clinical and psychometric perspectives. The second section examines problems in the reification of psychiatric diagnostic criteria, the problem of psychiatric epidemics, and the nature and definition of individual symptoms. The third section explores the concept of epistemic iteration as a possible governing conceptual framework for the revision efforts for official psychiatric nosologies such as DSM and ICD and the problems of validation of psychiatric diagnoses. The book ends by exploring how we might move from the descriptive to the etiologic in psychiatric diagnoses, the nature of progress in psychiatric research, and the possible benefits of moving to a

living document (or continuous improvement) model for psychiatric nosologic systems. The result is a book that captures the dynamic cross-disciplinary interactions that characterize the best work in the philosophy of psychiatry.

Children Helping Children Hugh C. Foot, Michelle J. Morgan, Rosalyn H. Shute, 1990-05-14 This fascinating compilation reviews the recent research on children's helping relationships outside the classroom setting. The focus is on the application of peer group help in familial, medical, therapeutic and health education contexts. Features ideas and insights from an impressive field of international contributors who offer a broad array of theoretical and practical perspectives on the issues surrounding children's helping relationships.

**Quantum Information Processing** Dimitris G. Angelakis, 2006 The knowledge that nature can be coherently controlled and manipulated at the quantum level was perceived as both a powerful stimulus and one of the greatest challenges facing experimental physics. Fortunately the exploration of quantum technology has many staging posts along the way, each of which will yield scientifically and technologically useful results and some of them are described in this volume.

**A Portable Cosmos** Alexander Jones, 2017 The Antikythera Mechanism, now 82 small fragments of corroded bronze, was an ancient Greek machine simulating the cosmos as the Greeks understood it. Reflecting the most recent researches, *A Portable Cosmos* presents it as a gateway to Greek astronomy and technology and their place in Greco-Roman society and thought.

*How Much Globalization Can We Bear?* Rüdiger Safranski, 2005 According to current debates, 'individualization' has frequently been proposed as the conceptual counterpart to 'globalization'. It has often seemed that nothing would be left once these processes have fully unfolded, other than individual human atoms dispersed on a globe without any political, economic or cultural structures. Regardless of whether this description is based on any good and valid observation, nobody drew the conclusion that suddenly emerges as evident after reading Rüdiger Safranski's lucid and timely exploration of the issue: globalization, if it occurs, means a radical change in the human condition. It brings human being in direct confrontation with the world in its totality. Almost unnoticed in broader debate, the scenario of globalization entails a return - in new a radical guise - of the time-honoured question of the ways of being-in-the-world of human beings. In this compelling new book, the philosopher Rüdiger Safranski grapples with the pressing problems of the global age: 'Big Brother' states, terrorism, international security and the seeming impossibility of 'world' peace. He suggests that the era of globalization should not be thought of as that epoch in world history in which all human beings will see themselves in the same, indistinct situation. There will always be, Safranski argues, some need for understanding one's own situation by drawing boundaries and conceptualizing 'otherness' and individuality.

**Computers** Eric G. Swedin, David L. Ferro, 2007-12-03 A great technological and scientific innovation of the last half of the 20th century, the computer has revolutionised how we organise information, how we communicate with each other, and the way we think about the human mind. This book offers a short history of this dynamic technology, covering its central themes since ancient times.

*Facilitated Communication Training* Rosemary Crossley, 1994-01-01

The Forgotten Revolution Lucio Russo, Silvio (translator) Levy, 2013-12-01 The period from the late fourth to the late second century B. C. witnessed, in Greek-speaking countries, an explosion of objective knowledge about the external world. While Greek culture had reached great heights in art, literature and philosophy already in the earlier classical era, it is in the so-called Hellenistic period that we see for the first time — anywhere in the world — the appearance of science as we understand it now: not an accumulation of facts or philosophically based speculations, but an organized effort to model nature and apply such models, or scientific theories in a sense we will make precise, to the solution of practical problems and to a growing understanding of nature. We owe this new approach to scientists such as Archimedes, Euclid, Eratosthenes and many others less familiar today but no less remarkable. Yet, not long after this golden period, much of this extraordinary development had been reversed. Rome borrowed what it was capable of from the Greeks and kept it for a little while yet, but created very little science of its own. Europe was soon smothered in the obscurantism and stasis that blocked most avenues of intellectual development for a thousand years — until, as is well known, the rediscovery of ancient culture in its fullness paved the way to the modern age.

**Magisches Quadrat und Melancholie in Thomas Manns Doktor Faustus** Rosemarie Puschmann, 1983

**Decoding the Heavens** Jo Marchant, 2009-08-18 In 1900 a group of sponge divers blown off course in the Mediterranean discovered an Ancient Greek shipwreck near the island of Antikythera dating from around 70 BC. Lying unnoticed for months amongst their hard-won haul was what appeared to be a formless lump of corroded rock, which turned out to be the most stunning scientific artefact we have from antiquity. For more than a century this 'Antikythera mechanism' - an ancient computer - puzzled academics, but now, more than 2000 years after the device was lost at sea, scientists have pieced together its intricate workings. In *Decoding the Heavens*, Jo Marchant tells for the first time the story of the 100-year quest to understand the Antikythera mechanism. Along the way she unearths a diverse cast of remarkable characters - ranging from Archimedes to Jacques Cousteau - and explores the deep roots of modern technology not only in Ancient Greece, the Islamic world and medieval Europe.

Decoding the Mechanisms of Antikythera Astronomical Device Jian-Liang Lin, Hong-Sen Yan, 2015-10-22 This book presents a systematic design methodology for decoding the interior structure of the Antikythera mechanism, an astronomical device from ancient Greece. The historical background, surviving evidence and reconstructions of the mechanism are

introduced, and the historical development of astronomical achievements and various astronomical instruments are investigated. Pursuing an approach based on the conceptual design of modern mechanisms and bearing in mind the standards of science and technology at the time, all feasible designs of the six lost/incomplete/unclear subsystems are synthesized as illustrated examples, and 48 feasible designs of the complete interior structure are presented. This approach provides not only a logical tool for applying modern mechanical engineering knowledge to the reconstruction of the Antikythera mechanism, but also an innovative research direction for identifying the original structures of the mechanism in the future. In short, the book offers valuable new insights for all readers who are interested in the Antikythera mechanism.

Policy and Practice in Multicultural and Anti-Racist Education Peter Foster, 2019-08-13 This fascinating case study, first published in 1990, of how policies work out in a real school setting is placed in the context of the wider debate about multicultural, anti-racist education. This book also makes suggestions for the shaping of future policy. This book should be of interest to lecturers and students of education and sociology.
