Omega-6/Omega-3 Essential Fatty Acid Ratio: The Scientific Evidence A. P. Simopoulos,L. G. Cleland,Berthold Koletzko,2003-07 Studies on the evolutionary aspects of diet and molecular studies included in this volume indicate that human beings evolved on a diet that was balanced in the essential fatty acids (EFA). In fact, the ratio of omega-6/omega-3 EFA was 1/1 whereas present day diets in both developed and developing countries have a much higher ratio, between 5/1 and 50/1. Additional studies show that a high ratio of omega-6/omega-3 EFA is detrimental to health and may lead to the development of chronic diseases. Improving the dietary ratio by decreasing the omega-6 fatty acids and increasing the omega-3 fatty acids is essential for brain function and for the management of cardiovascular disease, arthritis and cancer. A ratio of 4/1 or less leads to lower dosage and to the reduction of adverse effects of drugs. This volume should be of interest to a large and varied audience of researchers in academia, industry, and government; cardiologists, geneticists, immunologists, neuroscientists, and cancer specialists; as well as nutritionists, dietitians, food scientists, agriculturists, economists and regulators.

Enzymatic Methods of Analysis George G. Guilbault,2013-10-22 Enzymatic Methods of Analysis attempts to cover all the

aspects of modern enzymatic analysis. Enzymes possess a great potential usefulness in analytical chemistry. The specificity of enzymes can solve the primary problem of most analytical chemists—the analysis of one substance in the presence of many similar compounds that interfere in the analysis. The book begins with two introductory chapters devoted to general considerations of enzymes as reagents and methods of analysis of enzymatic reactions. The next four chapters deal with methods for the assay of specific enzymes, and substrate, activator, and inhibitor analysis using enzymes. In the last two chapters the immobilization of enzymes and the automation of enzymatic reactions are discussed. In addition, a listing of all commercially available enzymes is given in an appendix. It is hoped that the information presented will prove interesting and stimulating to all individuals engaged in research and development.

Banana: Genomics and Transgenic Approaches for Genetic Improvement Sukhada Mohandas, Kundapura V. Ravishankar, 2016-09-08 Bananas and plantains are among the most important food and cash crops in the world. They are cultivated in more than 135 countries, across the tropics and subtropics, with an annual global production of ca. 130 million metric tonnes. Though bananas are one of the most important components of food security in many developing countries, banana production is threatened by both abiotic and biotic stresses. These include a wide range of diseases and pests, such as bunchy top virus, burrowing nematodes, black Sigatoka or black leaf streak, Fusarium wilt, etc. In recent years, considerable progress has been made and several biotechnological and genomic tools have been employed to help understand and unravel the mysterious banana genome. Molecular and genomic studies have helped to decipher the Musa genome and its evolution. Genetic linkage map and whole genome sequencing of both Musa acuminata and Musa balbisiana (progenitors of cultivated banana) have completely changed the way of thinking and the approach on banana crop improvement. Whole-genome sequencing has helped to improve the selection of quantitative traits such as yield, as well as the selection of optimal parents for developing required hybrids in breeding programs. Gene isolation and the analysis of mutants have helped in the characterization of genes of agronomic value and the associated regulatory sequences. With the advent of molecular markers and new statistical tools, it is now possible to measure the diversity, identify genes and useful alleles linked to important agronomic traits. Further these alleles can be incorporated into cultivars through marker assisted selection or through transgenic approach. Transgenic approaches are potential tools for direct transfer of these genes into popular cultivars, which are generally not amenable for conventional breeding techniques, in specific with crops such as bananas which are sterile, triploid and heterozygous thereby making it difficult to reconstruct the recurrent genotypes in banana. Transgenic techniques thus have helped overcome the difficulty of working with sterile, triploid banana crop. In the

last five years, enormous amount of new information and techniques have been generated for banana. A comprehensive book entitled “Banana: Genomics and Transgenic Approaches for Genetic improvement” on banana genomics, latest transgenic technologies and tools available for improved crop development in banana will address all these requirements.

Carotenoids, Volume 3: Biosynthesis and Metabolism G. Britton,S. Liaaen-Jensen,H. Pfander,1998-10-26 Volume 3 of the Carotenoids series moves into the area of biochemistry & biology, concentrating on how the carotenoid molecules are formed in nature & utilized or modified by living organisms. Animals cannot biosynthesize carotenoids de novo. Dietary carotenoids provide most of the vitamin A that is vital for health & development in humans & other mammals. The formation of vitamin A & the absorption, transport & deposition of carotenoids in tissues in mammals are described, followed by a detailed account of the diverse metabolic reactions by which dietary carotenoids undergo structural & stereochemical changes in birds, fish & invertebrate animals. The relevance of carotenoids for use as markers to trace food chains is also discussed. In keeping with the philosophy of the carotenoid series guidance on the application of some of the most important experimental procedures for studies of biosynthesis & metabolism are given in the final chapter. The information presented & analyzed by expert authors in this volume will serve as a useful reference source, & give valuable guidance on practical strategies & procedures, as a foundation for the exciting advances that can be expected in carotenoid biosynthesis & metabolism in the next few years.

Crop Improvement Khalid Rehman Hakeem,Parvaiz Ahmad,Munir Ozturk,2013-06-13 The improvement of crop species has been a basic pursuit since cultivation began thousands of years ago. To feed an ever increasing world population will require a great increase in food production. Wheat, corn, rice, potato and few others are expected to lead as the most important crops in the world. Enormous efforts are made all over the world to document as well as use these resources. Everybody knows that the introgression of genes in wheat provided the foundation for the “Green Revolution”. Later also demonstrated the great impact that genetic resources have on production. Several factors are contributing to high plant performance under different environmental conditions, therefore an effective and complementary use of all available technological tools and resources is needed to meet the challenge.

The Rise of the Joyful Economy Michael Hutter,2015-03-24 This book argues for the increasing importance of the arts as a major resource in fuelling growth through the experiential dimension of today’s economy. As we move from the knowledge economy to a new stage called the joyful economy, consumers shift their spending from physical objects and technical know-how to experiences of joy and disappointment. This book investigates how artistic ideas are translated into successful commercial production, and how economic growth impacts artistic invention. It examines cases of successful innovation in the creative industries ranging from the Italian Renaissance to the present. The book suggests a framework where social players move in diverse worlds of value, which leads to a stream of controversies and manias that result in the establishment of new joy products. Studies include the effect of linear perspective, as pioneered by Filippo Brunelleschi, the discovery of taste as an argument for consumption, the serial production of Pop Art and the self-commercialization of contemporary works by artists like Takashi Murakami . This theoretical and empirical study brings together the fields of cultural economics, economic sociology, management studies and cultural history. In doing so, it offers a fascinating study of how creativity has shaped and fuelled commerce.

The Shadow of the Coachman's Body Peter Weiss,2022-04-26 A meticulously observed and macabre tale of hell on earth from the revolutionary German author of the famous play Marat/Sade Peter Weiss’s first prose work, The Shadow of

the Coachman's Body, was unanimously praised as an original and perfect work of art by critics when it appeared in 1960. Here, in poet Rosmarie Waldrop's stunning translation, Weiss arranges a dark, vividly alive comedy of inert objects in a dismal boarding house—stones, buttons, hooks, needles, chairs, newspapers in an outhouse, clinking tin cups, celestial orbs, sewing machines, an overwound windup music box—which have oblique characters' shadows as their supporting cast. Described by Weiss as a "micro-novel," *The Shadow of the Coachman's Body* can be obscene, trivial and brutal, and yet it is also peculiarly intimate and offers endless possibilities—like a telescope and kaleidoscope rolled into one.

Avian (Poultry) Production Carin Fisker, 2016-04-01 Poultry has a crucial place worldwide as the eggs and chicken meat are important and rich sources of protein, vitamins and minerals. Poultry provides rich organic manure and is an important source of income and employment to millions of farmers and other persons engaged in allied activities in the poultry industry. Chickens and turkeys that are commercially raised today are the result of many years of selection and breeding of two or more breeds to continually improve productivity. Poultry farming is the raising of domesticated birds such as chickens, ducks, turkeys and geese for the purpose of farming meat or eggs for food. Poultry are farmed in great numbers with chickens being the most numerous. More than 50 billion chickens are raised annually as a source of food, for both their meat and their eggs. The chicken industry is made up of meat-producing chickens and egg-producing chickens. The modern meat-type chicken is derived from the deep-breasted Cornish breed and has been selected with an emphasis on producing meat rather than eggs. Further processing of meat chickens has led to many new products geared to the convenience-minded consumer, such as boneless, skinless breasts. The turkey industry has developed strains of birds with an emphasis on meat production and breast size, as the white meat has a higher market value in the United States. Many pure breeds of poultry are raised for exhibition, hobby and/or breed preservation purposes. There is lots to discover with the comprehensive poultry production. We all know that in order to get the best out of birds, poultry keepers need to be up to date with the latest ideas and techniques. The book *Avian (Poultry) Production* discusses about the anatomy and physiology of birds, building them the best housing, breeding, egg production and also about preventing parasites and diseases.
