Survival In Auschwitz Primo Levi,1996 A work by the Italian-Jewish writer, Primo Levi. It describes his arrest as a member of the Italian anti-fascist resistance during the Second World War, and his incarceration in the Auschwitz concentration camp from February 1944 until the camp was liberated on 27 January 1945.

Primary Teachers Talking Professor Jennifer Nias, Jennifer Nias, 2002-06-01 What is it like to be a primary teacher? The first detailed study of the personal and professional experience of primary teachers in England and Wales, Primary Teachers Talking makes extensive use of verbatim evidence supplied by teachers during interviews in their first decade of work and again ten years later. In Part I Jennifer Nias discusses the importance attached to the ways in which primary teachers see themselves and the main dimensions of that self-image. In Part II, she examines the subjective experience of 'being a primary teacher', looking at the main factors which contribute to job satisfaction and dissatisfaction, and at teachers' relationships with their colleagues. She shows that to 'feel like a teacher' is to learn to live with dilemma, contradiction and paradox and - at its best - to experience in their resolution the creative satisfactions of the artist.

The World for a Shilling Michael Leapman, 2011-08-18 Conceived as a showcase for Britain's burgeoning manufacturing industries and the exotic products of its Empire, the Great Exhibition at the Crystal Palace was Britain's first truly national spectacle. Michael Leapman explores how the exhibition came into being; the key characters who made it happen (from Prince Albert, who was credited with the idea, to Thomas Cook, whose cheap railway trips ensured its accessibility to all); and the fascinating tales behind the exhibits that fired the imagination of the era. 'The best kind of popular history: exact, imaginative and full of fun.' Sunday Telegraph `Splendid... Michael Leapman brings a child's delight to the wonders of the Exhibition and his enthusiastic prose makes his readers feel they are almost walking down its aisles.' Mail on Sunday `Entertaining and engaging' Independent

Education for Mathematics in the Workplace A. Bessot, J. Ridgway, 2006-04-11 This timely volume raises issues concerning the nature of school mathematics and mathematics at work, and the challenges of teaching valuable mathematics in school and providing appropriate training for a variety of careers. It offers lively commentaries on important `hot' topics:

transferring knowledge and skill across contexts; 'authentic mathematics'; comparability of different types of assessment; and analyses of research methods.

The Christology of the New Testament ,1959-01-01 This book is invigorating to read, for it is how biblical theology should be written. Professor Cullmann has set a high standard of biblical scholarship in this book, and it will be a great resource for students of sacred Scripture.

Einstein's Enigma or Black Holes in My Bubble Bath C.V. Vishveshwara,2006-11-03 This is a fascinating and enjoyable popular science book on gravity and black holes. It offers an absorbing account on the history of research on the universe and gravity from Aristotle via Copernicus via Newton to Einstein. The author possesses high literary qualities and is celebrated relativist. The physics of black holes constitutes one of the most fascinating chapters in modern science. At the same time, there is a fanciful quality associated with this strange and beautiful entity. The black hole story is undoubtedly an adventure through physics, philosophy, history, fiction and fantasy. This book is an attempt to blend all these elements together.

Emergent Technologies and Design Michael Hensel,Achim Menges,Michael Weinstock,2013-09-13 Emergence - the process by which new and coherent structures, patterns and properties 'emerge' from within complex systems Traditional architecture starts from the premise that architectural structures are singular and fixed, and however well integrated are separate from their environment and context. Emergence requires that the opposite is true - that those structures are complex energy and material systems that have a lifespan, exist as part of an environment of other active systems, and develop in an evolutionary way. This book, based on the authors' internationally renowned Emergent Technologies and Design course at the Architectural Association in London, introduces a new approach to the practice of architecture. The authors use essays and projects to demonstrate the interrelationship of concepts such as emergence and self-organisation with the latest technologies in design, manufacturing and construction. With projects from their course, and critiques and commentary from some of the world's leading design theorists and practitioners, the authors of Emergent Technologies and Design have introduced a radical new way of understanding the way in which architecture is conceived, designed and produced.

Computability B. Jack Copeland,Carl J. Posy,Oron Shagrir,2015-01-30 Computer scientists, mathematicians, and philosophers discuss the conceptual foundations of the notion of computability as well as recent theoretical developments. In the 1930s a series of seminal works published by Alan Turing, Kurt Gödel, Alonzo Church, and others established the

theoretical basis for computability. This work, advancing precise characterizations of effective, algorithmic computability, was the culmination of intensive investigations into the foundations of mathematics. In the decades since, the theory of computability has moved to the center of discussions in philosophy, computer science, and cognitive science. In this volume, distinguished computer scientists, mathematicians, logicians, and philosophers consider the conceptual foundations of computability in light of our modern understanding. Some chapters focus on the pioneering work by Turing, Gödel, and Church, including the Church-Turing thesis and Gödel's response to Church's and Turing's proposals. Other chapters cover more recent technical developments, including computability over the reals, Gödel's influence on mathematical logic and on recursion theory and the impact of work by Turing and Emil Post on our theoretical understanding of online and interactive computing; and others relate computability and complexity to issues in the philosophy of mind, the philosophy of science, and the philosophy of mathematics. Contributors Scott Aaronson, Dorit Aharonov, B. Jack Copeland, Martin Davis, Solomon Feferman, Saul Kripke, Carl J. Posy, Hilary Putnam, Oron Shagrir, Stewart Shapiro, Wilfried Sieg, Robert I. Soare, Umesh V. Vazirani

In Search of a Glorious Death Carlo Mazzantini,1992 This autobiographical narrative provides an alternative perspective of World War I, recounting the experiences of a Roman schoolboy who volunteered to fight against the Allies after Italy surrendered in 1943. But he is not sent to the front. Instead, with professional soldiers from the Russian front and fanatical fascists, he fights in the civil war that raged in Mussolini's puppet state. He is captured in Milan after the German surrender and is spared execution by his captors, boys of his own age.

Little Mother Cristina Ali Farah,Giovanna Bellesia,2011 When civil war erupts in Somalia, cousins Domenica Axad and Barni are separated and forced to flee the country. Barni manages to eke out a living in Rome, where she works as an obstetrician. Domenica wanders Europe in a painful attempt to reunite her broken family and come to terms with her past. After ten years, the two women reunite. When Domenica gives birth to a son, Barni, also known as Little Mother, is at her side. Together with the new baby, Domenica and Barni find their Somali roots and start to heal the pain they have suffered in war and exile. This powerful yet tender novel underscores the strength of women, family, and community, and draws on the tenacious yearning for a homeland that has been denied.

Economy of the Unlost Anne Carson, 2009-04-11 The ancient Greek lyric poet Simonides of Keos was the first poet in the Western tradition to take money for poetic composition. From this starting point, Anne Carson launches an exploration, poetic in its own right, of the idea of poetic economy. She offers a reading of certain of Simonides' texts and aligns these with writings of the modern Romanian poet Paul Celan, a Jew and survivor of the Holocaust, whose economies of language are notorious. Asking such questions as, What is lost when words are wasted? and Who profits when words are saved? Carson reveals the two poets' striking commonalities. In Carson's view Simonides and Celan share a similar mentality or disposition toward the world, language and the work of the poet. *Economy of the Unlost* begins by showing how each of the two poets stands in a state of alienation between two worlds. In Simonides' case, the gift economy of fifth-century b.c. Greece was giving way to one based on money and commodities, while Celan's life spanned pre- and post-Holocaust worlds, and he himself, writing in German, became estranged from his native language. Carson goes on to consider various aspects of the two poets' techniques for coming to grips with the invisible through the visible world. A focus on the genre of the epitaph grants insights into the kinds of exchange the poets envision between the living and the dead. Assessing the impact on Simonidean composition of the material fact of inscription on stone, Carson suggests that a need for brevity influenced the exactitude and clarity of Simonides' style, and proposes a comparison with Celan's interest in the negative design of printmaking: both poets, though in different ways, employ a kind of negative image making, cutting away all that is superfluous. This book's juxtaposition of the two poets illuminates their differences--Simonides' fundamental faith in the power of the word, Celan's ultimate despair--as well as their similarities; it provides fertile ground for the virtuosic interplay of Carson's scholarship and her poetic sensibility.

The Mystical Qabalah Dion Fortune, 2022-02-01 An occult classic and a Dion Fortune bestseller of strongly growing interest. Fortune was one of the first to bring this "secret tradition" to a wider audience with her clear and comprehensive exploration of the Qabalah tradition. *The Mystical Qabalah* remains a classic in its clarity, linking the broad elements of Jewish traditional thought—probably going back to the Babylonian captivity and beyond—with both Eastern and Western philosophy and later Christian insights. The Qabalah could be described as a confidential Judaic explanation of the paradox of "the Many and the One"—the complexity and diversity within a monotheistic unity. Whereas the Old Testament outlines the social and psychological development of a tightly knit "chosen group" culture, the supplementary Qabalah provides a detailed plan of the infrastructure behind the creative evolutionary process. *The Mystical Qabalah* devotes a chapter to each of the ten schematic "God-names," the qualities or Sephiroth which focus on the principal archetypes behind evolving human activity: the Spiritual Source; the principles of Force and Form; Love and Justice; the Integrative principle or the Christ Force; Aesthetics and Logic; the dynamics of the Psyche; and, finally, the Manifestation of life on Earth in a physical body.

The Relativistic Deduction Émile Meyerson, 2012-12-06 When the author of *Identity and Reality* accepted Langevin's

suggestion that Meyerson identify the thought processes of Einstein's relativity theory, he turned from his assured perspective as historian of the sciences to the risky bias of contemporary philosophical critic. But Emile Meyerson, the epistemologist as historian, could not find a more rigorous test of his conclusions from historical learning than the interpretation of Einstein's work, unless perhaps he were to turn from the classical revolution of Einstein's relativity to the non-classical quantum theory. Meyerson captures our sympathy in all his writings: . . . the role of the epistemologist is . . . in following the development of science (250); the study of the evolution of reason leads us to see that man does not experience himself reasoning . . . which is carried on unconsciously, and as the summation of his empirical studies of the works and practices of scientists, reason . . . behaves in an altogether predictable way: . . . first by making the consequent equivalent to the antecedent, and then by actually denying all diversity in space (202). If logic - and to Meyerson the epistemologist is logician - is to understand reason, then logic proceeds a posteriori. And so we are faced with an empirically based Parmenides, and, as we shall see, with an ineliminable 'irrational' within science. Meyerson's story, written in 1924, is still exciting, 60 years later.

Theorem Pier Paolo Pasolini, 2023-11-07 Theorem is the most enigmatic of Pier Paolo Pasolini's four novels. The book started as a poem and took shape as a film, also called Theorem, before turning at last into a work of fiction. In short prose chapters interspersed with stark passages of poetry, Pasolini tells a story of transfiguration and trauma. To the suburban mansion of a prosperous Milanese businessman comes a mysterious and beautiful young man who invites himself to stay. From the beginning he exercises a strange fascination on the inhabitants of the house, and soon everyone, from the busy father to the frustrated mother, from the yearning daughter to the weak-willed son to the housemaid from the country, has fallen in love with him. Then, as mysteriously as he appeared, the infatuating young man departs. How will these people he has touched so deeply do without him? Is there a passage out of the spiritual desert of modern capitalism into a new awakening, both of the senses and of the soul? Only questions remain at the end of a book that is at once a bedroom comedy, a political novel, and a religious parable.
