Finding San Carlino Adil Mansure,Skender Luarasi,2019-12-06 The church of San Carlo alle Quattro Fontane, also called San Carlino, is an architectural artefact that continues to attract numerous hypotheses and geometric analyses attempting to explain its form and meaning. Numerous investigations have attempted to reveal its underlying geometrical principles, without, however, reaching a consensus. Finding San Carlino presents an edited collection of perspectives on Borromini's famous Baroque church from a range of established and emerging scholars in architectural history and theory, including Werner Oechslin, Karsten Harries, Michael Hill and Lauren Jacobi amongst others. This book offers the reader different means of engaging with, enjoying and articulating San Carlino's complexity, non-consensus and ambiguity. It is precisely such a unique disposition that motivates this book to explore multiple modes of architectural enquiry and delve into a series of theoretical and historiographical questions such as: why was Borromini not able to post-rationalize his architecture with his drawings? What is San Carlino's exemplary value, and why does it continually engender exegetical and hermeneutic desire? What is the role of geometry in architecture, in history and today? Written for researchers, scholars and postgraduate students in architectural history and theory, the book uses San Carlino as an enigmatic centering point for a set of significant contemporary voices to explore new modes of confrontation and comparison.

Italy Ros Belford,Martin Dunford,Celia Woolfrey,2003 From Mantua's Pallazo Ducale to the precipitous coves of the Tyrrhenian coast, this book guides the independent-minded traveler through one of the most adored countries in the world. of color photos. 82 maps.

Borromini (Revised) Anthony Blunt,1979 At first glance, Borromini's architecture is a flight of Baroque fantasy, the product of limitless imagination. A closer look reveals an almost ruthlessly logical geometry underlying his creation. Blunt shows how the combination of revolutionary inventiveness and intellectual control gives Borromini's work its great appeal.

All Sides to an Oval Angelo Alessandro Mazzotti,2017-02-28 This is the only book dedicated to the Geometry of Polycentric Ovals. It includes problem solving constructions and mathematical formulas. For anyone interested in drawing or recognizing an oval, this book gives all the necessary construction and calculation tools. More than 30 basic construction

problems are solved, with references to Geogebra animation videos, plus the solution to the Frame Problem and solutions to the Stadium Problem. A chapter (co-written with Margherita Caputo) is dedicated to totally new hypotheses on the project of Borromini's oval dome of the church of San Carlo alle Quattro Fontane in Rome. Another one presents the case study of the Colosseum as an example of ovals with eight centres. The book is unique and new in its kind: original contributions add up to about 60% of the whole book, the rest being taken from published literature (and mostly from other work by the same author). The primary audience is: architects, graphic designers, industrial designers, architecture historians, civil engineers; moreover, the systematic way in which the book is organised could make it a companion to a textbook on descriptive geometry or on CAD.

San Carlino alle Quattro Fontane: ampliamento e modifiche settecentesche al progetto borrominiano | San Carlino alle Quattro Fontane: eighteenth-century enlargement and changes to Borromini's design Marta Grau Fernandez, Ignacio Bosch Reig, 2017-03-08T00:00:00+01:00 Il presente articolo è incentrato sullo studio - fino ad oggi mai realizzato - dell'ampliamento del convento di San Carlino alle Quattro Fontane realizzato agli inizi del secolo XVIII dall'architetto Alessandro Sperone, che ha prodotto significative alterazioni formali e funzionali nel progetto originale di Borromini. I documenti dell'Archivio di San Carlino - fino ad oggi inediti e dispersi - sono stati durante la ricerca tradotti e sintetizzati in elaborati, schemi, tavole e testi che consentono una visione unitaria dell'insieme e permettono di individuare la configurazione originale di entrambi i progetti e gli interventi più significativi realizzati nel corso dei secoli. | This article focuses on the unpublished study of the enlargement of the convent of San Carlino alle Quattro Fontane performed in the early eighteenth century by the architect Alessandro Sperone. The enlargement made important formal and functional changes to Borromini's original design. During the research, documents in the Archive of San Carlino - as yet unpublished and scattered - were translated and condensed in drawings, diagrams, tables and texts to not only provide a unitary vision of the ensemble, but also identify the original configuration of both projects and the most important interventions made over the centuries.

Visual Geometry and Topology Anatolij T. Fomenko, 2012-12-06 Geometry and topology are strongly motivated by the

visualization of ideal objects that have certain special characteristics. A clear formulation of a specific property or a logically consistent proof of a theorem often comes only after the mathematician has correctly seen what is going on. These pictures which are meant to serve as signposts leading to mathematical understanding, frequently also contain a beauty of their own. The principal aim of this book is to narrate, in an accessible and fairly visual language, about some classical and modern achievements of geometry and topology in both intrinsic mathematical problems and applications to mathematical physics. The book starts from classical notions of topology and ends with remarkable new results in Hamiltonian geometry. Fomenko lays special emphasis upon visual explanations of the problems and results and downplays the abstract logical aspects of calculations. As an example, readers can very quickly penetrate into the new theory of topological descriptions of integrable Hamiltonian differential equations. The book includes numerous graphical sheets drawn by the author, which are presented in special sections of Visual material. These pictures illustrate the mathematical ideas and results contained in the book. Using these pictures, the reader can understand many modern mathematical ideas and methods. Although Visual Geometry and Topology is about mathematics, Fomenko has written and illustrated this book so that students and researchers from all the natural sciences and also artists and art students will find something of interest within its pages.

The Monumental Impulse George L. Hersey, 2001 A highly original view of the relationship between architecture and the biological sciences.

Architecture Constructed Mark Jarzombek, 2023-04-06 Architecture Constructed explores the central, open secret of architecture: the long-suppressed conflict between arche and teckton-between those who design, and those who build. This unresolved tension has a centuries-old history in the discipline, persisting through Classical and Renaissance times to the present day, and yet it has rarely been addressed through a historical and theoretical lens. In this book, acclaimed architectural theorist Mark Jarzombek examines this tension head-on, and uses it to rethink the nature of the history of architecture. He reveals architecture to be a troubled, interconnected realm, incomplete and unstable, where labor, craft, and occupation are the 'invisible' complements to the work of the architect. Erudite, entertaining, and full of surprising and thought-provoking juxtapositions and challenges, Architecture Constructed is packed with novel insights into the internal conflicts and paradoxes of architecture, and is rich with examples from modern and contemporary practice-including Mies, Koolhaas, Potrc, Hadid, Bawa, Diller + Scofidio-which demonstrate how contemporary architecture inhabits the very same

tensions that have riven the discipline since the days of Alberti. This provocative book will stimulate conversations among students, researchers, and designers, as it pushes the boundaries on how we define the professional discipline of architecture and overturns entrenched assumptions about the nature of architectural history and theory.

Fenestration Practice and Theory in Early Modern Europe Hentie Louw, 2024-06-05 This book explores the transformation of the window during the Early Modern Period in Europe. Following the Italian Renaissance, new stylistic norms for modern 'classical windows' had to be invented. Building a new classical repertoire drew on existing traditions in fenestration as local builders throughout Europe struggled with the constraints of varying climatic conditions, customs and physical resources in pursuit of a broader vision of an international classical revival. With the Renaissance, the architectural emphasis shifted towards secular design and, as the classical revival gained momentum, a quest for a cultured lifestyle commensurate with the new architecture increased demand for sophisticated fenestration systems in civil architecture. The movement coincided with a period of dramatic climate change, the so-called Little Ice Age (c. 1450 - c.1850), adding urgency to the campaign for transforming fenestration practice. By the late seventeenth century, Northern European builders had developed appropriate indigenous 'classical' window forms for their respective societies - functional products sophisticated enough to form the basis of new architectural styles: northern classical traditions that rivalled (and in some respects, surpassed) those created in Italy. Their achievement was embodied in the two flagships of the movement: the Franco-Italian folding casement (the 'French window'), and the English mechanical sliding window (the 'sash window').

The Stolen Bones of St. John of Matha A. Katie Harris, 2023-11-03 On the night of March 18, 1655, two Spanish friars broke into a church to steal the bones of the founder of their religious institution, the Order of the Most Holy Trinity. This book investigates this little-known incident of relic theft and the lengthy legal case that followed, together with the larger questions that surround the remains of saints in seventeenth-century Catholic Europe. Drawing on a wealth of manuscript and print sources from the era, A. Katie Harris uses the case of St. John of Matha's stolen remains to explore the roles played by saints' relics, the anxieties invested in them, their cultural meanings, and the changing modes of thought with which early modern Catholics approached them. While in theory a relic's authenticity and identity might be proved by supernatural

evidence, in practice early modern Church authorities often reached for proofs grounded in the material, human world—preferences that were representative of the standardizing and streamlining of sixteenth- and seventeenth-century saint-making. Harris examines how Matha’s advocates deployed material and documentary proofs, locating them within a framework of Scholastic concepts of individuation, identity, change, and persistence, and applying moral certainty to accommodate the inherent uncertainty of human evidence and relic knowledge. Engaging and accessible, *The Stolen Bones of St. John of Matha* raises an array of important questions surrounding relic identity and authenticity in seventeenth-century Europe. It will be of interest to students, scholars, and casual readers interested in European history, religious history, material culture, and Renaissance studies.

Handbook of Research on Visual Computing and Emerging Geometrical Design Tools Amoruso, Giuseppe, 2016-04-11 Visual computing and descriptive geometry are multidisciplinary fields addressing the handling of images, 3D models, and other computer graphics. These ideas are experiencing a revival due to emergent technologies and applications available to developers. Based in traditional forms of design and architecture, these fields are currently experiencing a bounty of new research based on old principles. The *Handbook of Research on Visual Computing and Emerging Geometrical Design Tools* seeks to add to this knowledge base by considering these technologies from a designer’s perspective rather than reiterating the principles of computer science. It combines aspects of geometry and representation with emerging tools for CAD, generation, and visualization while addressing the digital heritage of such fields. This book is an invaluable resource for developers, students of both graphic and computer-generated design, researchers, and designers.
