Programación Didáctica. 4º ESO, Matemáticas Opción B Conrado Gallent Falcó, Patricia Barbero Fenollar, 2013-05-31 El siguiente libro está orientado a aquellas personas que decidan opositar al Cuerpo de Profesores de Enseñanza Secundaria, en la especialidad de Matemáticas; también se dirige a aquellos profesores que ya pertenezcan a dicho Cuerpo y especialidad, y que en su conjunto constituyen el departamento de matemáticas presente en cada instituto, y que deseen profundizar y ampliar estos aspectos. Para este fin, se ha diseñado el actual libro, donde se detallan punto por punto los aspectos fundamentales de una programación didáctica, en este caso particular la asignatura de 4º de E.S.O. Matemáticas Opción B, los cuales se pueden extrapolar a cualquier otro curso. Además, se tiene la ventaja de que está actualizada según los últimos decretos y órdenes establecidos por la ley, referentes a la Educación Secundaria en la Comunidad Valenciana. Esto no es óbice para que opositores de otras comunidades autónomas puedan utilizarlo, puesto que, aun siendo diferentes los decretos y las órdenes, la estructura en todos los casos es la misma. En la última parte del libro, se ejemplifican 3 unidades didácticas de la programación comentada en el punto anterior. También están explicados con precisión los aspectos básicos que deben contener, además de un compendio de ejercicios de refuerzo, consolidación, ampliación, etc. destinados según la capacidad de cada alumno, en cada una de estas unidades. Todo ello para que el lector encuentre su lectura lo más provechosa y placentera posible.

Actividades de Matemáticas. 4o ESO Jesús Molina Núñez, Antonio Manuel García Barberá, Roland Calvo Calabuig, 2013-09-27 El título del libro, *Actividades de matemáticas 4o de ESO*, refleja el criterio seguido en su concepción. Cada secuencia de actividades se ha concebido para que se puedan adquirir de forma gradual los contenidos y se superen los objetivos del ciclo. Permite una participación activa del alumnado en su proceso de aprendizaje, dándole la posibilidad de trabajar de forma autónoma. No se trata de una sucesión de actividades alrededor de un contenido, sino que las mismas están diseñadas para que el alumnado: piense, reflexione e interiorice. Desde el punto de vista docente, esta autonomía en el proceso de aprendizaje se convierte en una herramienta necesaria en la atención a la diversidad. El libro ha sido pensado para las dos opciones y se han señalado con la letra B aquellos temas o actividades “recomendables” sólo para la opción B. Este libro junto con el de *Matemáticas 3o de ESO. Actividades* completan el currículo del segundo ciclo de la ESO.

Enfoques actuales en la didáctica de las matemáticas Pilar Azcárate Goded, 2006 La obra intenta dar un nuevo enfoque a la enseñanza de las Matemáticas, desde un punto de vista eminentemente práctico.

¡Odiosas matemáticas! Anaitz García de Cortazar Martín, 2020-04-22 Libro que recoge tema a tema explicaciones y ejercicios resueltos sobre matemáticas aplicadas del temario de 4º ESO. Cada unidad tiene ejercicios propuestos para que el alumnado pueda poner a prueba sus capacidades tras estudiar los que aparecen resueltos

Competencias del profesor de matemáticas de secundaria y bachillerato (eBook) Vicenç Font, Joaquín Giménez, Víctor Larios, Juan Fidel Zorrilla, 2012-12-11 La presente obra constituye una aportación fundamental al intercambio de conocimientos sobre propuestas instruccionales para el desarrollo de competencias profesionales y su didáctica en la formación inicial y permanente de profesores, así como al desarrollo de la competencia de los futuros docentes en el análisis didáctico de secuencias de enseñanza y aprendizaje que les faciliten su descripción y valoración. Como resultado del seminario internacional celebrado en 2010 en Santiago de Querétaro (México), profesores de la Universidad Nacional Autónoma de México, de la Universidad Autónoma de Querétaro y de la Universidad de Barcelona abordan el contexto

institucional tanto español como mexicano en el que se forman los profesores; la problemática del desarrollo de sus competencias profesionales, y, como botón de muestra, presentan un material didáctico elaborado específicamente para la formación de futuros docentes.

Introductory Mathematical Analysis for Students of Business and Economics Ernest F. Haeussler, Richard S. Paul, 1980

Pruebas de la evaluación de 4º curso de educación secundaria obligatoria. Curso 2016-2017, La Ley Orgánica 2/2006, de 3 de mayo, de Educación (LOE), modificada por la Ley Orgánica 8/2013, de 9 de diciembre, de Mejora de la Calidad Educativa (LOMCE), establece la implantación en el curso 2016-2017 de las evaluaciones finales de etapa en Educación Secundaria Obligatoria (ESO). Por su parte, el Real Decreto-ley 5/2016, de 9 de diciembre, de medidas urgentes para la ampliación del calendario de implantación de la LOMCE, establece que, hasta la entrada en vigor de la normativa resultante del Pacto de Estado social y político por la educación, esta evaluación tendrá finalidad diagnóstica y carácter muestra. La Orden ECD/393/2017, de 4 de mayo, que regula la evaluación final de ESO, para el curso 2016/2017 propone un modelo de evaluación no basado en la memorización de aprendizajes conceptuales, sino en el desarrollo y fomento de las competencias clave que el alumnado debe adquirir. En concreto, las competencias evaluadas son la competencia lingüística, la competencia matemática y la competencia social y cívica, teniendo como referencia principal las materias generales del bloque de asignaturas troncales cursadas en cuarto de ESO. Pruebas de la evaluación de 4º curso de Educación Secundaria Obligatoria. Curso 2016-2017 agrupa, en un solo volumen, las pruebas, con sus correspondientes guías de codificación para cada una de las competencias evaluadas, que realizó en dicho año académico el alumnado escolarizado en los centros de las ciudades autónomas de Ceuta y Melilla, en los centros docentes en el exterior dependientes del MECO y en el Centro para la Innovación y Desarrollo de la Educación a Distancia (CIDEAD). Confiamos en que esta publicación proporcione al profesorado de Educación Secundaria y a otros profesionales y miembros de la comunidad educativa unos atractivos ejemplos que les ayuden a reflexionar y mejorar la enseñanza y evaluación de las competencias clave.

Topología diferencial Enrique Outerelo Domínguez, Juan Ángel Rojo, Jesús María Ruiz Sancho, 2023-07-27 A finales del siglo XX, año 1998, dos de los autores de este texto publicamos uno basado en la experiencia de impartir diversos cursos de Topología Diferencial en el Departamento de Geometría y Topología de la Facultad de Ciencias Matemáticas de la Universidad Complutense de Madrid. Se recogían en él las ideas centrales de transversalidad y aproximación en variedades con borde: los métodos que introdujo Thom a mediados del siglo XX, y que permiten hacer, en frase acuñada por Milnor «topología desde el punto de vista diferenciable». Efectivamente, producen de manera extremadamente elegante resultados muy importantes. Muchos colegas usaron aquel texto en sus cursos e hicieron comentarios y sugerencias, y luego, ya descatalogado, aún preguntaban por él. Este halago nos empujó a escribir otro nuevo ya en este siglo, año 2014. Inevitablemente, nuestro punto de vista sobre cómo se desarrolla un curso de iniciación de Topología Diferencial había variado con los años. Así, aunque fieles a la idea original, produjimos un texto distinto en aspectos relevantes. Aquí fue esencial la contribución del autor que no estuvo en aquella aventura inicial. Hubo después en 2020 una reedición sustancialmente revisada, y ahora el lector tiene en sus manos ésta con más mejoras. Todas las revisiones son el fruto de explicar el texto en el aula, en el Master de Matemáticas Avanzadas de la UCM. Los cambios introducidos han derivado en buena parte del entusiasmo de nuestros alumnos por aprender y les agradecemos haber elegido nuestras clases. Muchas personas nos han ayudado en estas reediciones, y no podemos nombrarlas a todas, pero como representación queremos citar a Jaime J. Sánchez Gabites, cuyas observaciones han sido verdaderamente iluminadoras. En fin, de nuevo agradecemos a Sanz y Torres que continuamente apoya nuestro deseo de perfeccionar el libro. Este texto está pensado para un cuatrimestre a razón de cinco horas semanales, contando con el trabajo individual de cada estudiante. El objetivo es explicar qué es la transversalidad y cómo se utiliza junto con la aproximación para abordar problemas topológicos. Las treinta y cuatro secciones de sus cuatro capítulos se enumeran en la página IX y sus títulos dan razón precisa de las etapas del recorrido que proponemos. La salida es la definición de variedad con borde y la meta son seis teoremas fundamentales: el del punto fijo de Brouwer, el de invarianza del dominio, el de separación de Jordan-Brouwer, el de homotopía de Brouwer-Hopf, el de la esfera de Brouwer y el de Borsuk-Ulam. Señalemos que: (1) Consideramos siempre variedades sumergidas en un espacio afín, pero incluimos una prueba elemental a partir de las definiciones de que las variedades diferenciables abstractas son todas sumergidas. (2) Construimos de manera explícita directa los entornos tubulares de una variedad diferenciable en un espacio afín y las retracciones propias diferenciables asociadas. (3) Detallamos la construcción de collares de una variedad con borde, sin utilizar flujos, y de las correspondientes retracciones propias continuas (diferenciables no pueden ser). (4) Demostramos los resultados completos de aproximación y homotopía diferenciables para aplicaciones con valores en variedades con borde. En las fuentes que conocemos estos resultados de aproximación y homotopía se formulan sólo para

aplicaciones con valores en variedades sin borde. El argumento habitual apela a las retracciones diferenciables, y por ello no vale para variedades con borde. Aquí utilizamos collares para complementar ese argumento y poder establecer los resultados sin restricciones de borde. Todo esto es ciertamente parte del folklore de los especialistas, pero es bueno escribir ese folklore alguna vez. En otro orden de cosas, hacemos una simplificación grande de la presentación limitándonos a variedades de clase infinito, que denominamos simplemente variedades diferenciables. El tratamiento de la clase finita supone, o bien el registro cuidadoso de las pérdidas de diferenciabilidad que sobrevengan, o bien algún método adicional de recuperación de esas pérdidas. Pensamos que lo primero no aportaría nada significativo, mientras que lo segundo aumentaría demasiado la dificultad de un curso de iniciación. Insistimos en calificar este libro de texto porque la exposición está depurada al máximo para que se pueda impartir linealmente y sea verdaderamente abarcable. Y como libro de texto que es, incluye una colección de problemas (200), refuerzo y complemento de la materia presentada. Enrique Outerelo, Juan Ángel Rojo, Jesús M. Ruiz

De la aritmética al álgebra Salazar Guerrero, Ludwig, 2020-11-04 En esta obra se pretende despertar el interés y el gusto por el estudio del álgebra mediante diversos recursos didácticos diseñados bajo el enfoque por competencias. Mediante estos recursos como lecturas, ejercicios, problemas, juegos matemáticos se induce a los alumnos a organizar y desarrollar ideas, fundamentar opiniones, pero sobre todo a desarrollar modelos matemáticos que les ayuden a la resolución de diferentes problemas. Los problemas que se plantean en la obra están diseñados para ser resueltos en equipo con una metodología que garantiza una adecuada organización en el trabajo colaborativo.

Handbook of Research Design in Mathematics and Science Education Anthony Edward Kelly, Richard A. Lesh, 2012-10-12 The Handbook of Research Design in Mathematics and Science Education is based on results from an NSF-supported project (REC 9450510) aimed at clarifying the nature of principles that govern the effective use of emerging new research designs in mathematics and science education. A primary goal is to describe several of the most important types of research designs that: * have been pioneered recently by mathematics and science educators; * have distinctive characteristics when they are used in projects that focus on mathematics and science education; and * have proven to be especially productive for investigating the kinds of complex, interacting, and adapting systems that underlie the development of mathematics or science students and teachers, or for the development, dissemination, and implementation of innovative programs of mathematics or science instruction. The volume emphasizes research designs that are intended to radically increase the relevance of research to practice, often by involving practitioners in the identification and formulation of the problems to be addressed or in other key roles in the research process. Examples of such research designs include teaching experiments, clinical interviews, analyses of videotapes, action research studies, ethnographic observations, software development studies (or curricula development studies, more generally), and computer modeling studies. This book's second

goal is to begin discussions about the nature of appropriate and productive criteria for assessing (and increasing) the quality of research proposals, projects, or publications that are based on the preceding kind of research designs. A final objective is to describe such guidelines in forms that will be useful to graduate students and others who are novices to the fields of mathematics or science education research. The NSF-supported project from which this book developed involved a series of mini conferences in which leading researchers in mathematics and science education developed detailed specifications for the book, and planned and revised chapters to be included. Chapters were also field tested and revised during a series of doctoral research seminars that were sponsored by the University of Wisconsin's OERI-supported National Center for Improving Student Learning and Achievement in Mathematics and Science. In these seminars, computer-based videoconferencing and www-based discussion groups were used to create interactions in which authors of potential chapters served as guest discussion leaders responding to questions and comments from doctoral students and faculty members representing more than a dozen leading research universities throughout the USA and abroad. A Web site with additional resource materials related to this book can be found at <http://www.soe.purdue.edu/smsc/lesh/> This internet site includes directions for enrolling in seminars, participating in ongoing discussion groups, and submitting or downloading resources which range from videotapes and transcripts, to assessment instruments or theory-based software, to publications or data samples related to the research designs being discussed.
