*Autonomous Driving* Markus Maurer, J. Christian Gerdes, Barbara Lenz, Hermann Winner, 2016-05-21 This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving."

*Handbuch Fahrerassistenzsysteme* Hermann Winner, Stephan Hakuli, Gabriele Wolf, 2009-08-31 In diesem Grundlagenwerk werden die Fahrerassistenzsysteme für aktive Sicherheit und Fahrerentlastung in Aufbau und Funktion ausführlich erklärt. **Factory Planning Manual** Michael Schenk, Siegfried Wirth, Egon Müller, 2009-10-29 The central purpose of this book is to impart knowledge, skills and practical - plementation methods for the planning and operation of adaptable production - cilities and factories. It addresses planning methods and procedures for various types of production facility up to and including entire factories, and is aimed at practicing factory planners and students alike. The book provides facts and demonstrates practical processes using case studies for the purposes of illustration, so that ultimately skills can be acquired that make independent practical implementation and app- cation possible. It is based on up-to-the-minute practical experience and univ- sally applicable knowledge of the planning and technological design of adaptable production facilities (manufacturing and assembly) and factories. In comparison to existing, thematically-similar reference books, what is in- vative about this manual is that it provides the impulse for a more flexible pl- ning approach for the efficient design of adaptable production facilities using - sponsive, unconventional planning and organizational solutions. The book aims to provide a way of integrating systematic and situation-driven planning methods in a meaningful way. Situation-driven planning is becoming increasingly important to production facilities in these fast-moving times of change, in particular in terms of resource and energy efficiency. Existing technical and organizational course of action in terms of resources (both human and technical) need to be selected for the specific case at hand, and changes (to workshops, products, processes and equ- ment) need to be managed.

Improved Scheduling Algorithm Using Dynamic Tree Construction for Wireless Sensor Networks Nithya Venkatachalam, Vaiyshnavi Perumal, 2016-04-20 The Wireless Sensor Network (WSN) composed of several nodes is used for different types of monitoring applications. The objective of deploying WSN is to observe a particular site for monitoring physical parameters like temperature, light, pressure, humidity or the occurrence of a phenomenon. The Sleep/Wake up scheduling for Wireless Sensor Networks has become an essential part of its working. In this book, the details of Low Energy Adaptive Clustering Hierarchy (LEACH) which introduces the concept of clustering in sensor networks, Energy-Efficient Clustering routing algorithm based on Distance and Residual Energy for Wireless Sensor Networks (DECSA) which describes scheduling based on distance and energy, and the Energy efficient clustering algorithm for data aggregation (EECA) are discussed. The LECSA (Load and Energy Consumption based Scheduling Algorithm) are also discussed.

**Homo Ex Data: Design Age Big Data** Burkhard Jacob,Vito Orazem,2020-03-06 - The symposium Homo ex Data - Design in the Age of Big Data and this publication mark the launch of the Red Dot Network pilot project on topical issues such as Big Data, the Internet of Things, Artificial Intelligence, Augmented Reality and Virtual Reality from a design perspective The development of social media, online services, smartphones and devices, autonomous vehicles and robots has meant that both software and hardware, programs and products, as well as computers and machines are increasingly participating in human communication. A new artificial intelligence is evolving that no longer tries to copy natural human intelligence, but incessantly collects data we make available to it by using the Internet and owning smart and mobile appliances. With the help of algorithms, behavior patterns are identified, and predictions made whose significance increase with the amount of data we supply. The articles in this book, which have been written for the symposium Homo ex Data - Design in the Age of Big Data, also show that we have more decisions to make about the subject of artificial intelligence than just those about 0 and 1. Designers whose views are expressed in this anthology and who are closely involved with the design of digital media and products will have to make further decisions if they wish to shape human activity, behavior and experience. This realization is reflected in the breadth and scope of the various contributions.
