New Drivers of Performance in a Changing World A. Carretta,F. Fiordelisi,G. Mattarocci,2008-11-12 In a financial revolution, new determinants of performance arise and interest in the way performance is measured and communicated to stakeholders grows. This book presents a wide and accurate analysis of the impact that regulation, structural changes and new financial products have on the performance of markets and intermediaries.

*Sports Cardiology* Massimo Fioranelli,Gaetano Frajese,2012-12-20 This specialized reference textbook presents the physiological and pathophysiological aspects of cardiovascular diseases affecting the athlete population. The first part is a systematic explanation of the non-invasive and invasive diagnostic techniques used in cardiology. The second part examines the clinical approach to a great majority of the cardiological problems that involve the athlete population. All of the fields discussed in this textbook are treated from physiological and pathophysiological viewpoints, including the clinical and legal implications of athletes affected by diagnosed or unsuspected cardiovascular diseases. As such, this book is a particularly useful contribution to the literature for health care professionals, especially cardiologists (also fellows) and sports medicine physicians, providing them with the knowledge to make critical decisions regarding eligibility, thus preventing tragic events, and especially sudden death the most crucial event in sport.

**Assessing the Value and Cost of Organ Donation and Transplantation (ODT)** Evaldo Favi,Roberto Cacciola,Hani Alahdal,Carlo Alfieri,Giuseppe Castellano,Emmanouil Giorgakis ,Lara Gitto,2024-06-28 The complexity in analyzing the Health Economics of Organ Donation and Transplantation (ODT) reflects the variety of specialties involved in the maintenance and development of the service. Commonly, ODT relies on different funding sources. Financing the three main phases of the service (Organ Donation, Retrieval and Transplantation), these are often compartmentalized and independent. Furthermore, the value of the service is rarely analyzed against the social and treatment costs for the management of patients with End Stage Organ Failure (ESOF). Defining a Value-Based ODT service represents a major challenge, while hundreds of thousands of patients with ESOF globally, hope to receive an organ transplant as life-saving or life-prolonging treatment. The “value” itself may not be limited to cost-benefit analysis but it should include social aspects of care, influencing the overall quality and performances of ODT to benefit patients, their families and more broadly our society.

Molecular Genetics and Pathogenesis of Ehlers-Danlos Syndrome and Related Connective Tissue Disorders Marina Colombi ,Marco Ritelli,2020-12-14 Ehlers-Danlos syndromes (EDS) are a group of heritable connective tissue disorders (HCTDs) characterized by a variable degree of skin hyperextensibility, joint hypermobility and tissue fragility. The current EDS classification distinguishes 13 subtypes and 19 different causal genes mainly involved in collagen and extracellular matrix synthesis and maintenance. EDS need to be differentiated from other HCTDs with a variable clinical overlap, including Marfan syndrome and related disorders, some types of skeletal dysplasia and cutis laxa. The clinical recognition of EDS is not always straightforward, and, for a definite diagnosis, molecular testing can be of great assistance, especially in patients with an uncertain phenotype. Currently, the major challenging task in EDS is to unravel the molecular basis of the hypermobile EDS that is the most frequent form, and for which the diagnosis is only clinical in the absence of any definite laboratory test. This EDS subtype, as well as other EDS-reminiscent phenotypes, are currently investigated worldwide to unravel the primary genetic defect and related pathomechanisms. The research articles, case report, and reviews published in the Special Issue entitled “Molecular Genetics and Pathogenesis of Ehlers-Danlos Syndrome and Related Connective Tissue Disorders” focus on different clinical, genetic and molecular aspects of several EDS subtypes and some related disorders, offering novel findings and future research and nosological perspectives.

**Retroperitoneoscopy and Extraperitoneal Laparoscopy in Pediatric and Adult Urology** Paolo Caione,Louis R. Kavoussi,Francesco Micali,2013-04-17 Laparoscopy is a new frontier of the surgical technique, which recently gained more and more popularity and credit upon the surgical teams, also in Urology. The reason stays in the reduced invasivity and in the advances on the techniques of video-assisted surgery. More recently the retroperitoneal access to laparoscopy surgery (retroperitoneoscopy or retroperitoneal laparoscopy) opened a new surgical approach to several diagnostic and operative procedures for a large number of urogenital tract diseases. The applications in pediatric and in adult age and the technical challenges are widely debated at the moment. The volume gathers contributions by internationally renowned authors and is a complete overview of the technique. The book addresses urologists, general and abdominal surgeons, pediatric urologists

and pediatric surgeons who are interested in minimally invasive procedures and particularly in retroperitoneal laparoscopy.

**Diversity as Strategic Opportunity** Anna Simonati, 2024-03-01 The principle of equality has always been considered as one of the fundamental values of modern societies; it compels administration to provide equal treatment to all subjects it enters in touch with, which is normally expressed as a general prohibition of discrimination. However, in recent times, the idea, according to which equality is not based only on protection against discrimination but also on promotion of diversity as a source of richness for society, is widely shared. This book gives a multidisciplinary overview of some of the possible methods and tools which are nowadays experimented by administration, in order to properly face the practical problems connected to diversity. ENDORSEMENTS: In this volume, Professor Anna Simonati has gathered a wide range of contributions which reflect on the nature of diversity, and its value in society today. Power structures are sticky. This volume reminds us that concepts as old as equality and equity, do not always manifest in ways that create diversity in these structures. The case studies within demonstrate that diversity will lead to empowerment - in other words, shifting the inherent power structures and opening opportunities for all. It is important for democracies to rebalance power structures, and deliberate administrative policies and practices aimed at diversity - as exemplified here - can make real differences for people. Critically, the volume also addresses diversity in education. Preparing the next generation for a world where diversity is a given, rather than a struggle is a worthy goal. This volume provides pathways for policy makers and those who deliver policy with a view to achieving this goal. — Adam Masters, The Australian National University The book makes a substantive contribution to our understanding and appreciation of how diversity can and ought to be seen not only as something to be protected by means of non-discrimination rules and mechanisms, but also and indeed primarily as a major source of development and improvement for public administration and the public services. Diversity is indeed a strategic opportunity, and this collective work developed under the leadership of Professor Anna Simonati shows us why and how to make the most of such strategic opportunities for public organizations worldwide. — Edoardo Ongaro, The Open University This Book is really precious because in its comparative approach, takes into account the legal provisions of many national Jurisdictions and the experience of many public Administrations all over the World. The Values of Diversity and Inclusion thus are considered non-only as general principles of Law, but in their action vis a vis the duty of Administrations to provide equal treatment to all subjects they enter in touch with. The aim of the Volume, as Anna Simonati explains, is not aimed at offering final and definite answers, nor a systemic study of the subject, but to address the various possible causes of discrimination and most importantly the possible remedies against it with a Case oriented Analysis. This collective work therefore it is extremely valuable to underline how the Public Policies and the Administrative Law tools can be fundamental -in many different ways- for the never ending struggle towards Equality and Justice. — Aristide Police, LUISS University

Surgery for Non-Neoplastic Disorders of the Chest: a Clinical Update G.M. Verleden,D. Van Raemdonck,T. Lerut,M. Demedts,2004-09-01 Diseases of the chest are numerous and a multidisciplinary approach by the chest physician and thoracic surgeon is often required, not only in the management of chest malignancies, but also in the treatment of non-neoplastic disorders of the chest. Furthermore, many advances and improvements are put forward in the overall management of patients with advanced lung disease; besides lung transplantation, volume reduction surgery is reported as an alternative surgical option for emphysema patients which may delay, or even preclude the need for transplant.

Management of suppurative lung and pleural.

**Textbook of Echocardiography for Intensivists and Emergency Physicians** Armando Sarti,F. Luca Lorini,2019-06-07 The second edition of this superbly illustrated book equips practitioners with all the information that they will require in order to perform echocardiography appropriately and to interpret findings correctly. After clear exposition of fundamentals of the examination technique via both the transthoracic and the transesophageal approach, the functional anatomy of all normal and pathologic thoracic structures as observed on echocardiography is presented in detail. A wide range of basic and advanced applications of echocardiography in the emergency, perioperative, and intensive care settings are then described. A final supplementary section considers further applications of ultrasound in the ICU, such as in patients with respiratory failure, trauma, or venous thrombosis. This edition has been extensively revised and updated and includes entirely new chapters on various techniques and applications. It will be a tremendous aid to current best practice for all intensivists, emergency physicians, and anesthesiologists who intend to use echocardiography and ultrasound for diagnosis and guidance of optimal management in the critically ill.
