Pressure Ulcer Risk Assessment and Prevention: Comparative Effectiveness U. S. Department of Health and Human Services, Agency for Healthcare Research and Quality, 2013-06-29 Pressure ulcers are defined by the National Pressure Ulcer Advisory Panel (NPUAP) as “localized injury to the skin and/or underlying tissue usually over a bony prominence, as a result of pressure, or pressure in combination with shear and/or friction.” A number of risk factors are associated with increased risk of pressure ulcer development, including older age, black race, lower body weight, physical or cognitive impairment, poor nutritional status, incontinence, and specific medical comorbidities that affect circulation such as diabetes or peripheral vascular disease. Pressure ulcers are often associated with pain and can contribute to decreased function or lead to complications such as infection. In some cases, pressure ulcers may be difficult to successfully treat despite surgical and other invasive treatments. In the inpatient setting, pressure ulcers are associated with increased length of hospitalization and delayed return to function. In addition, the presence of pressure ulcers is associated with poorer general prognosis and may contribute to mortality risk. Recommended prevention strategies for pressure ulcers generally involve use of risk assessment tools to identify people at higher risk for developing ulcers in conjunction with interventions for preventing ulcers. A variety of diverse interventions are available for the prevention of pressure ulcers. Categories of preventive interventions include support surfaces (including mattresses, integrated bed systems, overlays, and cushions), repositioning, skin care (including lotions, dressings, and management of incontinence), and nutritional support. Each of these broad categories encompasses a variety of interventions. The purpose of this report is to review the comparative clinical utility and diagnostic accuracy of risk-assessment instruments for evaluating risk of pressure ulcers and to evaluate the benefits and harms of preventive interventions for pressure ulcers in different settings and patient populations. The following Key Questions are the focus of this report: KQ1. For adults in various settings, is the use of any risk-assessment tool effective in reducing the incidence or severity of pressure ulcers compared with other risk-assessment tools, clinical judgment alone, and/or usual care? KQ1a. Do the effectiveness and comparative effectiveness of risk-assessment tools differ according to setting? KeQ1b. Do the effectiveness and comparative effectiveness of risk-assessment tools differ according to patient characteristics and other

known risk factors for pressure ulcers, such as nutritional status or incontinence? KQ2. How do various risk-assessment tools compare with one another in their ability to predict the incidence of pressure ulcers? KQ2a. Does the predictive validity of various risk-assessment tools differ according to setting? KQ2b. Does the predictive validity of various risk-assessment tools differ according to patient characteristics? KQ3. In patients at increased risk of developing pressure ulcers, what are the effectiveness and comparative effectiveness of preventive interventions in reducing the incidence or severity of pressure ulcers? KQ3a. Do the effectiveness and comparative effectiveness of preventive interventions differ according to risk level as determined by different risk-assessment methods and/or by particular risk factors? KQ3b. Do the effectiveness and comparative effectiveness of preventive interventions differ according to setting? KQ3c. Do the effectiveness and comparative effectiveness of preventive interventions differ according to patient characteristics? KQ4. What are the harms of interventions for the prevention of pressure ulcers? KQ4a. Do the harms of preventive interventions differ according to the type of intervention? KQ4b. Do the harms of preventive interventions differ according to setting? KQ4c. Do the harms of preventive interventions differ according to patient characteristics?

Global Guidelines for the Prevention of Surgical Site Infection World Health Organization, 2017-01-27 Surgical site infections are caused by bacteria that get in through incisions made during surgery. They threaten the lives of millions of patients each year and contribute to the spread of antibiotic resistance. In low- and middle-income countries, 11% of patients who undergo surgery are infected in the process. In Africa, up to 20% of women who have a caesarean section contract a wound infection, compromising their own health and their ability to care for their babies. But surgical site infections are not just a problem for poor countries. In the United States, they contribute to patients spending more than 400 000 extra days in hospital at a cost of an additional US \$10 billion per year. No international evidence-based guidelines had previously been available before WHO launched its global guidelines on the prevention of surgical site infection on 3 November 2016, and there are inconsistencies in the interpretation of evidence and recommendations in existing national guidelines. These new WHO guidelines are valid for any country and suitable to local adaptations, and take account of the strength of available scientific evidence, the cost and resource implications, and patient values and preferences.

Infusion Nursing Infusion Nurses Society, Mary Alexander, Ann Corrigan, Lisa Gorski, Judy Hankins, Roxanne Perucca, 2009-05-08 With a new focus on evidence-based practice, the 3rd edition of this authoritative reference covers every aspect of infusion therapy and can be applied to any clinical setting. Caring for People who Sniff Petrol Or Other Volatile Substances National Health and Medical Research Council (Australia), 2011 These guidelines provide recommendations that outline the critical aspects of infection prevention and control. The recommendations were developed using the best available evidence and consensus methods by the Infection Control Steering Committee. They have been prioritised as key areas to prevent and control infection in a healthcare facility. It is recognised that the level of risk may differ according to the different types of facility and therefore some recommendations should be justified by risk assessment. When implementing these recommendations all healthcare facilities

need to consider the risk of transmission of infection and implement according to their specific setting and circumstances.

Skills in Clinical Nursing Audrey Berman, Shirlee Snyder, 2012 Skills in Clinical Nursing, Seventh Edition brings together the 166 most important skills performed by nurses, including all common variations, organized from the simplest to the most complex. This edition has been revised, restructured, and updated to reflect current practice, responding to extensive feedback from clinical nurses, market surveys, and the authors' own teaching and practice experience. Each chapter contains concise introductory material, placing skills in the context of anatomy, physiology, and pathophysiology, and clearly explaining their purpose and rationale. Each skill is then presented in exceptional step-by-step detail, with 800+ illustrations. Skills coverage is complemented by critical-thinking insights on using assessment data, and essential guidance on appropriate delegation to unlicensed assistive personnel (UAP).

New Cytokines As Potential Drugs Satwant K. Narula, Robert Coffman, 2000-02-14 Over the past ten years, a number of cytokines and growth factors have proven to be as effective therapeutics. While these products have certainly established recombinant biologics as a major pharmaceutical growth sector, the continued interest in this class of drugs arises from the fact that today we have a far better understanding of the human immune response, both at a cellular and molecular level. This has resulted in a more methodical characterisation of these factors which has given clinical researchers an opportunity to plan Phase 1 clinical trials that can provide substantial information on the activity of the cytokine in humans. Currently, a great deal of effort is also being channelled into identifying cytokines from the various DNA databases. Our major objective for this book is to profile cytokines that have been recently identified. The therapeutic potential of these cytokines based on their known properties will be discussed by the authors. The main aim of this book is to provide...

Dermatology of Black Skin André Basset, Bernard Liautaud, Bassirou Ndiaye, 1986 This pocket atlas is intended for all medical and paramedical staff who care for black patients. It describes the clinical signs of skin diseases in black patients, which are significantly different from the classic text-book descriptions based on white patients. More than 200 superb color photographs with clear, concise legends pointing out the key points of each, make this guide an easily accessible aid to diagnosis and prevention. One chapter is devoted to symptoms in black skin, comparing its histological appearance with that

of white skin. The pathological chapters cover a large number of dermatological conditions, including eczema, impetigo, lichen planus, psoriasis and also skin abnormalities in viral infections (e.g. measles) and systemic disorders (e.g. collagen diseases, sarcoidosis). A large section is devoted to leprosy and its lesions, benign and malignant skin tumours, and Kaposi's sarcoma.

Operating Within the Law Bruce Campbell, Ken Callum, Nick A. Peacock, Nicholas A. Peacock, 2001 The primary aim of this book is to provide clear and concise explanations about all aspects of the medico-legal process for surgeons, other doctors and lawyers. A wide range of topics is covered including: how the medico-legal arena is changing; the legal principles involved; how to avoid medico-legal problems; resolving complaints out of court; the surgeon as defendant; the surgeon as expert; the GMC and the Coroner.

Chinese Acupuncture Georges Soulié de Morant, 1994 Soulie de Morant's masterpiece is the most detailed study of acupuncture available in a Western language. It was nominated for a Nobel prize and provided the foundation for French acupuncture. This text is divided into 5 parts: the energetics of acupuncture, the application of the energetics, physiology, meridians and points, and treatment. This book is a unique historical document, but more than this, it is the most practical of texts and has already served a generation of clinicians well.

Hematopoietic Stem Cell Transplantation Susan Ezzone, 2013 Since the publication of the first edition of this book in 2004, the specialty of hematopoietic stem cell transplantation (HSCT) has continued to progress as a treatment option for many diseases. Indications for the use of autologous, syngeneic, and allogeneic transplantation continue to expand. The second edition of *Hematopoietic Stem Cell Transplantation: A Manual for Nursing Practice* presents the most up-to-date information regarding the use of HSCT. Chapter topics include an overview of hematopoiesis and immunology, basic concepts of transplantation, stem cell collection, course of transplant treatment and acute complications, acute and chronic graft-versus-host disease, various complications from gastrointestinal to neurologic, relapse, long-term care and survivorship, ethics, and much more.

The Epic of Mount Everest Sir Francis Younghusband, 2019-11-01 The Epic of Mount Everest, first published in 1926, is the exciting story of the first attempts to reach the summit of Mount Everest, including that of George Mallory and Andrew Irvine, who disappeared and died in the 1924 expedition. Considered “must reading” for mountaineers, The Epic of Mount Everest provides a fascinating insight into the men, methods, and struggles of early mountain-climbers. Included are 15 pages of illustrations and 2 maps.

Intracorporeal Anastomosis Barry Salky, 2020-12-21 Laparoscopic and robotic approaches to colon, rectum and the small intestine have undergone radical change since the introduction of minimally invasive surgical techniques. At the beginning of this revolution, the most common anastomotic techniques have been extracorporeal. As a few surgeons became more familiar with minimally invasive suturing techniques, intracorporeal anastomosis became possible. However, the change from an extracorporeal approach has been slow to realization for the vast majority of surgeons. While there are multiple reasons for this slow adoption, the most common are perceived difficulty with suturing in a closed space, the feeling of lack of control, and the worry of increased infection in the abdomen. This book details the latest information in addressing and dispelling these fears. It provides a useful guide to techniques required to perform intracorporeal anastomoses both in laparoscopic and robotic surgery, and it shows the huge advantages to the patient, surgeon and to our health care system. Written by experts in the field, chapters serve as a definitive guide to the performance of intracorporeal techniques to all general and colon and rectal surgeons performing bowel resection both for benign and malignant disease. The chapters contain ample color photographs and videos describing each technique. Intracorporeal Anastomosis primarily focuses on laparoscopic and robotic techniques and contains the latest published data describing the advantages of using these minimally invasive surgical techniques.
