Hill, Jules Hogan, Anya Ow, Natasha Seymour, 2021-04-22 A collection of short stories by writers from around the world, exploring the climate crisis and how human responses to it will shape the futures we will inhabit. Featuring stories in styles ranging from science fiction and fabulism to literary fiction, weird fiction, and action-thriller, all drawn from the 2020 Everything Change Climate Fiction Contest. The contest and anthology are presented by the Imagination and Climate Futures Initiative at Arizona State University, a partnership of the Center for Science and the Imagination and the Virginia G. Piper Center for Creative Writing.

How to Avoid a Climate Disaster Bill Gates, 2021-02-16 #1 NEW YORK TIMES BEST SELLER • In this urgent, authoritative book, Bill Gates sets out a wide-ranging, practical—and accessible—plan for how the world can get to zero greenhouse gas emissions in time to avoid a climate catastrophe. Bill Gates has spent a decade investigating the causes and effects of climate change. With the help of experts in the fields of physics, chemistry, biology, engineering, political science, and finance, he has focused on what must be done in order to stop the planet's slide to certain environmental disaster. In this book, he not only explains why we need to work toward net-zero emissions of greenhouse gases, but also details what we need to do to achieve this profoundly important goal. He gives us a clear-eyed description of the challenges we face. Drawing on his understanding of innovation and what it takes to get new ideas into the market, he describes the areas in which technology is already helping to reduce emissions, where and how the current technology can be made to function more effectively, where breakthrough technologies are needed, and who is working on these essential innovations. Finally, he lays out a concrete, practical plan for achieving the goal of zero emissions—suggesting not only policies that governments should adopt, but what we as individuals can do to keep our government, our employers, and ourselves accountable in this crucial enterprise. As Bill Gates makes clear, achieving zero emissions will not be simple or easy to do, but if we follow the plan he sets out here, it is a goal firmly within our reach.

Under the Weather Tony Bradman, 2012-03-01 From the effects of rising sea levels to changes in animal behaviour and human lifestyles, these powerful stories portray the issues surrounding climate change in personal terms and so bring them

vividly to life. Offering warnings and inspiration in equal measure, the stories cover a wide range of localities from Siberia and Canada to Australia, UK, Sri Lanka and the Philippines. Writers include award-winning Linda Newbery as well as exciting newcomers like Australia's George Ivanoff. Whether read from cover to cover or dipped into for one or two stories, this book will enlighten and inspire everyone to consider how climate change will affect us all.

The Great Derangement Amitav Ghosh, 2017-07-24 Are we deranged? The acclaimed Indian novelist Amitav Ghosh argues that future generations may well think so. How else to explain our imaginative failure in the face of global warming? In his first major book of nonfiction since *In an Antique Land*, Ghosh examines our inability—at the level of literature, history, and politics—to grasp the scale and violence of climate change. The extreme nature of today's climate events, Ghosh asserts, make them peculiarly resistant to contemporary modes of thinking and imagining. This is particularly true of serious literary fiction: hundred-year storms and freakish tornadoes simply feel too improbable for the novel; they are automatically consigned to other genres. In the writing of history, too, the climate crisis has sometimes led to gross simplifications; Ghosh shows that the history of the carbon economy is a tangled global story with many contradictory and counterintuitive elements. Ghosh ends by suggesting that politics, much like literature, has become a matter of personal moral reckoning rather than an arena of collective action. But to limit fiction and politics to individual moral adventure comes at a great cost. The climate crisis asks us to imagine other forms of human existence—a task to which fiction, Ghosh argues, is the best suited of all cultural forms. His book serves as a great writer's summons to confront the most urgent task of our time.

Shrinking Sinking Land Kell Cowley, 2018-11-22 One week before the Global Mandatory Hibernation and Flea Wheeler will do anything to avoid a long winter underground. A claustrophobic climate refugee who has been living rough on the flooded streets of Manchester, Flea dreads the day she'll be forced into shelter so a geoengineering experiment can attempt to reverse the chaotic effects of global warming. Armed with nothing but her stolen umbrella, Flea is on a mission to stay on the surface and somehow survive the extreme weather. It turns out she's not the only one. While on the run from the curfew police, Flea falls in with loudmouth vlogger Dylan Moon who believes aliens are controlling the storms and planning a planetary takeover. At first, Flea takes Dil for a conspiracy nut. But after witnessing a series of inexplicable weather events, she realizes there may be some truth to his crazy theories. Is there a dark secret behind the looming climate experiment? Flea has one week left to evade the hibernation order and decide what she truly believes.--Page 4 of cover.

What We Think About When We Try Not To Think About Global Warming Per Espen Stoknes, 2015 Today, about 98 percent of scientists affirm that climate change is human made, and about 2 percent still question it. Despite that overwhelming majority, though, about half the population of rich countries, like ours, choose to believe the 2 percent. And, paradoxically, this large camp of deniers grows even larger as more and more alarming proof of climate change has cropped up over the last decades. This disconnect has both climate scientists and activists scratching their heads, growing anxious,

and responding, usually, by repeating more facts to 'win' the argument. But, the more climate facts pile up, the greater the resistance to them grows, and the harder it becomes to enact measures to reduce greenhouse gas emissions and prepare communities for the inevitable change ahead. Is humanity up to the task? It is a catch-22 that starts, says psychologist and climate expert Per Espen Stoknes, from an inadequate understanding of the way most humans think, act, and live in the world around them. With dozens of examples, he shows how to retell the story of climate change and apply communication strategies more fit for the task.--Publisher's description.

Waking Up To Climate Change: Five Dimensions Of The Crisis And What We Can Do About It George H Ropes,2022-11-22 For 15 years, author George Ropes has followed the unfolding story of climate change for the timely website ClimateYou.org. Along the way, he has covered myriad individual research studies, innovations, catastrophes, and signs of progress, from the resurgence of sustainable communities to lessons learned from the Australian wildfires. This enlightening book presents a selection of these key writings to describe the multifaceted ways that climate change affects

Global Climate Change Impacts in the United States U.S. Global Change Research Program,2009-08-24 Summarizes the science of climate change and impacts on the United States, for the public and policymakers.

False Alarm Bjorn Lomborg,2020-07-14 An “essential” (Times UK) and “meticulously researched” (Forbes) book by “the skeptical environmentalist” argues that panic over climate change is causing more harm than good Hurricanes batter our coasts. Wildfires rage across the American West. Glaciers collapse in the Arctic. Politicians, activists, and the media espouse a common message: climate change is destroying the planet, and we must take drastic action immediately to stop it. Children panic about their future, and adults wonder if it is even ethical to bring new life into the world. Enough, argues bestselling author Bjorn Lomborg. Climate change is real, but it's not the apocalyptic threat that we've been told it is. Projections of Earth's imminent demise are based on bad science and even worse economics. In panic, world leaders have committed to wildly expensive but largely ineffective policies that hamper growth and crowd out more pressing investments in human capital, from immunization to education. False Alarm will convince you that everything you think about climate change is wrong -- and points the way toward making the world a vastly better, if slightly warmer, place for us all.

Earth's Climate Response to a Changing Sun Katja Matthes,Thierry Dudok de Wit,Jean Lilensten,2021 For centuries, scientists have been fascinated by the role of the Sun in the Earth's climate system. Recent discoveries, outlined in this book, have gradually unveiled a complex picture, in which our variable Sun affects the climate variability via a number of subtle pathways, the implications of which are only now becoming clear. This handbook provides the scientifically curious, from undergraduate students to policy makers with a complete and accessible panorama of our present understanding of the Sun-climate connection. 61 experts from different communities have contributed to it, which reflects the highly multidisciplinary nature of this topic. The handbook is organised as a mosaic of short chapters, each of which addresses a specific aspect, and

can be read independently. The reader will learn about the assumptions, the data, the models, and the unknowns behind each mechanism by which solar variability may impact climate variability. None of these mechanisms can adequately explain global warming observed since the 1950s. However, several of them do impact climate variability, in particular on a regional level. This handbook aims at addressing these issues in a factual way, and thereby challenge the reader to sharpen his/her critical thinking in a debate that is frequently distorted by unfounded claims.

Global Warming Stephen Henry Schneider, 1990 'How important is a degree of temperature change? A degree or two temperature change is not a trivial number in global terms and it usually takes nature hundreds of thousands of years to bring it about on her own. We may be doing that in decades ... Humans are putting pollutants into the atmosphere at such a rate that we could be changing the climate on a sustained basis some ten to a hundred times faster than nature has since the height of the last ice age.' Stephen H. Schneider. This essential book examines the causes of world-wide climatic change - the 'greenhouse effect' - that may raise world temperatures by five degrees Celsius in less than a century. Author Stephen H. Schneider describes the likely consequences - from agricultural changes and rises in sea level to public health issues and social upheaval - and addresses the most important and urgent question that anyone concerned with the fate of our planet must confront: 'What can or should be done about the greenhouse effect?' Global Warming offers a prophetic look at a year in the greenhouse century, one of slowly increasing global temperatures (a century that may have already begun). The immediate scenarios are grave: population pressures combined with devastating floods and hurricanes drive millions of 'environmental refugees from South East Asia to find homes in Australia; California smothers under heat, smog, water shortages, and raging forest fires; and New York experiences summer heat waves so intense that hospital emergency rooms are jammed with victims. The outlook for Britain could be equally serious: the UN predicts that global warming may cause severe winter storms, the flooding of coastal defences, and even malaria in Southern England. Dr Schneider provides an authoritative and entertaining look at the science, personalities and politics behind the problem of global warming. He explains in clear, non-technical language what is scientifically well known, what is speculative, and where the major uncertainties lie. He presents an overview of sixty million years of global climate history, explaining the mechanisms that regulate climate, demonstrates how a few degrees variation can precipitate dramatic events such as the Ice Age, and discusses how predictions are made by computer modelling to anticipate climatic changes into the next century. Global Warming provides a revealing inside look at the problems scientists encounter in dealing with other scientists, politicians and the media. Although statesmen have called for a giant international effort to tackle the issue, few concrete measures have been taken so far. Global Warming outlines the ways individuals, governments and businesses can work together to slow down the damage our impact has inflicted on the planet, and help make global development more environmentally sustainable.

Communicating Climate Change Anne K. Armstrong, Marianne E. Krasny, Jonathon P. Schuldt, 2018-11-15 Environmental educators face a formidable challenge when they approach climate change due to the complexity of the science and of the political and cultural contexts in which people live. There is a clear consensus among climate scientists that climate change is already occurring as a result of human activities, but high levels of climate change awareness and growing levels of concern have not translated into meaningful action. *Communicating Climate Change* provides environmental educators with an understanding of how their audiences engage with climate change information as well as with concrete, empirically tested communication tools they can use to enhance their climate change program. Starting with the basics of climate science and climate change public opinion, Armstrong, Krasny, and Schuldt synthesize research from environmental psychology and climate change communication, weaving in examples of environmental education applications throughout this practical book. Each chapter covers a separate topic, from how environmental psychology explains the complex ways in which people interact with climate change information to communication strategies with a focus on framing, metaphors, and messengers. This broad set of topics will aid educators in formulating program language for their classrooms at all levels. *Communicating Climate Change* uses fictional vignettes of climate change education programs and true stories from climate change educators working in the field to illustrate the possibilities of applying research to practice. Armstrong et al, ably demonstrate that environmental education is an important player in fostering positive climate change dialogue and subsequent climate change action. Thanks to generous funding from Cornell University, the ebook editions of this book are available as Open Access from Cornell Open (cornellpress.cornell.edu/cornell-open) and other Open Access repositories.

Anthropocene Fictions Adam Trexler, 2015-04-20 Since the Industrial Revolution, humans have transformed the Earth's atmosphere, committing our planet to more extreme weather, rising sea levels, melting polar ice caps, and mass extinction. This period of observable human impact on the Earth's ecosystems has been called the Anthropocene Age. The anthropogenic climate change that has impacted the Earth has also affected our literature, but criticism of the contemporary novel has not adequately recognized the literary response to this level of environmental crisis. Ecocriticism's theories of place and planet, meanwhile, are troubled by a climate that is neither natural nor under human control. *Anthropocene Fictions* is the first systematic examination of the hundreds of novels that have been written about anthropogenic climate change. Drawing on climatology, the sociology and philosophy of science, geography, and environmental economics, Adam Trexler argues that the novel has become an essential tool to construct meaning in an age of climate change. The novel expands the reach of climate science beyond the laboratory or model, turning abstract predictions into subjectively tangible experiences of place, identity, and culture. Political and economic organizations are also being transformed by their struggle

for sustainability. In turn, the novel has been forced to adapt to new boundaries between truth and fabrication, nature and economies, and individual choice and larger systems of natural phenomena. Anthropocene Fictions argues that new modes of inhabiting climate are of the utmost critical and political importance, when unprecedented scientific consensus has failed to lead to action. Under the Sign of Nature: Explorations in Ecocriticism

The Uninhabitable Earth David Wallace-Wells, 2019-02-19 #1 NEW YORK TIMES BESTSELLER • “The Uninhabitable Earth hits you like a comet, with an overflow of insanely lyrical prose about our pending Armageddon.”—Andrew Solomon, author of *The Noonday Demon* NAMED ONE OF THE BEST BOOKS OF THE YEAR BY *The New Yorker* • *The New York Times* Book Review • *Time* • NPR • *The Economist* • *The Paris Review* • *Toronto Star* • *GQ* • *The Times Literary Supplement* • *The New York Public Library* • *Kirkus Reviews* It is worse, much worse, than you think. If your anxiety about global warming is dominated by fears of sea-level rise, you are barely scratching the surface of what terrors are possible—food shortages, refugee emergencies, climate wars and economic devastation. An “epoch-defining book” (*The Guardian*) and “this generation’s *Silent Spring*” (*The Washington Post*), *The Uninhabitable Earth* is both a travelogue of the near future and a meditation on how that future will look to those living through it—the ways that warming promises to transform global politics, the meaning of technology and nature in the modern world, the sustainability of capitalism and the trajectory of human progress. *The Uninhabitable Earth* is also an impassioned call to action. For just as the world was brought to the brink of catastrophe within the span of a lifetime, the responsibility to avoid it now belongs to a single generation—today’s. LONGLISTED FOR THE PEN/E.O. WILSON LITERARY SCIENCE WRITING AWARD “The Uninhabitable Earth is the most terrifying book I have ever read. Its subject is climate change, and its method is scientific, but its mode is Old Testament. The book is a meticulously documented, white-knuckled tour through the cascading catastrophes that will soon engulf our warming planet.”—Farhad Manjoo, *The New York Times* “Riveting. . . . Some readers will find Mr. Wallace-Wells’s outline of possible futures alarmist. He is indeed alarmed. You should be, too.”—*The Economist* “Potent and evocative. . . . Wallace-Wells has resolved to offer something other than the standard narrative of climate change. . . . He avoids the ‘eerily banal language of climatology’ in favor of lush, rolling prose.”—Jennifer Szalai, *The New York Times* “The book has potential to be this generation’s *Silent Spring*.”—*The Washington Post* “The Uninhabitable Earth, which has become a best seller, taps into the underlying emotion of the day: fear. . . . I encourage people to read this book.”—Alan Weisman, *The New York Review of Books*

American Literature in Transition, 2000-2010 Rachel Greenwald Smith, 2017-12-28 *American Literature in*

Transition, 2000–2010 illuminates the dynamic transformations that occurred in American literary culture during the first decade of the twenty-first century. The volume is the first major critical collection to address the literature of the 2000s, a decade that saw dramatic changes in digital technology, economics, world affairs, and environmental awareness. Beginning with an introduction that takes stock of the period's major historical, cultural, and literary movements, the volume features accessible essays on a wide range of topics, including genre fiction, the treatment of social networking in literature, climate change fiction, the ascendancy of Amazon and online booksellers, 9/11 literature, finance and literature, and the rise of prestige television. Mapping the literary culture of a decade of promise and threat, *American Literature in Transition, 2000–2010* provides an invaluable resource on twenty-first century American literature for general readers, students, and scholars alike.

Climate Change: Evidence, Impacts, and Choices Division on Earth and Life Studies, National Research Council, 2012-11-12 What is climate? Climate is commonly thought of as the expected weather conditions at a given location over time. People know when they go to New York City in winter, they should take a heavy coat. When they visit the Pacific Northwest, they should take an umbrella. Climate can be measured as many geographic scales - for example, cities, countries, or the entire globe - by such statistics as average temperatures, average number of rainy days, and the frequency of droughts. Climate change refers to changes in these statistics over years, decades, or even centuries. Enormous progress has been made in increasing our understanding of climate change and its causes, and a clearer picture of current and future impacts is emerging. Research is also shedding light on actions that might be taken to limit the magnitude of climate change and adapt to its impacts. *Climate Change: Evidence, Impacts, and Choices* is intended to help people understand what is known about climate change. First, it lays out the evidence that human activities, especially the burning of fossil fuels, are responsible for much of the warming and related changes being observed around the world. Second, it summarizes projections of future climate changes and impacts expected in this century and beyond. Finally, the booklet examines how science can help inform choice about managing and reducing the risks posed by climate change. The information is based on a number of National Research Council reports, each of which represents the consensus of experts who have reviewed hundreds of studies describing many years of accumulating evidence.

Anthropocene Reading Tobias Menely, Jesse Oak Taylor, 2017-10-13 Few terms have garnered more attention recently in the sciences, humanities, and public sphere than the Anthropocene, the proposed epoch in which a human “signature” appears in the lithostratigraphic record. *Anthropocene Reading* considers the implications of this concept for literary history and critical method. Entering into conversation with geologists and geographers, this volume reinterprets the cultural past in relation to the anthropogenic transformation of the Earth system while showcasing how literary analysis may help us conceptualize this geohistorical event. The contributors examine how a range of literary texts, from *The Tempest* to

contemporary dystopian novels to the poetry of Emily Dickinson, mediate the convergence of the social institutions, energy regimes, and planetary systems that support the reproduction of life. They explore the long-standing dialogue between imaginative literature and the earth sciences and show how scientists, novelists, and poets represent intersections of geological and human timescales, the deep past and a posthuman future, political exigency and the carbon cycle. Accessibly written and representing a range of methodological perspectives, the essays in this volume consider what it means to read literary history in the Anthropocene. Contributors include Juliana Chow, Jeffrey Jerome Cohen, Thomas H. Ford, Anne-Lise François, Noah Heringman, Matt Hooley, Stephanie LeMenager, Dana Luciano, Steve Mentz, Benjamin Morgan, Justin Neuman, Jennifer Wenzel, and Derek Woods.
