Learning and Cognition Vibeke Grøver Aukrust, 2011-02-17 This collection of 58 articles from the recently-published third edition of the INTERNATIONAL ENCYCLOPEDIA OF EDUCATION focus on learning, memory, attention, problem solving, concept formation, and language. Learning and cognition is the foundation of cognitive psychology and encompasses many topics including attention, memory, categorization, etc. Most books in the area either focus on one subtopic in-depth (e.g. an entire book on memory) or cover the gamut of subjects in a series of long, technical handbook-like chapters. This concise reference offers researchers and professors teaching in the area a new take on the material that is comprehensive in breadth, but lighter in depth - focusing on main findings, established facts, and minimizing the amount of space taken up by large, multi-volume references. An introduction to a complex field via summaries of main topics in this discipline Contains contributions from the foremost international researchers in the field Makes content available to individual cognitive psychology researchers

Neuropalliative Care Claire J. Creutzfeldt, Benzi M. Kluger, Robert G. Holloway, 2018-10-01 This comprehensive guide thoroughly covers all aspects of neuropalliative care, from symptom-specific considerations, to improving communication between clinicians, patients and families. *Neuropalliative Care: A Guide to Improving the Lives of Patients and Families Affected by Neurologic Disease* addresses clinical considerations for diseases such as dementia, multiple sclerosis, and severe acute brain injury, as well discussing the other challenges facing palliative care patients that are not currently sufficiently met under current models of care. This includes methods of effective communication, supporting the caregiver, how to make difficult treatment decisions in the face of uncertainty, managing grief, guilt and anger, and treating the pain itself. Written by leaders in the field of neuropalliative care, this book is an exceptional, well-rounded resource of neuropalliative care, serving as a reference for all clinicians caring for patients with neurological disease and their families: neurologists and palliative care specialists, physicians, nurses, chaplains, social workers, as well as trainees in these areas.

Becoming Fluent Richard Roberts, Roger Kreuz, 2017-02-03 Forget everything you've heard about adult language learning—evidence from cognitive science and psychology prove we can learn foreign languages just as easily as children! An eye-opening study on how adult learners can master a foreign language by drawing on skills and knowledge honed over a lifetime. Adults who want to learn a foreign language are often discouraged because they believe they cannot acquire a language as easily as children. Once they begin to learn a language, adults may be further discouraged when they find the methods used to teach children don't seem to work for them. What is an adult language learner to do? In this book, Richard Roberts and Roger Kreuz draw on insights from psychology and cognitive science to show that adults can master a foreign language if they bring to bear the skills and knowledge they have honed over a lifetime. Adults shouldn't try to learn as children do; they should learn like adults. Roberts and Kreuz report evidence that adults can learn new languages even more easily than children. Children appear to have only two advantages over adults in learning a language: they acquire a native accent more easily, and they do not suffer from self-defeating anxiety about learning a language. Adults, on the other hand, have the greater advantages—gained from experience—of an understanding of their own mental processes and knowing how to use language to do things. Adults have an especially advantageous grasp of pragmatics, the social use of language, and Roberts and Kreuz show how to leverage this metalinguistic ability in learning a new language. Learning a language takes effort. But if adult learners apply the tools acquired over a lifetime, it can be enjoyable and rewarding.

Improving Diagnosis in Health Care National Academies of Sciences, Engineering, and Medicine,Institute of Medicine,Board on Health Care Services,Committee on Diagnostic Error in Health Care,2015-12-29 Getting the right

diagnosis is a key aspect of health care - it provides an explanation of a patient's health problem and informs subsequent health care decisions. The diagnostic process is a complex, collaborative activity that involves clinical reasoning and information gathering to determine a patient's health problem. According to *Improving Diagnosis in Health Care*, diagnostic errors-inaccurate or delayed diagnoses-persist throughout all settings of care and continue to harm an unacceptable number of patients. It is likely that most people will experience at least one diagnostic error in their lifetime, sometimes with devastating consequences. Diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in psychological or financial repercussions. The committee concluded that improving the diagnostic process is not only possible, but also represents a moral, professional, and public health imperative. *Improving Diagnosis in Health Care*, a continuation of the landmark Institute of Medicine reports *To Err Is Human* (2000) and *Crossing the Quality Chasm* (2001), finds that diagnosis-and, in particular, the occurrence of diagnostic errors—has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will require collaboration and a widespread commitment to change among health care professionals, health care organizations, patients and their families, researchers, and policy makers. The recommendations of *Improving Diagnosis in Health Care* contribute to the growing momentum for change in this crucial area of health care quality and safety.

A Tattoo on my Brain Daniel Gibbs, Teresa H. Barker, 2023-03-16 Dr Daniel Gibbs is one of 50 million people worldwide with an Alzheimer's disease diagnosis. Unlike most patients with Alzheimer's, however, Dr Gibbs worked as a neurologist for twenty-five years, caring for patients with the very disease now affecting him. Also unusual is that Dr Gibbs had begun to suspect he had Alzheimer's several years before any official diagnosis could be made. Forewarned by genetic testing showing he carried alleles that increased the risk of developing the disease, he noticed symptoms of mild cognitive impairment long before any tests would have alerted him. In this highly personal account, Dr Gibbs documents the effect his diagnosis has had on his life and explains his advocacy for improving early recognition of Alzheimer's. Weaving clinical knowledge from decades caring for dementia patients with his personal experience of the disease, this is an optimistic tale of one man's journey with early-stage Alzheimer's disease. Soon to be a documentary film on MTV/Paramount +.
