Recent Advances in Computational Terminology Didier Bourigault, Christian Jacquemin, Marie-Claude L'Homme, 2001-06-15 This first collection of selected articles from researchers in automatic analysis, storage, and use of terminology, and specialists in applied linguistics, computational linguistics, information retrieval, and artificial intelligence offers new insights on computational terminology. The recent needs for intelligent information access, automatic query translation, cross-lingual information retrieval, knowledge management, and document handling have led practitioners and engineers to focus on automated term handling. This book offers new perspectives on their expectations. It will be of interest to terminologists, translators, language or knowledge engineers, librarians and all others dependent on the automation of terminology processing in professional practices. The articles cover themes such as automatic thesaurus construction, automatic term acquisition, automatic term translation, automatic indexing and abstracting, and computer-aided knowledge acquisition. The high academic standing of the contributors together with their experience in terminology management results in a set of contributions that tackle original and unique scientific issues in correlation with genuine applications of terminology processing.

Genocide and International Relations Martin Shaw, 2013-09-19 Genocide and International Relations lays the foundations for a new perspective on genocide in the modern world. Genocide studies have been influenced, negatively as well as positively, by the political and cultural context in which the field has developed. In particular, a narrow vision of comparative studies has been influential in which genocide is viewed mainly as a 'domestic' phenomenon of states. This book emphasizes the international context of genocide, seeking to specify more precisely the relationships between genocide and the international system. Shaw aims to re-interpret the classical European context of genocide in this frame, to provide a comprehensive international perspective on Cold War and post-Cold War genocide, and to re-evaluate the key transitions of

the end of the Second World War and the end of the Cold War.

The Birth of Biopolitics M. Foucault, Arnold I. Davidson, Graham Burchell, 2008-04-17 Foucault continues on the theme of his 1978 course by focusing on the study of liberal and neo-liberal forms of government and concentrating in particular on two forms of neo-liberalism: German post-war liberalism and the liberalism of the Chicago School.

Decent Flexibility Dr Fred C. A. van Haasteren, 2017-07-30 Within the context of social law, temporary agency work has always been subject of debate. The pursuit of more flexible forms of labour is at odds with maintaining decent labour relations. For that reason, ever since it was established, the UN organisation for labour issues, ILO, has focused on private work placement. In its early years it tended to prohibit or severely restrict private work placement, but gradually it came to acknowledge that, for instance, temporary agency work had positive aspects, and that a total ban was pointless. In 1997, this culminated in ILO convention 181, which was widely supported. This did not end the debate on non-standards forms of paid work. Which forms of work can be considered decent? How do they relate to human rights? What are the effects of globalisation? In the European context, too, (cross-border) temporary agency work has attracted extensive attention. Lastly, the Netherlands has its own, unique form of public-private regulation. The guiding principle in this book is whether Convention 181 still has value in this day and age. What are the developments in temporary agency work in the social domain? How do they relate to the wide range of flexible work forms that are increasingly catching up with temporary agency work? Decent flexibility is the challenge. Dr Fred van Haasteren (1949) started his career as a scientific associate at the Society and Enterprise Foundation (SMO). From 1978 onward, he worked in the Dutch temporary agency sector. In 1982 he became a board member of Randstad Nederland; in 1991 he became Vice-President of Randstad Holding. Among other things, he was also President of the platform of European temporary agency employers and of the global temporary agency employer umbrella organisation CIETT. He is still a board member of the Dutch Labour Standards Foundation (SNA) and an independent member of the NCP OECD. The social policy pursued by temporary employment agencies has always been at the centre of his activities.

Elements of Structural Syntax Lucien Tesnière, 2015-02-11 This volume appears now finally in English, sixty years after the death of its author, Lucien Tesnière. It has been translated from the French original into German, Spanish, Italian, and Russian, and now at long last into English as well. The volume contains a comprehensive approach to the syntax of natural languages, an approach that is foundational for an entire stream in the modern study of syntax and grammar. This stream is known today as dependency grammar (DG). Drawing examples from dozens of languages, many of which he was proficient in, Tesnière presents insightful analyses of numerous phenomena of syntax. Among the highlights are the concepts of valency and head-initial vs. head-final languages. These concepts are now taken for granted by most modern theories of

syntax, even by phrase structure grammars, which represent, in a sense, the opposite sort of approach to syntax from what Tesnière was advocating. Now Open Access as part of the Knowledge Unlatched 2017 Backlist Collection.

The Theatre of Nicolas Drouin, Dit Dorimon, a Contemporary of Moliere Alice Thor Pianfetti,1977 The purpose here is to determine exactly what role Dorimon played in the development of the theatre of his time. Though he was a contemporary of Molière, his work antedate the corpus of Molière's theatre.

Refiguring the Archive Carolyn Hamilton,Verne Harris,Michèle Pickover,Graeme Reid,Razia Saleh,Jane Taylor,2012-12-06 Refiguring the Archive at once expresses cutting-edge debates on `the archive' in South Africa and internationally, and pushes the boundaries of those debates. It brings together prominent thinkers from a range of disciplines, mainly South Africans but a number from other countries. Traditionally archives have been seen as preserving memory and as holding the past. The contributors to this book question this orthodoxy, unfolding the ways in which archives construct, sanctify, and bury pasts. In his contribution, Jacques Derrida (an instantly recognisable name in intellectual discourse worldwide) shows how remembering can never be separated from forgetting, and argues that the archive is about the future rather than the past. Collectively the contributors demonstrate the degree to which thinking about archives is embracing new realities and new possibilities. The book expresses a confidence in claiming for archival discourse previously unentered terrains. It serves as an early manual for a time that has already begun.

Comparative Climate Change Litigation: Beyond the Usual Suspects Francesco Sindico,Makane Moïse Mbengue,2021-01-21 This book is based on the acknowledgment that climate change is a multifaceted challenge that requires action on the part of all stakeholders, including civil society, and the notion that climate change is at a tipping point

with urgent measures needed in the next decade. Against this background, civil society is turning its attention to the courts as a means to directly influence climate action, partly because of the global scepticism towards the progress of global climate action, despite the ongoing implementation of the Paris Agreement. Focusing on the individual, broadly representing civil society, the book offers fresh perspectives on climate change litigation. While most of the literature on climate change litigation examines the same specific jurisdictions, mostly common law countries (US and Australia in particular), this book also considers specific countries in Asia, Africa and Latin America with little or no climate change litigation. It explores the reasons for the lack of litigation and discusses what measures should or could be taken to change this situation and push forward climate action. Unlike other literature on the subject, this book analyses climate change litigation using a scenario-based methodology. Combining rigorous academic analysis with a practical policy-oriented focus, the book provides valuable insights for a wide range of stakeholders interested in climate change litigation. It appeals to civil society organisations around the world, international organisations and law firms interested in climate change litigation.

The Situationist City Simon Sadler, 1999-08-18 Simon Sadler searches for the Situationist City among the detritus of tracts, manifestos, and works of art that the Situationist International left behind. From 1957 to 1972 the artistic and political movement known as the Situationist International (SI) worked aggressively to subvert the conservative ideology of the Western world. The movement's broadside attack on establishment institutions and values left its mark upon the libertarian left, the counterculture, the revolutionary events of 1968, and more recent phenomena from punk to postmodernism. But over time it tended to obscure Situationism's own founding principles. In this book, Simon Sadler investigates the artistic, architectural, and cultural theories that were once the foundations of Situationist thought, particularly as they applied to the form of the modern city. According to the Situationists, the benign professionalism of architecture and design had led to a sterilization of the world that threatened to wipe out any sense of spontaneity or playfulness. The Situationists hankered after the pioneer spirit of the modernist period, when new ideas, such as those of Marx, Freud, and Nietzsche, still felt fresh and vital. By the late fifties, movements such as British and American Pop Art and French Nouveau Ralisme had become intensely interested in everyday life, space, and mass culture. The SI aimed to convert this interest into a revolution—at the level of the city itself. Their principle for the reorganization of cities was simple and seductive: let the citizens themselves decide what spaces and architecture they want to live in and how they wish to live in them. This would instantly undermine the powers of state, bureaucracy, capital, and imperialism, thereby revolutionizing people's everyday lives. Simon Sadler searches for the Situationist City among the detritus of tracts, manifestos, and works of art that the SI left behind. The book is divided into three parts. The first, *The Naked City*, outlines the Situationist critique of the urban environment as it then existed. The second, *Formulary for a New Urbanism*, examines Situationist principles for the city and for city living. The third, *A New Babylon*, describes actual designs proposed for a Situationist City.

Ecology Revisited Astrid Schwarz, Kurt Jax, 2011-03-18 As concerns about humankind's relationship with the environment move inexorably up the agenda, this volume tells the story of the history of the concept of ecology itself and adds much to the historical and philosophical debate over this multifaceted discipline. The text provides readers with an overview of the theoretical, institutional and historical formation of ecological knowledge. The varied local conditions of early ecology are considered in detail, while epistemological problems that lie on the borders of ecology, such as disunity and complexity, are discussed. The book traces the various phases of the history of the concept of ecology itself, from its 19th century origins and antecedents, through the emergence of the environmental movement in the later 20th century, to the future, and how ecology might be located in the environmental science framework of the 21st century. The study of 'ecological' phenomena has never been confined solely to the work of researchers who consider themselves ecologists. It is rather a field of knowledge in which a plurality of practices, concepts and theories are developed. Thus, there exist numerous disciplinary subdivisions and research programmes within the field, the boundaries of which remain blurred. As a consequence, the deliberation to adequately identify the ecological field of knowledge, its epistemic and institutional setting, is still going on. This will be of central importance not only in locating ecology in the frame of 21st century environmental sciences but also for a better understanding of how nature and culture are intertwined in debates about pressing problems, such as climate change, the protection of species diversity, or the management of renewable resources.
