*Human Dimension and Interior Space* Julius Panero, Martin Zelnik, 2014-01-21 The study of human body measurements on a comparative basis is known as anthropometrics. Its applicability to the design process is seen in the physical fit, or interface, between the human body and the various components of interior space. *Human Dimension and Interior Space* is the first major anthropometrically based reference book of design standards for use by all those involved with the physical planning and detailing of interiors, including interior designers, architects, furniture designers, builders, industrial designers, and students of design. The use of anthropometric data, although no substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process. This comprehensive overview of anthropometrics consists of three parts. The first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people. It provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established. The second part contains easy-to-read, illustrated anthropometric tables, which provide the most current data available on human body size, organized by age and percentile groupings. Also included is data relative to the range of joint motion and body sizes of children. The third part contains hundreds of dimensioned drawings, illustrating in plan and section the proper anthropometrically based relationship between user and space. The types of spaces range from residential and commercial to recreational and institutional, and all dimensions include metric conversions. In the Epilogue, the authors challenge the interior design profession, the building industry, and the furniture manufacturer to seriously explore the problem of adjustability in design. They expose the fallacy of designing to accommodate the so-called average man, who, in fact, does not exist. Using government data, including studies prepared by Dr. Howard Stoudt, Dr. Albert Damon, and Dr. Ross McFarland, formerly of the Harvard School of Public Health, and Jean Roberts of the U.S. Public Health Service, Panero and Zelnik have devised a system of interior design reference standards, easily understood through a series of charts and situation drawings. With *Human Dimension and Interior Space*, these standards are now accessible to all designers of interior environments.

**Visionaries and Planners** Stanley Buder,1990-07-26 For nearly a century the Garden City movement has represented one end of a continuum in an ongoing debate about the future of the modern city. In 1898 Ebenezer Howard envisioned an experimental community as the alternative to huge, teeming cities. Small, planned garden cities girdled by greenbelts were to serve in time as the master key to a higher, more cooperative stage of civilization based on ecologically balanced communities. Howard soon founded an international planning movement which ever since has represented a remarkable blend of accommodation to and protest against urban changes and the rise of the suburbs. In this interconnected history of the Garden City movement in the United States and Britain, Buder examines its influence, strengths and limitations. Howard's garden city, he shows, joined together two very different types of late-nineteenth-century experimental communities, creating a tension never fully resolved. One approach, utopian and radical in nature, challenged conventional values; the other, the model industrial towns of enlightened capitalists, reinforced them. Buder traces this tension through planning history from the nineteenth-century world of visionaries, philanthropy, and self help into our own with its reliance on the expert, bureaucracy, and governmental policy, shedding light on the complex changes in the way we have thought in the twentieth century about community, urban design, and indeed the process of change. His final chapters examine the world-wide enthusiasm for New Towns between 1945-1975 and recent political and social trends which challenge many fundamental assumptions of modern planning.

**Environment and Culture** Irwin Altman,Joachim F. Wohlwill,2013-06-29 Following upon the first two volumes in this series, which dealt with a broad spectrum of topics in the environment and behavior field, ranging from theoretical to applied, and including disciplinary, interdisciplinary, and professionally oriented approaches, we have chosen to devote subsequent volumes to more specifically defined topics. Thus, Volume Three dealt with Children and the Environment, seen from the combined perspective of researchers in environmental and developmental psychology. The present volume has a similarly topical coverage, dealing with the complex set of relationships between culture and the physical environment. It is broad and necessarily eclectic with respect to content, theory, methodology, and epistemological stance, and the contributors to it represent a wide variety of fields and disciplines, including psychology, geography, anthropology, economics, and environmental design. We were fortunate to enlist the collaboration of Amos Rapoport in the organization and editing of this volume, as he brings to this task a particularly pertinent perspective that combines anthropology and architecture. Volume Five of the series, presently in preparation, will cover the subject of behavioral science aspects of transportation. Irwin Altman Joachim F. *White Space Is Not Your Enemy* Rebecca Hagen,Kim Golombisky,2017-02-17 *White Space Is Not Your Enemy* is a practical graphic design and layout guide that introduces concepts and practices necessary for producing effective visual communication across a variety of formats—from web to print. Sections on Gestalt theory, color theory, and WET layout are expanded to offer more in-depth content on those topics. This new edition features new covering current trends in web design—Mobile-first, UI/UX design, and web typography—and how they affect a designer’s approach to a project. The entire book will receive an update using new examples and images that show a more diverse set of graphics that go beyond print and web and focus on tablet, mobile and advertising designs.

*The Environmental Psychology of Prisons and Jails* Richard Wener,2012-06-18 Jails and prisons are the only settings in which people are held against their will, possibly for long periods of time, and often with no pretense of doing so for their personal benefit. Occupants have little if any control over their lives, as, for instance, the most basic assumptions about privacy to dress, shower, and use the toilet are violated. This book addresses the impact of environmental design on inmates and staff members in jails and prisons and shows how design can dramatically affect the level of stress and violence.

Space Planning Basics Mark Karlen,2011-09-20 Space planning involves much more than sketching a preliminary floor plan. A designer must take a client's programming needs into account and must also consider how other factors such as building codes and environmental factors affect a spatial composition. *Space Planning Basics*, now in its Third Edition, offers a highly visual, step-by-step approach to developing preliminary floor plans for commercial spaces. The book provides tools for visualizing space and walks the designer through other considerations such as building code requirements and environmental control needs. Specific programming techniques covered include matrices, bubble diagrams, CAD templates, block plans, and more. New to this edition are coverage of the basics of stair design, an essential aspect for planning spaces.

**A Practical Guide to Behavioral Research** Barbara Baker Sommer,Robert Sommer,1997 Ideal for students in research methods courses and for readers seeking a clear guide to conducting behavioral studies, the fourth edition of *A Practical Guide to Behavioral Research* provides an accessible introduction to the techniques and tools of behavioral research used in psychology, sociology, and anthropology, as well as in business, education, design, and program evaluation. It offers a multi-

method, hands-on, interdisciplinary approach including observation, interviewing, questionnaire construction, experimentation, content analyses, case studies, and the use of personal documents and archival measures. Students are encouraged to learn by using statistical techniques rather than just reading about them. This revision includes a new chapter describing the research opportunities provided by using the Internet in behavioral research, and new material on the use of computers in running research studies and in data analysis. It also expands coverage of case studies and qualitative research, and introduces the role of the camera in behavioral research. Details on conference presentations and on writing technical reports and journal articles are included. This edition also features more information on work being done outside of North America. Lively and straightforward, the fourth edition of *A Practical Guide to Behavioral Research* is an indispensable tool for teachers in need of an excellent textbook, and an invaluable reference for anyone interested in behavioral studies

**Spaces Speak, Are You Listening?** Barry Blesser, Linda-Ruth Salter, 2009-09-18 How we experience space by listening: the concepts of aural architecture, with examples ranging from Gothic cathedrals to surround sound home theater. We experience spaces not only by seeing but also by listening. We can navigate a room in the dark, and hear the emptiness of a house without furniture. Our experience of music in a concert hall depends on whether we sit in the front row or under the balcony. The unique acoustics of religious spaces acquire symbolic meaning. Social relationships are strongly influenced by the way that space changes sound. In *Spaces Speak, Are You Listening?*, Barry Blesser and Linda-Ruth Salter examine auditory spatial awareness: experiencing space by attentive listening. Every environment has an aural architecture. The audible attributes of physical space have always contributed to the fabric of human culture, as demonstrated by prehistoric multimedia cave paintings, classical Greek open-air theaters, Gothic cathedrals, acoustic geography of French villages, modern music reproduction, and virtual spaces in home theaters. Auditory spatial awareness is a prism that reveals a culture's attitudes toward hearing and space. Some listeners can learn to see objects with their ears, but even without training, we can all hear spatial geometry such as an open door or low ceiling. Integrating contributions from a wide range of disciplines—including architecture, music, acoustics, evolution, anthropology, cognitive psychology, audio engineering, and many others—*Spaces Speak, Are You Listening?* establishes the concepts and language of aural architecture. These concepts provide an interdisciplinary guide for anyone interested in gaining a better understanding of how space enhances our well-being. Aural architecture is not the exclusive domain of specialists. Accidentally or intentionally, we all function as aural architects.

**Foundations for Designing User-Centered Systems** Frank E. Ritter, Gordon D. Baxter, Elizabeth F. Churchill, 2014-04-11 *Foundations for Designing User-Centered Systems* introduces the fundamental human capabilities and characteristics that influence how people use interactive technologies. Organized into four main areas—anthropometrics, behaviour, cognition and social factors—it covers basic research and considers the practical implications of that research on

system design. Applying what you learn from this book will help you to design interactive systems that are more usable, more useful and more effective. The authors have deliberately developed Foundations for Designing User-Centered Systems to appeal to system designers and developers, as well as to students who are taking courses in system design and HCI. The book reflects the authors' backgrounds in computer science, cognitive science, psychology and human factors. The material in the book is based on their collective experience which adds up to almost 90 years of working in academia and both with, and within, industry; covering domains that include aviation, consumer Internet, defense, eCommerce, enterprise system design, health care, and industrial process control.

*Organisational Space and Beyond* Karen Dale, Sytze F. Kingma, Varda Wasserman, 2018-06-14 Through the focus on organizational space, using the reception and significance of the seminal work on the subject by sociologist Henri Lefebvre, this book demonstrates why and how Lefebvre's work can be used to inform and elaborate organisational studies, especially in view of the current interest in the socio-material dimension of organisations. As the spatial turn in organisational research exposed the importance of spatial design in inducing power and cultural relations, Lefebvre's perspective has become an inspiring, theoretical framework. However, *Organisational Space and Beyond* explores how Lefebvre's work could be of a much wider relevance, especially given his profound theoretical engagement with diverse schools of philosophical and sociological thought, including Nietzsche, Marx, Sartre and Foucault. This book brings together a range of authors that collectively develop a broader understanding of Lefebvre's relevance to organizational studies, including areas of management concern such as strategy and diversity studies, and ultimately draw on Lefebvre's work to rethink, reimagine and reshape scholarship in organisational studies. It will be of relevance to researchers, academics, students and organizational professionals in the fields of organisation studies, management studies, cultural studies, architecture and sociology.

**Economic Foundations of Strategy** Joseph T. Mahoney, 2005 The theoretical foundations of management strategy are identified and outlined in this text. Five theories are considered in the light of questions about how organisations operate efficiently, cost minimization, wealth creation, individual self-interest, and continued growth.

*Schools for the Future* Rotraut Walden, 2015 Drawing on the perspectives of architectural psychology, set against the historical development of school building in the United States, Japan, and Germany, the authors' vision is to create places where we would want to relive our own school days. The book takes the position that user design, control of stress factors and control of communication (privacy, retreats) should be allowed to modify the original architectural design to flexibly accommodate future changing requirements. The development and application of criteria for assessing functional, aesthetic, social-physical, ecological, organizational and economical aspects to various parts of the school complex call for a common language for the design process. The appendix presents 24 innovative schools from countries in five continents. Contents The

Target Groups Lecturers and Students of Sociology, Environmental & Architectural Psychology, Architecture, City Planning Educators, Architects, and Policy makers involved in Planning and Running Schools Editor Rotraut Walden's (PD. Dr. phil.) major fields of research are architectural psychology and work and organizational psychology. She holds a tenure position at the Institute for Psychology of the University in Koblenz, Germany, and has been a member of the Environmental Design Research Association (EDRA) since 1989.

*Loose Space* Karen Franck, Quentin Stevens, 2006-10-16 In cities around the world people use a variety of public spaces to relax, to protest, to buy and sell, to experiment and to celebrate. *Loose Space* explores the many ways that urban residents, with creativity and determination, appropriate public space to meet their own needs and desires. Familiar or unexpected, spontaneous or planned, momentary or long-lasting, the activities that make urban space loose continue to give cities life and vitality. The book examines physical spaces and how people use them. Contributors discuss a wide range of recreational, commercial and political activities; some are conventional, others are more experimental. Some of the activities occur alongside the intended uses of planned public spaces, such as sidewalks and plazas; other activities replace former uses, as in abandoned warehouses and industrial sites. The thirteen case studies, international in scope, demonstrate the continuing richness of urban public life that is created and sustained by urbanites themselves Presents a fresh way of looking at urban public space, focusing on its positive uses and aspects. Comprises 13 detailed, well-illustrated case studies based on sustained observation and research by social scientists, architects and urban designers. Looks at a range of activities, both everyday occurrences and more unusual uses, in a variety of public spaces -- planned, leftover and abandoned. Explores the spatial and the behavioral; considers the wider historical and social context. Addresses issues of urban research, architecture, urban design and planning. Takes a broad international perspective with cases from New York, London, Berlin, Amsterdam, Rome, Guadalajara, Athens, Tel Aviv, Melbourne, Bangkok, Kandy, Buffalo, and the North of England.

**Ask a Manager** Alison Green, 2018-05-01 'I'm a HUGE fan of Alison Green's Ask a Manager column. This book is even better' Robert Sutton, author of *The No Asshole Rule* and *The Asshole Survival Guide* 'Ask A Manager is the book I wish I'd had in my desk drawer when I was starting out (or even, let's be honest, fifteen years in)' - Sarah Knight, New York Times bestselling author of *The Life-Changing Magic of Not Giving a F\*ck* A witty, practical guide to navigating 200 difficult professional conversations Ten years as a workplace advice columnist has taught Alison Green that people avoid awkward conversations in the office because they don't know what to say. Thankfully, Alison does. In this incredibly helpful book, she takes on the tough discussions you may need to have during your career. micromanaged - or not being managed at all · your boss seems unhappy with your work · you got too drunk at the Christmas party With sharp, sage advice and candid letters from real-life readers, Ask a Manager will help you successfully navigate the stormy seas of office life.

*Environment and Behavior* C. Holahan, 2012-12-06 This book has been written as a text for advanced undergraduate students and graduate students in the burgeoning field of study that has come to be called environment and behavior. It is appropriate for courses in environmental psychology, social ecology, ecological psychology, and community psychology when the community is conceptualized from an ecological viewpoint. In addition, the book may be used in design courses oriented toward an appreciation of the interaction between architecture and human behavior. The book presents a thorough explication of a perspective or viewpoint in approaching the study of environment and behavior, which has tended to be underemphasized in past work in this area. The dynamic perspective focuses on the active role people play in dealing with environmental challenges. Its investigative interest is in the processes that mediate the effects of environment on behavior, especially the positive and adaptive ways in which people cope with the environment. The accent is on the creative, complex, yet subtle character of these environmental processes.
