At Least Know This Guy P. Harrison,2018-07-17 This primer on essential scientific literacy gives readers the basics to understand themselves and the world around them, plus a glimpse of how much more science has to offer. Science tells us a good deal about who we are, where we come from, the nature of the universe, how our brains work, and much, much more. Unfortunately, most people are largely unaware of this treasure trove of information. As a result, we are more prone to do things like aim nuclear weapons at each other, inflate the meaning of cultural differences, lay waste to the land, poison and deplete the oceans, fill the sky with carbon, and generally make poor judgments that cause needless trouble. This book seeks to remedy this situation by providing scientific answers to the most basic yet important questions about existence. Following the standard six-question list used by journalists researching a news story, critical-thinking advocate Guy P. Harrison turns to science to answer the who, what, why, when, where and how of life on Earth. How old is our planet? Where did it come from and where is it located in the universe? What is everything made of? When did life begin? Who are we as a species and what connections do we share with other life forms? Why is human culture continuously plagued by war, disease, and crime? Harrison not only offers science's best current answers to these crucial questions but shows how all of this information fits together. Going well beyond the simplistic factoids readily available on any smartphone, he reveals the wider implications and deeper meanings inherent in the scientific worldview. Both entertaining and informative, this exciting tour of the cosmos and human nature will leave readers with an accurate, up-to-date view of realities small and large, near and far.

Revelation of Jesus Christ: Decoded Connie J. Allen,2019-10-03 The Revelation of Jesus Christ, the Last Judgment, which prophesizes the end of days, is now decoded. I am Connie Allen, the second witness (Revelation 11). Jesus Christ is the first witness. I am the woman who fought the dragon, (Revelation 12). The subject of the Revelation has inspired fear and angst during the past centuries. Ministers presenting their interpretations have confused those who want to understand? I was born to discover the answer. For the past 50 years, I have been writing and rewriting. Now the work is completed and ready for publication. This is a work of nonfiction. It is the identification of events already in progress. This work is not about religion. Whether you believe in God or attend church, this is the manuscript that answers all of the key questions on life. Who are we? Why are we here? Why are we riddled with diseases, cancers? Why are our loved ones dying? For more than 2000 years, curious people have been looking for understanding. Who rules over the mind, suggesting how we should

respond, what we should do? Are we destined to suffer, to die, because of the diseases passed down to us through DNA? Photons carrying electromagnetism, the waste managers that exist as cleaners the bladder and bowels, are in charge of our thoughts and actions. The apostle John was shown the truth but he was told to seal it up in a book, the Revelation. Left by Jesus Christ, the Revelation is the ultimate manual concerning life and death. It describes our basic behaviour and our predestined responses, our probabilities. And just as John was chosen to record the frightening depiction of the end of this age, using imagery such as beasts with multiple heads and Armageddon, I was chosen to decipher the Revelation. The work is decoded based on physics, the behaviour of the four universal forces, human anatomy and DNA. It is made plain by scientific laws including the second law of thermodynamics. From the gamete stage, before we become embryos, we are explainable. Everything is undeniable according to the scientific record. Future works include the 50-year diary, "The woman who fought the dragon"; and Daniel 11: the "King of the south, king of the north chronicles: from gamete to death: the fight between mankind and electromagnetism," decoded by science.

Objects and Persons Trenton Merricks,2001-05-24 There are no statues. Or rocks. Or chairs. Or stars. But there are microscopic objects arranged statuwisewise and rockwise and chairwise and starwise. Moreover, there are--in addition to microscopic objects arranged humanwise--composite human beings. Or so Trenton Merricks argues. The ontology of Objects and Persons is motivated, in large part, by causal considerations. One of the central ideas is that physical objects are causally non-redundant: physical objects cause things that are not wholly overdetermined by their proper parts. Merricks 'eliminates' statues and other inanimate composite macrophysical objects on the grounds that they would--if they existed--be at best completely causally redundant. Merricks defends our existence by arguing, from certain facts about mental causation, that we human beings cause things that are not overdetermined by our proper parts. A second strand of argument for Merricks's

overall ontology involves a variety of philosophical puzzles, puzzles that are dealt with in illuminating and often novel ways. Many other issues are addressed along the way, including free will, the 'reduction' of a composite object to its parts, and the ways in which identity over time can for practical purposes be a matter of convention. Anyone working in metaphysics will enjoy this lucid and provocative book.

The Hidden Roots of Critical Psychology Michael Billig, 2008-02-12 `Billig's is a fascinating work of brilliant scholarship. It is written in an elegant style, spiced with humour, and gives one the feeling that it was a labour of love. It can be recommended without reservation' - Journal of Community and Applied Social Psychology `This is a quite extraordinary and original book. Billig has managed seamlessly to interweave History of Philosophy, History of Psychology, Critical Psychology and a deep grasp of the social nature of language and, moreover, do so in a very readable fashion' - Graham Richards, Formerly Professor of History of Psychology, Staffordshire University and Director of the British Psychological Society History of Psychology Centre, London `I can't quite capture how much I enjoyed this book. In beautiful, witty prose and through exemplary scholarship, Billig has produced an historical work that engages with profoundly important ideas not just for contemporary critical psychology but for psychology in general. Books as good as this are rare' - Alan Collins, Senior Lecturer in Psychology, Lancaster University Today new forms of critical psychology are challenging the cognitive revolution that has dominated psychology for the past three decades. This book explores the historical roots of these new psychologies. It demonstrates that their ideas are not quite as new as is often supposed. In the early modern period, thinkers like the Earl of Shaftesbury and Thomas Reid reacted against Locke's cognitive psychology in ways that were surprisingly modern, if not post-modern. However, until now, they have been virtually written out of psychology's history. It is now time to recognize the great originality of their psychological thinking. Writing in a non-technical style, Michael Billig seeks to overturn the dominant views of psychology's history. In so doing, he gives a fascinating account of the times, bringing psychology's hidden past vividly back to life.
