The Web of Life Fritjof Capra, 1997-09-15 The vitality and accessibility of Fritjof Capra's ideas have made him perhaps the most eloquent spokesperson of the latest findings emerging at the frontiers of scientific, social, and philosophical thought. In his international bestsellers *The Tao of Physics* and *The Turning Point*, he juxtaposed physics and mysticism to define a new vision of reality. In *The Web of Life*, Capra takes yet another giant step, setting forth a new scientific language to describe interrelationships and interdependence of psychological, biological, physical, social, and cultural phenomena—the web of life. During the past twenty-five years, scientists have challenged conventional views of evolution and the organization of living systems and have developed new theories with revolutionary philosophical and social implications. Fritjof Capra has been at the forefront of this revolution. In *The Web of Life*, Capra offers a brilliant synthesis of such recent scientific breakthroughs as the theory of complexity, Gaia theory, chaos theory, and other explanations of the properties of organisms, social systems, and ecosystems. Capra's surprising findings stand in stark contrast to accepted paradigms of mechanism and Darwinism and provide an extraordinary new foundation for ecological policies that will allow us to build and sustain communities without diminishing the opportunities for future generations. Now available in paperback for the first time, *The Web of Life* is cutting-edge science writing in the tradition of James Gleick's *Chaos*, Gregory Bateson's *Mind and Matter*, and Ilya Prigogine's *Order Out of Chaos*.

Lixo Humano ou Humano Lixo Rafael Gustavo Cavichiolo, 2025-01-29 O lixo representa um evidente incômodo em nossas vistas. Fazemos questão de afastá-lo ou evitá-lo sempre que possível. Essa é a principal premissa em torno da resolução desse problema, que por vezes parece ser insolúvel. Trata-se de um traço marcante da condição humana, pois sem nós, não existe lixo. Procurar aproximar o lixo das questões humanas é o principal desafio enfrentado neste livro. Compreender a dimensão do problema, a partir de uma perspectiva global, com análise dos dados brasileiros, representou considerável desafio. A aproximação do lixo com as questões definidas como degradantes da condição humana constituiu uma nova perspectiva, possibilitando o emprego de um termo da área ambiental no âmbito das questões humanas. O trocadilho que forma o título é uma provocação natural que especula a perigosa situação em que a humanidade está

gradualmente se colocando, na beira de um colapso.

Family Evaluation Murray Bowen, Michael E. Kerr, 2009-08-01 The concepts of Murray Bowen, one of the founders of family therapy and the originator of family systems theory, are brought together here in an integrative fashion. Michael Kerr (who worked with Bowen for many years) and Bowen propose that the enormously complex task of evaluating a clinical family can be orderly when it is grounded in family systems theory. Using family diagrams and case studies, the book is devoted to an elegant explication of Bowen theory, which analyzes multigenerational family relationships and conceptualizes the family as an emotional unit or as a network of interlocking relationships, not only among the family members, but also among biological, psychological, and sociological processes. Bowen's persistent inquiry and devotion to family observation, in spite of obstacles and frustrations, have resulted in a theory that has radically changed our ways of looking at all behavior.

University Teaching James J.F. Forest, 2014-04-08 University and college teaching is an important topic in the study of higher education around the world. This collection of original essays provides a broad perspective on the issue by examining preparation, assessment, and reward from cross-cultural perspectives, and exploring the cultural and social influences that affect these dimensions.

The Human Use Of Human Beings Norbert Wiener, 1988-03-22 Only a few books stand as landmarks in social and scientific upheaval. Norbert Wiener's classic is one in that small company. Founder of the science of cybernetics—the study of the relationship between computers and the human nervous system—Wiener was widely misunderstood as one who advocated the automation of human life. As this book reveals, his vision was much more complex and interesting. He hoped that machines would release people from relentless and repetitive drudgery in order to achieve more creative pursuits. At the same time he realized the danger of dehumanizing and displacement. His book examines the implications of cybernetics for education, law, language, science, technology, as he anticipates the enormous impact—in effect, a third industrial revolution—that the computer has had on our lives.

Annual Review of Information Science and Technology Information Today Inc, 2005-10 ARIST, published annually since 1966, is a landmark publication within the information science community. It surveys the landscape of information science and technology, providing an analytical, authoritative, and accessible overview of recent trends and significant developments. The range of topics varies considerably, reflecting the dynamism of the discipline and the diversity of theoretical and applied perspectives. While ARIST continues to cover key topics associated with classical information science (e.g., bibliometrics, information retrieval), editor Blaise Cronin is selectively expanding its footprint in an effort to connect information science more tightly with cognate academic and professional communities. Contents of Volume 40 (2006): SECTION I: Information and Society Chapter 1: The Micro- and Macroeconomics of Information, Sandra Braman Chapter 2: The Geographies of the Internet, Matthew Zook Chapter 3: Open Access, M. Tourism Theory Guilherme Lohmann,Alexandre Panosso Netto,2016-12-07 Theories within tourism can be difficult, even confusing areas to understand. Developed from the successful Portuguese textbook Teoria do Turismo, Tourism Theory provides clear and thorough coverage of all aspects of tourism theory for students and researchers of tourism. Consisting of five sections and over fifty entries, this book covers nine of the most important models in tourism study. The first three sections examine general concepts in tourism; disciplines and topics; and the tourist, which includes areas such as demand, gaze, psychology and typologies. A fourth section covers intermediation, distribution and travel, reviewing aspects such as travel agencies, tourist flows and multi-destination travel patterns. The final section encapsulates the tourism destination itself, covering organizations, the destination image, supply, seasonality and more. Encyclopedic cross-referencing between entries makes navigation easy, while in-depth analysis, exercises and further reading suggestions for each of the selected areas provide the context and detail needed for understanding. Entries can be used individually as a reference, or as part of the whole for a complete introduction to tourism theory.

The Study of public administration D. Waldo,

Complexity Roger Lewin,2001 Complexity is the unifying theory of biological and physical phenomena. It holds that at

the root of all complex systems lie a few simple rules, taking the notion of chaos (which states that within seemingly chaotic systems are elements of order) a step further by actually identifying these rules. The author sees it as the dominant scientific trend of the 1990s, as scientists from many disciplines come together and begin to discover the underlying similarities in their fields.

Logistics Handbook James F. Robeson,1994-07-01 The Logistics Handbook encompasses all of the latest advances in warehousing and distribution. It provides invaluable how to problem-solving tools and techniques for all the ever-increasing logistical problems managers face -- making it the most complete and authoritative handbook to date. Special features include: * The most in-depth coverage of a wide range of topics, including information systems, benchmarking, and environmental issues * Contributions found nowhere else from the leading executives, consultants, and academics in the field, such as C. John Langley, James Heskett, and David Anderson * State of the art graphics * Information-packed appendixes of logistics publications and organizations This all-inclusive reference will enable the next generation of managers to thoroughly integrate their logistics operations at all levels -- strategic, structural, functional, and implementation -- into a comprehensive logistics strategy.

Controlling Software Projects Tom DeMarco,1982 Controlling Software Projects shows managers how to organize software projects so they are objectively measurable, and prescribes techniques for making early and accurate projections of time and cost to deliver.

Chaotics Philip Kotler,John A. Caslione,2009-06-11 We have entered into an entirely new era, an age of increasingly frequent and intense periods of turbulence in the global economy. Unlike past recessions, today's crises have precipitated a need for businesses to develop a new mindset, one that takes into account intermittent periods of disturbance, allowing them to thrive while under the constant threat of chaos. Chaotics presents a revolutionary set of guidelines designed to help businesses: • detect sources of turbulence • prepare scenarios • predict resulting vulnerabilities and opportunities • develop responses to ensure long-term resilience and success • avoid risk while advancing the interests of the company • build flexibility into the balance sheet • price strategically • adjust products to meet new customer values • and more. Complete with metrics and measurements, Chaotics outlines a powerful new system for managing waves of uncertainty affecting customers, employees, and other stakeholders. In this climate of increased turbulence, no organization can survive with less.

The Systems View of Life Fritjof Capra,Pier Luigi Luisi,2014-04-10 The first volume to integrate life's biological, cognitive, social, and ecological dimensions into a single, coherent framework.

Damage Control Frank E. Bird,George L. Germain,1966 This book makes a strong case for investigating accidents, not just those cases which produce injuries. The study of accidents instead of injuries does not downgrade the importance of preventing human injury. Rather, it recognizes that many no-injury accidents might have resulted in personal injury, property

damage, or both. If the causes of accidents--whether or not they result in injury--can be ferreted out, if it can be determined what unsafe conditions, or unsafe acts, or any combination was responsible for the accident, there is reason to believe that greater progress in preventing accidents and injuries is possible.

World Development Report 2018 World Bank Group, 2017-10-16 Every year, the World Bank's World Development Report (WDR) features a topic of central importance to global development. The 2018 WDR—LEARNING to Realize Education's Promise—is the first ever devoted entirely to education. And the time is right: education has long been critical to human welfare, but it is even more so in a time of rapid economic and social change. The best way to equip children and youth for the future is to make their learning the center of all efforts to promote education. The 2018 WDR explores four main themes: First, education's promise: education is a powerful instrument for eradicating poverty and promoting shared prosperity, but fulfilling its potential requires better policies—both within and outside the education system. Second, the need to shine a light on learning: despite gains in access to education, recent learning assessments reveal that many young people around the world, especially those who are poor or marginalized, are leaving school unequipped with even the foundational skills they need for life. At the same time, internationally comparable learning assessments show that skills in many middle-income countries lag far behind what those countries aspire to. And too often these shortcomings are hidden—so as a first step to tackling this learning crisis, it is essential to shine a light on it by assessing student learning better. Third, how to make schools work for all learners: research on areas such as brain science, pedagogical innovations, and school management has identified interventions that promote learning by ensuring that learners are prepared, teachers are both skilled and motivated, and other inputs support the teacher-learner relationship. Fourth, how to make systems work for learning: achieving learning throughout an education system requires more than just scaling up effective interventions. Countries must also overcome technical and political barriers by deploying salient metrics for mobilizing actors and tracking progress, building coalitions for learning, and taking an adaptive approach to reform.
