**Prof. Dr. J. Mohanraj, Dr. S. Kanda Prasath**

**Decent Work and Economic Growth** Walter Leal Filho, Anabela Marisa Azul, Luciana Brandli, Amanda Lange Salvia, Tony Wall, 2020-10-20 The problems related to the process of industrialisation such as biodiversity depletion, climate change and a worsening of health and living conditions, especially but not only in developing countries, intensify. Therefore, there is an increasing need to search for integrated solutions to make development more sustainable. The United Nations has acknowledged the problem and approved the “2030 Agenda for Sustainable Development”. On 1st January 2016, the 17 Sustainable Development Goals (SDGs) of the Agenda officially came into force. These goals cover the three dimensions of sustainable development: economic growth, social inclusion and environmental protection. The Encyclopedia of the UN Sustainable Development Goals comprehensively addresses the SDGs in an integrated way. The Encyclopedia encompasses 17 volumes, each one devoted to one of the 17 SDGs. This volume addresses SDG 8, namely Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all and contains the description of a range of terms, to allow a better understanding and foster knowledge. The predominant economic model is promoting a lopsided economic growth that is further increasing the gap between the have and the have-nots. This SDG is not just proposing the attainment of more just and empowering economic models, but it also puts at the forefront the well-being of workers by striving to provide employment and better working conditions that respect the dignity of workers. Concretely, the defined targets are: Sustain per capita economic growth in accordance with national circumstances and, in particular, at least 7 per cent gross domestic product growth per annum in the least developed countries Achieve higher levels of economic productivity through diversification, technological upgrading and innovation, including through a focus on high-value added and labour-intensive sectors Promote development-oriented policies that support productive activities, decent job creation, entrepreneurship, creativity and innovation, and encourage the formalization and growth of micro-, small- and medium-sized enterprises, including through access to financial services Improve progressively, through 2030, global resource efficiency in consumption and production and endeavour to decouple economic growth from environmental degradation, in accordance with the 10-Year Framework of Programmes on Sustainable Consumption and Production, with developed countries taking

the lead Achieve full and productive employment and decent work for all women and men, including for young people and persons with disabilities, and equal pay for work of equal value Substantially reduce the proportion of youth not in employment, education or training Take immediate and effective measures to eradicate forced labour, end modern slavery and human trafficking and secure the prohibition and elimination of the worst forms of child labour, including recruitment and use of child soldiers, and end child labour in all its forms Protect labour rights and promote safe and secure working environments for all workers, including migrant workers, in particular women migrants, and those in precarious employment Devise and implement policies to promote sustainable tourism that creates jobs and promotes local culture and products Strengthen the capacity of domestic financial institutions to encourage and expand access to banking, insurance and financial services for all Increase Aid for Trade support for developing countries, in particular least developed countries, including through the Enhanced Integrated Framework for Trade-related Technical Assistance to Least Developed Countries Develop and operationalize a global strategy for youth employment and implement the Global Jobs Pact of the International Labour Organization Editorial Board Rimjhim M Aggarwal, Rosa Maria Fernandez, Edurne A. *how might climate change affect economic growth in developing countries?* Franck Lecocq, Zmarak Shalizi, *The Economic and Fiscal Consequences of Immigration* National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on the Economic and Fiscal Consequences of Immigration, 2017-07-13 The Economic and Fiscal Consequences of Immigration finds that the long-term impact of immigration on the wages and employment of native-born workers overall is very small, and that any negative impacts are most likely to be found for prior immigrants or native-born high school dropouts. First-generation immigrants are more costly to governments than are the native-born, but the second generation are among the strongest fiscal and economic contributors in the U.S. This report concludes that immigration has an overall positive impact on long-run economic growth in the U.S. More than 40 million people living in the United States were born in other countries, and almost an equal number have at least one foreign-born parent. Together, the first generation (foreign-born) and second generation (children of the foreign-born) comprise almost one in four Americans. It comes as little surprise, then, that many U.S. residents view immigration as a major policy issue facing the nation. Not only does immigration affect the environment in which everyone lives, learns, and works, but it also interacts with nearly every policy area of concern, from jobs and the economy, education, and health care, to federal, state, and local government budgets. The changing patterns of immigration and the evolving consequences for American society, institutions, and the economy continue to fuel public policy debate that plays out at the national, state, and local levels. The Economic and Fiscal Consequences of Immigration assesses the impact of dynamic immigration processes on economic and fiscal outcomes for the United States, a major destination of world

population movements. This report will be a fundamental resource for policy makers and law makers at the federal, state, and local levels but extends to the general public, nongovernmental organizations, the business community, educational institutions, and the research community.

**The Future of the World Economy** Wilhelm Krelle, 2013-03-09 Economic growth and structural change - the future of the world economy - is analysed in this book. Conditional forecasts are given for the economic development of the most important world market countries till the year 2000. The driving forces of economic growth are identified and forecasted, in connection with collaborating scholars in most of these countries and with international organizations. This information is used in solving a coherent world model. The model consists of linked growth models for each country (or groups of countries). The solutions show that the inequality in international income distribution will further increase and that the CMEA and OECD countries will approximately keep their relative positions, with some changes within these groups. Structural change is also analysed. Additionally separate forecasts prepared by each collaborating country group are given and may be compared with the forecasts by the world model. The book closes with chapters on special features of the future economic development: on the international debt problem, on long waves, on structural change in the world trade, on the emergence of service economics and on the comparison of GDP and NMP national accounting.

*Economic Growth and Sustainable Development* Peter N. Hess, 2013-04-26 Economic growth, reflected in increases in national output per capita, makes possible an improved material standard of living. Sustainable development, popularly and concisely defined as 'meeting the needs of the present generations without compromising the ability of future generations to meet their needs,' directly addresses the utilization of natural resources, the state of the environment, and intergenerational equity. Fundamental questions addressed in this textbook include: What causes economic growth? Why do some countries grow faster than others? What accounts for the extraordinary growth in the world's population over the past two centuries? What are the current trends in population and will these trends continue? Are there limits to economic growth and population growth due to resource constraints and environmental thresholds? Is sustainable development compatible with economic growth? Can sustainable development be attained without addressing the extreme poverty that afflicts over a billion of the world's population? This interdisciplinary textbook uses a blend of formal models, empirical evidence, history and policy to provide a coherent and comprehensive treatment of economic growth and sustainable development.

**Renewable Energy Sources and Climate Change Mitigation** Ottmar Edenhofer,Ramón Pichs-Madruga,Youba Sokona,Kristin Seyboth,Susanne Kadner,Timm Zwickel,Patrick Eickemeier,Gerrit Hansen,Steffen Schlömer,Christoph von Stechow,Patrick Matschoss,2011-11-21 This Intergovernmental Panel on Climate Change Special Report (IPCC-SRREN) assesses the potential role of renewable energy in the mitigation of climate change. It covers the six most important renewable energy sources - bioenergy, solar, geothermal, hydropower, ocean and wind energy - as well as their integration into present and future energy systems. It considers the environmental and social consequences associated with the deployment of these technologies and presents strategies to overcome technical as well as non-technical obstacles to their application and diffusion. SRREN brings a broad spectrum of technology-specific experts together with scientists studying energy systems as a whole. Prepared following strict IPCC procedures, it presents an impartial assessment of the current state of knowledge: it is policy relevant but not policy prescriptive. SRREN is an invaluable assessment of the potential role of renewable energy for the mitigation of climate change for policymakers, the private sector and academic researchers.

*China's WTO Accession Reassessed* Wang Luolin,2015-02-20 China's accession to the World Trade Organisation in 2001 was a highly significant event both for China and for the wider world. This book argues that, although at the time some

people doubted the likely benefits, China's WTO accession has been highly successful. It discusses how China has abided by its commitment to WTO terms and how WTO membership has contributed to China's reform and opening up; explores how vastly increased co-operative exchange with many countries around the world has been mutually beneficial in a range of fields including trade, science and culture; and shows how China's WTO membership has been a great stimulus both for China's economy and the world economy. The book considers the subject from a number of perspectives, and draws out lessons for future reform and development for China, and for China's relations with the rest of the world, emphasising the need to maintain a win-win approach.

Responsible Industry 4.0 David Mhlanga, 2023-11-10 The growth of digital technologies and Artificial Intelligence (AI) has the potential to increase global wealth and tackle some of the world's most serious problems, including economic marginalization. In contrast, these innovations may contribute to widening economic gaps and potentially threaten the stability of democratic governments. Changes in economic growth and distribution are occurring in both developed and developing countries due to the impact that new technologies are having on businesses and the workplace. This book provides answers to the question of whether the technologies of the Fourth Industrial Revolution, such as AI, will lead to greater economic uncertainty, environmental collapse, and social unrest or whether they will help achieve shared prosperity and sustainable development, and successively the Sustainable Development Goals (SDGs). This book focuses on Human-centred AI and the responsible deployment of diverse technologies for achieving sustainable development. It examines why the human-centred approach is so crucial to long-term success. It underlines the definition of human-centred AI and its importance in creating sustainability and resilience. This book begins with a comprehensive history of the Fourth Industrial Revolution, details how to produce AI that is centred on humans in order to accomplish sustainable development in the era of the Fourth Industrial Revolution, and then goes on to discuss the need for proper management and governance of emerging technologies. The book ends by presenting a framework that will assist stakeholders in employing AI in a human-centred manner to achieve the SDGs set for 2030. This book will appeal to scholars, academics, and researchers interested in information linked to the SDGs, AI, and Industry 4.0.
