Levels of Cognitive Complexity Ernest McDaniel,Chris Lawrence,2012-12-06 This research monograph describes a new approach to the measurement of thinking processes. The author begins with a discussion of the logic of thought versus the psychology of thinking. Traditionally, thinking has been defined in terms of the logical thought processes which lead to warranted conclusions. The psychological processes, on the other hand, involve the individual's perceptions, intentions and information-processing strategies. Traditional logical approaches appear to be most suitable for analysis of thinking in formal highly structured problem situations. Current tests of critical thinking reflect the logical approaches to measuring thinking;

two tests of this type are evaluated by the author. The authors define the information-processing approach to measurement of thinking, which emphasizes the way situational information is perceived, selected, organized and interpreted. Using this approach, the authors have developed two interpretive exercises, *The Holocaust and The Bomb Factories*. The results of a number of studies conducted with these exercises are presented, and future work is projected.

**The Teaching of Thinking** R. S. Nickerson, D. N. Perkins, E. E. Smith, 2014-01-09 First published in 1985. This book was created due to involvement of the authors to develop a course to enhance thinking skills. A main aim of which was to determine what is known about the teaching of thinking from current research literature and from the results of efforts to develop cognitive enhancement programs. The primary focus is on intentional, purposeful, goal-oriented thinking—thinking, if you will, for the express purpose of realizing some specific objective.

**How to Evaluate the Effectiveness of a School-Based Intervention** Ourania Maria Ventista, 2021-10-21 *How to Evaluate the Effectiveness of a School-Based Intervention* presents a multi-dimensional evaluation framework, which is not only based on measurable outcomes. **Critical Thinking** Jonathan Haber, 2020-04-07 An insightful guide to the practice, teaching, and history of critical thinking—from Aristotle and Plato to Thomas Dewey—for teachers, students, and anyone looking to hone their critical thinking skills. Critical thinking is regularly cited as an essential 21st century skill, the key to success in school and work. Given the propensity to believe fake news, draw incorrect conclusions, and make decisions based on emotion rather than reason, it might even be said that critical thinking is vital to the survival of a democratic society. But what, exactly, is critical thinking? Jonathan Haber explains how the concept of critical thinking emerged, how it has been defined, and how critical thinking skills can be taught and assessed. Haber describes the term's origins in such disciplines as philosophy, psychology, and science. He examines the components of critical thinking, including • structured thinking • language skills • background knowledge • information literacy • intellectual humility • empathy and open-mindedness Haber argues that the most important critical thinking issue today is that not enough people are doing enough of it. Fortunately, critical thinking can be taught, practiced, and evaluated. This book offers a guide for teachers, students, and aspiring critical thinkers everywhere, including advice for educational leaders and policy makers on how to make the teaching and learning of critical thinking an educational priority and practical reality.

**Teaching and Measuring Cognitive Readiness** Harold F. O'Neil, Ray S. Perez, Eva L. Baker, 2013-07-18 Teaching and Measuring Cognitive Readiness presents theoretical and empirical findings regarding cognitive readiness and assessments of their impact on adult learning. The term readiness is used in assessing student preparation for K-12 schools, while in the military and in industry, readiness denotes preparation to be effective in performing a mission or a job. Cognitive Readiness is viewed through a Knowledge, Skills, and Attributes (KSA) lens. Teaching and Measuring Cognitive Readiness deals with (a) the primacy of cognitive readiness as attributes or individual difference variables; (b) the need for cognitive readiness instructional and assessment strategies; (c) the need to integrate assessment into cognitive readiness training; (d) the need for theory-driven evaluation studies to increase knowledge and efficacy in teaching cognitive readiness; and (e) the need for a solid psychometric approach to the use of cognitive readiness assessments.

**Media Education Assessment Handbook** William G. Christ, 2020-07-24 Assessing media education is a formidable task because both assessment and media education are complex and controversial concepts. Assessment, which can take place at the individual student, class, sequence, program, department or unit, and university levels, is questioned in terms of

reliability, validity, relevance, and cost. Media education, which has been challenged at a number of schools, finds faculty and administrators in the midst of soul-searching about how to clearly articulate its missions and purposes to a broader audience. Departments are under increasing national, state, and institutional pressure to get assessment procedures carried out quickly, but there is an obvious danger in rushing to implement assessment strategies before establishing what is essential in media education. In communication education in general, the what of assessment is often discussed in terms of skills, attitudes, affect, values, and knowledge. People assess students to determine what they know, think, feel, value, and can do. Here it is suggested that one of the places to start defining what students should learn from their media education is by identifying outcomes. Outcomes can be assessed in a variety of ways, but first they need to be developed and clearly articulated.
