Beyond Bach Andrew Talle, 2017-04-07 Reverence for J. S. Bach's music and its towering presence in our cultural memory have long affected how people hear his works. In his own time, however, Bach stood as just another figure among a number of composers, many of them more popular with the music-loving public. Eschewing the great composer style of music history, Andrew Talle takes us on a journey that looks at how ordinary people made music in Bach's Germany. Talle focuses in particular on the culture of keyboard playing as lived in public and private. As he ranges through a wealth of documents, instruments, diaries, account ledgers, and works of art, Talle brings a fascinating cast of characters to life. These individuals--amateur and professional performers, patrons, instrument builders, and listeners--inhabited a lost world, and Talle's deft expertise teases out the diverse roles music played in their lives and in their relationships with one another. At the same time, his nuanced re-creation of keyboard playing's social milieu illuminates the era's reception of Bach's immortal works.

Spiking Neuron Models Wolfram Gerstner, Werner M. Kistler, 2002-08-15 Neurons in the brain communicate by short electrical pulses, the so-called action potentials or spikes. How can we understand the process of spike generation? How can we understand information transmission by neurons? What happens if thousands of neurons are coupled together in a seemingly random network? How does the network connectivity determine the activity patterns? And, vice versa, how does the spike activity influence the connectivity pattern? These questions are addressed in this 2002 introduction to spiking neurons aimed at those taking courses in computational neuroscience, theoretical biology, biophysics, or neural networks. The approach will suit students of physics, mathematics, or computer science; it will also be useful for biologists who are interested in mathematical modelling. The text is enhanced by many worked examples and illustrations. There are no mathematical prerequisites beyond what the audience would meet as undergraduates: more advanced techniques are introduced in an elementary, concrete fashion when needed.

Photonic Reservoir Computing Daniel Brunner, Miguel C. Soriano, Guy Van der Sande, 2019-07-08 Photonics has long been considered an attractive substrate for next generation implementations of machine-learning concepts. Reservoir Computing tremendously facilitated the realization of recurrent neural networks in analogue hardware. This concept exploits the properties of complex nonlinear dynamical systems, giving rise to photonic reservoirs implemented by semiconductor lasers, telecommunication modulators and integrated photonic chips.

Theatre and Metatheatre Elodie Paillard, Silvia Sueli Milanezi, 2021-11-22 The aim of this book is to explore the definition(s) of 'theatre' and 'metatheatre' that scholars use when studying the ancient Greek world. Although in modern languages their meaning is mostly straightforward, both concepts become problematical when applied to ancient reality. In fact, 'theatre' as well as 'metatheatre' are used in many different, sometimes even contradictory, ways by modern scholars. Through a series of papers examining questions related to ancient Greek theatre and dramatic performances of various genres the use of those two terms is problematized and put into question. Must ancient Greek theatre be reduced to what was performed in proper theatre-buildings? And is everything that was performed within such buildings to be considered as 'theatre'? How does the definition of what is considered as theatre evolve from one period to the other? As for 'metatheatre', the discussion revolves around the interaction between reality and fiction in dramatic pieces of all genres. The various definitions of 'metatheatre' are also explored and explicated by the papers gathered in this volume, as well as the question of the distinction between paratheatre (understood as paratragedy/comedy) and metatheatre. Readers will be encouraged by the diversity of approaches presented in this book to re-think their own understanding and use of 'theatre' and 'metatheatre' when examining ancient Greek reality.

Towards Sustainable Society on Ubiquitous Networks Makoto Oya,Ryuya Uda,Chizuko Yasunobu,2008-09-02 The massive growth of the Internet has made an enormous amount of information available to us. However, it is becoming very difficult for users to acquire an applicable one. Therefore, some techniques such as information filtering have been introduced to address this issue. Recommender systems filter information that is useful to a user from a large amount of information. Many e-commerce sites use recommender systems to filter specific information that users want out of an overload of information [2]. For example, Amazon.com is a good example of the success of recommender systems [1]. Over the past several years, a considerable amount of research has been conducted on recommendation systems. In general, the usefulness of the recommendation is measured based on its accuracy [3]. Although a high recommendation accuracy can indicate a user's favorite items, there is a fault in that only similar items will be recommended. Several studies have reported that users might not be satisfied with a recommendation even though it exhibits high recommendation accuracy [4]. For this reason, we consider that a recommendation having only accuracy is unsatisfactory. The serendipity of a recommendation is an important element when considering a user's long-term profits. A recommendation that brings serendipity to users would solve the problem of "user weariness" and would lead to exploitation of users' tastes. The viewpoint of the diversity of the recommendation as well as its accuracy should be required for future recommender systems.

The Cambridge Handbook of the Psychology of Aesthetics and the Arts Pablo P. L. Tinio,Jeffrey K.

Smith,2014-10-30 The psychology of aesthetics and the arts is dedicated to the study of our experiences of the visual arts, music, literature, film, performances, architecture and design; our experiences of beauty and ugliness; our preferences and dislikes; and our everyday perceptions of things in our world. The Cambridge Handbook of the Psychology of Aesthetics and the Arts is a foundational volume presenting an overview of the key concepts and theories of the discipline where readers can learn about the questions that are being asked and become acquainted with the perspectives and methodologies used to address them. The psychology of aesthetics and the arts is one of the oldest areas of psychology but it is also one of the fastest growing and most exciting areas. This is a comprehensive and authoritative handbook featuring essays from some of the most respected scholars in the field.

The Democratization of Artificial Intelligence Andreas Sudmann,2019-10-31 After a long time of neglect, Artificial Intelligence is once again at the center of most of our political, economic, and socio-cultural debates. Recent advances in the field of Artificial Neural Networks have led to a renaissance of dystopian and utopian speculations on an AI-rendered future. Algorithmic technologies are deployed for identifying potential terrorists through vast surveillance networks, for producing sentencing guidelines and recidivism risk profiles in criminal justice systems, for demographic and psychographic targeting

of bodies for advertising or propaganda, and more generally for automating the analysis of language, text, and images. Against this background, the aim of this book is to discuss the heterogeneous conditions, implications, and effects of modern AI and Internet technologies in terms of their political dimension: What does it mean to critically investigate efforts of net politics in the age of machine learning algorithms?
