Phase Transformations and Heat Treatments of Steels Bankim Chandra Ray, Rajesh Kumar Prusty, Deepak Nayak, 2020-06-01 The perpetual flow of understanding between phase transformation that controls grain/microstructures and heat treatment which decides the size of grains/microstructures of steels is not well articulated in the perspective of undergraduate students. In *Phase Transformations and Heat Treatments of Steels*, theories of phase transformation have been used to obtain a desirable phase or combination of phases by performing appropriate heat treatment operations, leading to unification of both the concepts. Further, it includes special and critical heat treatment practices, case studies, local and in-service heat treatments, curative and preventive measures of heat treatment defects for several common and high-performance applications. Features: Presents fundamentals of phase transformation in steels Analyzes basics of phase transformation due to heat treatment of steel under various environmental conditions Explains application of heat treatment for different structural components Discusses heat treatment defects and detection Emphasizes heat treatment of special steels and in-situ heat treatment practices

Reading Images for Knowledge Building J.R. Martin, Len Unsworth, 2023-08-07 This innovative volume provides a new analytic framework for understanding how meaning-making resources are deployed in images designed for knowledge building in school science. The framework enables analyses of science images from the perspectives of both their complexity and recognizability. Complexity deals with the technical and abstract knowledge of school science (technicality), evaluative dispositions in relation to that knowledge (iconization) and the condensation of the technical and dispositional meanings as 'synoptic eye-fuls' in discipline-specific infographics (aggregation). Recognizability concerns the relationship between the appearance of phenomena in reality and the reconfiguration of this reality in images (congruence), the perceptibility or discernibility of the features and contexts of phenomena in images (explicitness), and how images engage their viewers (affiliation). The framework is illustrated by more than 100 images in colour in the e-book and black and white in the paper

version and will inform research into multimodal literacy pedagogy that incorporates an understanding of the role of images in the teaching and learning of school science. This book will be of particular interest to scholars in multimodality, semiotics, literacy education and science education.
