## Lino Guzzella, Antonio Sciarretta

Reinforcement Learning, second edition Richard S. Sutton, Andrew G. Barto, 2018-11-13 The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

**Vehicle Propulsion Systems** Lino Guzzella, Antonio Sciarretta, 2007-09-21 The authors of this text have written a comprehensive introduction to the modeling and optimization problems encountered when designing new propulsion systems for passenger cars. It is intended for persons interested in the analysis and optimization of vehicle propulsion systems. Its focus is on the control-oriented mathematical description of the physical processes and on the model-based optimization of the system structure and of the supervisory control algorithms.

**Fundamentals of the Physical Theory of Diffraction** Pyotr Ya. Ufimtsev, 2007-02-09 This book is the first complete and comprehensive description of the modern Physical Theory of Diffraction (PTD) based on the concept of elementary edge waves (EEWs). The theory is demonstrated with the example of the diffraction of acoustic and electromagnetic waves at

perfectly reflecting objects. The derived analytic expressions clearly explain the physical structure of the scattered field and describe in detail all of the reflected and diffracted rays and beams, as well as the fields in the vicinity of caustics and foci. Shadow radiation, a new fundamental component of the field, is introduced and proven to contain half of the total scattered power.

**Algorithms for Reinforcement Learning** Csaba Grossi,2022-05-31 Reinforcement learning is a learning paradigm concerned with learning to control a system so as to maximize a numerical performance measure that expresses a long-term objective. What distinguishes reinforcement learning from supervised learning is that only partial feedback is given to the learner about the learner's predictions. Further, the predictions may have long term effects through influencing the future state of the controlled system. Thus, time plays a special role. The goal in reinforcement learning is to develop efficient learning algorithms, as well as to understand the algorithms' merits and limitations. Reinforcement learning is of great interest because of the large number of practical applications that it can be used to address, ranging from problems in artificial intelligence to operations research or control engineering. In this book, we focus on those algorithms of reinforcement learning that build on the powerful theory of dynamic programming. We give a fairly comprehensive catalog of learning problems, describe the core ideas, note a large number of state of the art algorithms, followed by the discussion of

their theoretical properties and limitations. Table of Contents: Markov Decision Processes / Value Prediction Problems / Control / For Further Exploration

**Operational Experiences with Flexible Transit Services** David Koffman, Transit Cooperative Research Program, 2004 TRB's Transit Cooperative Research Program (TCRP) Synthesis 53: Operational Experiences with Flexible Transit Services examines transit agency experiences with flexible transit services, including all types of hybrid services that are not pure demand-responsive (including dial-a-ride and Americans with Disabilities Act paratransit) or fixed-route services, but that fall somewhere in between those traditional service models.

*Intelligent Computing Techniques for Smart Energy Systems* Akhtar Kalam, Khaleequr Rehman Niazi, Amit Soni, Shahbaz Ahmed Siddiqui, Ankit Mundra, 2019-12-16 The book compiles the research works related to smart solutions concept in context to smart energy systems, maintaining electrical grid discipline and resiliency, computational collective intelligence consisted of interaction between smart devices, smart environments and smart interactions, as well as information technology support for such areas. It includes high-quality papers presented in the International Conference on Intelligent Computing Techniques for Smart Energy Systems organized by Manipal University Jaipur. This book will motivate scholars to work in these areas. The book also prophesies their approach to be used for the business and the humanitarian technology development as research proposal to various government organizations for funding approval.

Seismic Wave Propagation in Stratified Media Brian Kennett, 2009-05-01 Seismic Wave Propagation in Stratified Media presents a systematic treatment of the interaction of seismic waves with Earth structure. The theoretical development is physically based and is closely tied to the nature of the seismograms observed across a wide range of distance scales - from a few kilometres as in shallow reflection work for geophysical prospecting, to many thousands of kilometres for major earthquakes. A unified framework is presented for all classes of seismic phenomena, for both body waves and surface waves. Since its first publication in 1983 this book has been an important resource for understanding the way in which seismic waves can be understood in terms of reflection and transmission properties of Earth models, and how complete theoretical seismograms can be calculated. The methods allow the development of specific approximations that allow concentration on different seismic arrivals and hence provide a direct tie to seismic observations.

Pharmacological Activity-based Quality Control of Chinese Herbs, 2008 Natural products are the most successful source of drugs. Of the 877 small-molecule new chemical entities introduced between 1981 and 2002, roughly half were natural products, semi-synthetic natural product analogues or natural mimics. Chinese herbs (traditional Chinese medicines, TCMs) have been used for prevention and treatment of diseases for thousands years. It has been attracting intensive attention in the trends of back to nature. As herbal medicines, the conditions of growth, harvest time, process and storage etc. will undoubtedly affect the presence and concentration of the bioactive constituents, thus affecting their quality and efficacy. Up

to date, there are few books focussing on the relationship, which is the bridge between TCM and modern medical science, of traditional clinic uses, pharmacological activities and quality control of Chinese herbs. Unfortunately, bioactive compounds in Chinese herbs are usually not or only partially known. Actually, the active compounds considered in Chinese herbs may be different according to their clinical indication. In addition, it is considered that the curative effect of Chinese herbs is an integrative result of a number of bioactive compounds. Therefore, how to control the quality is a big problem. We would like to discuss the quality control based on their traditional clinical uses and pharmacological activities in this book, which is the fundamental step towards developing and modernising such products into evidence based medicines. It will also help the peoples to understand TCMs in modern scientific angles. This book is designed primarily as a textbook for or adjunct to course in herbal remedies, food safety or quality control of herbs. It is also a professional reference whom is in the area of drug discovery, pharmaceutical analysis and food chemistry.

Integrated and Participatory Water Resources Management - Theory Rodolfo Soncini-Sessa, Enrico Weber, Andrea Castelletti, 2007-10-16 Covering the more recent advances in Modelling, Planning, Management and Negotiations for Integrated Water Resource Management, this text brings together knowledge and concepts from Hydrology, System Analysis, Control Theory, Conflict Resolution, and Decision and Negotiation Theory. Without compromising on mathematical rigour, the book maintains a fine line between theory and application, methodology and tools, avoiding getting locked into excessively theoretical and formal development of the issues discussed. The non-technical aspects of water resource systems (such as societal, political and legal concerns) are recognized throughout the book as having a great, if not fundamental, importance to reaching an agreed-upon decision; they are therefore integrated into the more technical and mathematical issues. The book provides a unified, coordinated and comprehensive framework that will facilitate the increasingly appropriate application of the Integrated Water Resource Management paradigm by current and future practising professionals, decision-makers and scientists. · Integration of technical modelling and control aspects with participatory and decision-making issues · Insightful and comprehensive treatment of theoretical contents, supported by practical examples · A wide collection of exercises and project examples based on real-world case studies (with complete solutions)
