Las bases neurobiológicas del trastorno límite de la personalidad Diego E. Cohen, 2020-08-01 El trastorno límite de la personalidad es una condición psicopatológica bien caracterizada, conocida y formalizada desde hace más de 80 años. Se trata de un trastorno con diferentes niveles de gravedad, sin embargo en la práctica clínica se presentan los pacientes más severos, los cuales por lo general presentan intentos de suicidio recurrentes algunos de ellos consumados, múltiples conductas impulsivas, relaciones interpersonales inestables y caóticas, depresión, inestabilidad afectiva y frecuente coocurrencia con otros trastornos psiquiátricos. Los pacientes TLP suelen padecer también múltiples enfermedades médicas relacionadas con las dificultades de cuidar la propia salud. Todos estos factores contribuyen al alto grado de utilización de servicios médicos y gastos cuantiosos en salud pública. Este volumen tiene la modesta finalidad de presentar un modelo teórico-clínico que considera al trastorno límite como el resultado final y dinámico de la interacción de múltiples niveles de análisis desde el genético-molecular al nivel psicosocial (interacción gen-ambiente). El objetivo principal es comenzar a ayudar al lector a considerar una visión contemporánea de esta severa patología en concordancia con las investigaciones contemporáneas del diagnóstico en psiquiatría basadas en parte en el modelo del proyecto Research domain criteria (RDoC) propuesto por el instituto de salud de los Estados Unidos (NIMH) que intenta investigar endofenotipos y procesos neurobiológicos que faciliten el diagnóstico y el tratamiento. La psicopatología TLP es abordada desde el nivel genético, la neuroanatomía funcional y la posible respuesta farmacológica. Se aborda un paradigma muy actual en la consideración de la patología del trastorno límite: el procesamiento mental basado en el paradigma de la teoría de la mente como una forma profunda de considerar los procesos de autoconciencia, capacidad de reflexión y empatía, algunas de estas capacidades profundamente disfuncionales en algunos pacientes borderline.

Táctica del fútbol: teoría y entrenamiento Milton Rivas Borbón, Oscar, Sánchez Alvarado, Erick, 2017-11-30 Un entrenamiento táctico secuencial y sustentado en el modelo de juego que quiere implementar el entrenador y en las necesidades tácticas del equipo y los jugadores, producirá indudablemente en los futbolistas un incremento cuantitativo y cualitativo en su repertorio táctico y redundará en un mejoramiento sustancial de su rendimiento táctico que se verá

reflejado en la competición. Esta obra se presenta, de forma didáctica, un análisis teórico de la táctica en general; de la caracterización del perfil deportivo de los diferentes puestos en el fútbol, específicamente en la áreas física, técnica, psicológica y táctica, así como algunas actividades específicas de entrenamiento; además hace un estudio de los conceptos tácticos colectivos, ofensivos y defensivos, para lo cual se proponen diversas actividades de entrenamiento, y plantea una caracterización de los sistemas de juego más utilizados en la actualidad y ejercicios de entrenamiento para su adquisición, táctica fija ofensiva y defensiva.

Actas de Las VIII Jornadas de Concurrencia Diego Cazorla López, 2000 La proliferación actual de sistemas concurrentes, en general debido al abaratamiento sustancial de poderosos sistemas de cómputo, y el auge, cada vez mayor, que toman las aplicaciones distribuidas, hace que cada vez sea más interesante el estudio de los sistemas concurrentes en todos los aspectos de la Informática. La mayor complejidad y tamaño de los secuenciales convencionales exige el uso de técnicas adecuadas tanto para su diseño y análisis, como para su posterior implementación práctica. Este libro contiene las comunicaciones que han sido presentadas en la Octava edición de las Jornadas de Concurrencia, celebradas en Cuenca en junio de 2000. Este es un foro para el intercambio de experiencias entre los investigadores nacionales tanto de la Universidad como de la Industria en el campo de los sistemas concurrentes, y por tanto en él se muestran tanto los resultados teóricos como las aplicaciones industriales más recientes en esta materia.
