Química cuantitativa Glenn H. Brown, Eugene M. Sallee, 1967 Este texto puede servir para varios cursos diferentes. En un principio, fue escrito para una asignatura de Química cuantitativa dada en dos semestres a la altura del tercer curso de Universidad, suponiéndose que el alumno ha estudiado Química orgánica y está estudiando o ha estudiado ya Química física. Sin embargo, algunas partes escogidas del libro pueden utilizarse como una asignatura breve a la altura del segundo curso

mientras que otras partes podrían estudiarse como asignatura más avanzada de análisis instrumental.

Handbook of Inorganic Compounds Dale L. Perry, 2016-04-19 For anyone that needs property data for compounds, CASRN numbers for computer or other searches, a consistent tabulation of molecular weights to synthesize inorganic materials on a laboratory scale, or information on commercial and other uses for various compounds, this volume is the perfect reference. This second edition is fully revised and updated. New data include optical inorganics, radiation detection inorganics, thermochromic compounds, piezochromic compounds, metal ion coordination complexes, expanded crystallographic and structural data for inorganics, catalysts, superconductors, and luminescent (fluorescent and phosphorescent) inorganics.

Química. Ciencia experimental Chemical Education Material Study, 1987 El programa CHEM centra su problemática en la observación y en la experimentación y destaca la importancia de aprender a observar, dedicando más de treinta páginas a sacar todo el fruto posible de la observación que realizan unos alumnos del proceso de combustión de una vela. Se utilizan las interpretaciones teóricas según conviene, pero se insiste constantemente en que lo más importante es tener en cuenta que los hechos químicos, correspondientes a fenómenos más complicados que los hechos físicos, necesitan que el alumno reciba un adiestramiento especial para que no escapen a su percepción.

Handbook of Chemical Toxicity Profiles of Biological Species Sub Ramamoorthy, E.G. Baddaloo, Sita Ramamoorthy, 1995-09-18 The two volumes comprising this new handbook provide a unique resource for studies involving toxicity profiles in aquatic, avian, and mammalian species. The arrangement of material in alphabetical order by species allows the reader straightforward access to information on the effects of chemicals on various life forms. For each group of species, the acute and chronic (short- and long-term) toxicity data are arranged in descending order, enabling the reader to evaluate the relative toxicity of chemicals for any given species. This arrangement of data also indicates the relative importance of exposure routes. Toxicity profiles include LC50 values, cancer indices, and Virtually Safe Doses (VSDs) and are provided for each organ. In addition, the Handbook provides important comparisons of identical toxicity testing methods and duration of exposure (e.g., LC50/96h) to arrive at a ratio. The ambient concentration and its ratio to the toxic level will assist in selecting the cut-off chemical. This approach helps the reader to maximize the use of resources and to generate data that are specifically relevant to the species and ecosystem under study. The species-specific approach in the Handbook of Chemical Toxicity Profiles of Biological Species makes it a powerful tool for a wide range of studies. It may be used, for example, in evaluating the status of endangered or other species, making impact assessments, developing regulatory controls, and determining important areas for future research.
