Innovations and artificial intelligence along the energy industry value chain taking into account data security and data protection Heinz-Adalbert Krebs, Patricia Hagenweiler, 2022-01-01 The energy industry worldwide is facing one of the most profound changes in its history, which will be accompanied by breakthrough innovations and the exponentially evolving use of artificial intelligence in business processes. In addition to the use of artificial intelligence and AI-supported unmanned systems (on land, at sea and in the air), distributed-ledger-technologies, extended reality and 3D-print based on cyber-physical systems and the Internet of Things, as well as process mining, robotic process automation, data science and cloud computing, for example, will not only decisively shape a sustainable energy supply system in the future, but also accelerate the transformation to energy industry 4.0. At the same time, the increasingly strong networking (smart grid, smart meter, smart home, smart city) of the energy industry and its environment is associated with a growing risk potential, which must be expanded in the future as part of a high-quality cyber resilience, in particular through the use of artificial intelligence. Without the development and use of innovations and artificial intelligence in the context of increasingly digitized

business processes, there is a risk that neither the energy transition can be successfully implemented nor climate change combated. In addition to the fundamentals of the classic, primarily analog energy industry, the publication addresses the possible paradigm shift that will be characterized by innovations, disruptive technologies and digital business models in the energy industry.

Innovationen und künstliche Intelligenz entlang der energiewirtschaftlichen Wertschöpfungskette unter Berücksichtigung der Datensicherheit und des Datenschutzes Heinz-Adalbert Krebs, Patricia Hagenweiler, 2021-01-01 Die Energiewirtschaft steht weltweit vor einer der tiefgreifendsten Veränderungen ihrer Geschichte, welche mit bahnbrechenden Innovationen und dem sich exponentiell entwickelnden Einsatz von künstlicher Intelligenz in den Geschäftsprozessen einhergehen werden. Neben dem Einsatz der künstlichen Intelligenz und KI-gestützten unbemannten Systemen (zu Land, zu Wasser und in der Luft) werden beispielsweise Distributed-Ledger-Technologien, Extended Reality und der 3D-Druck auf der Basis von Cyber-Physischen Systemen und dem Internet of Things sowie von Process Mining, Robotic Process Automation, Data Science und Cloud-Computing in Zukunft ein nachhaltiges Energieversorgungssystem nicht nur entscheidend prägen, sondern auch den Wandel zur Energiewirtschaft 4.0 beschleunigen. Zugleich ist die zunehmend stärkere Vernetzung (Smart Grid, Smart Meter, Smart Home, Smart City) der Energiewirtschaft und ihres Umfelds mit einem wachsenden Risikopotenzial verbunden, welche es im Rahmen einer hochwertigen Cyber-Resilienz künftig insbesondere durch den Einsatz von künstlicher Intelligenz auszubauen gilt. Ohne die Entwicklung und den Einsatz von Innovationen sowie der künstlichen Intelligenz im Rahmen der zunehmend stärker digitalisierten Geschäftsprozesse besteht das Risiko, dass weder die Energiewende erfolgreich umgesetzt noch der Klimawandel bekämpft werden können. Die Publikation thematisiert neben den Grundlagen der klassisch primär analogen Energiewirtschaft den möglichen Paradigmenwechsel, welcher durch Innovationen, disruptive Technologien und digitale Geschäftsmodelle in der Energiewirtschaft geprägt sein wird.

Balancing Renewable Electricity Bert Droste-Franke, Boris P. Paal, Christian Rehtanz, Dirk Uwe Sauer, Jens-Peter Schneider, Miranda Schreurs, Thomas Ziesemer, 2012-01-21 An important aim behind the restructuring of Germany's and Europe's electricity systems is to reduce the environmental burden, especially with respect to greenhouse gas emissions, of the current systems. Emissions must be brought down to a level that is sustainable in the long run and consistent with greenhouse gas emission reduction goals. Meeting these goals will require a system (as best as current knowledge suggests) that will be able to cope simultaneously with the fundamental demands for economic efficiency, environmental sustainability and supply security. Making use of existing scenarios, this study sketches such a system. It focuses in particular on auxiliary systems such as energy storage methods and network extensions. The study introduces technologies that can balance electricity in energy systems and that can serve as enabling technologies for the integration of large quantities of renewable energies in the power supply system. It begins with a discussion of normative aims for the future electricity system before

continuing with a description of current policies and political developments and an overview of relevant existing energy system studies. These sections serve as background for the remainder of the study. They are followed by discussion and analysis of the growing demand for means to balance the fluctuations found in electricity generated in power systems with a high penetration of renewable energies, the potentials of diverse technologies, requirements for electrical networks, economic impacts and important legal issues. Finally, the main challenges to the achievement of developing balancing technologies and processes for renewable electricity-dominant systems are summarised and recommendations made.

Technology and the City Michael Nagenborg,Taylor Stone,Margoth González Woge,Pieter E. Vermaas,2021-01-25 The contributions in this volume map out how technologies are used and designed to plan, maintain, govern, demolish, and destroy the city. The chapters demonstrate how urban technologies shape, and are shaped, by fundamental concepts and principles such as citizenship, publicness, democracy, and nature. The many authors herein explore how to think of technologically mediated urban space as part of the human condition. The volume will thus contribute to the much-needed

discussion on technology-enabled urban futures from the perspective of the philosophy of technology. This perspective also contributes to the discussion and process of making cities 'smart' and just. This collection appeals to students, researchers, and professionals within the fields of philosophy of technology, urban planning, and engineering.

Digital Marketplaces Unleashed Claudia Linnhoff-Popien, Ralf Schneider, Michael Zaddach, 2017-09-14 This collection of different views on how digitalization is influencing various industrial sectors addresses essential topics like big data and analytics, fintech and insurtech, cloud and mobility technologies, disruption and entrepreneurship. The technological advances of the 21st century have been massively impacted by the digital upheaval: there is no future without digitalization. The sale of products and services has left the classical point of sale and now takes place on a variety of channels. Whether in the automotive industry, travel and traffic, in cities, or the financial industry - newly designed ecosystems are being created everywhere; data is being generated and analyzed in real time; and companies are competing for mobile access channels to customers in order to gain knowledge about their individual contexts and preferences. In turn, customers can now publicly share their opinions, experiences and knowledge as User Generated Content, allowing them to impact the market and empowering them to build or destroy trust.

City Branding K. Dinnie, 2010-12-03 The practice of city branding is being adopted by increasing numbers of city authorities around the world and it is having a direct impact on public and private sector practice. The author captures this emerging phenomenon in a way that blends a solid theoretical and conceptual underpinning together with relevant real life cases.

Living Technology Armin Grunwald, 2021-06-16 The boundaries between inanimate technology and the realm of the living become increasingly blurred. Deeper and deeper technological interventions into living organisms are possible, covering the entire spectrum of life from bacteria to humans. Simultaneously, digitalization and artificial intelligence (AI) enable increasingly autonomous technologies. Inanimate technologies such as robots begin to show characteristics of life. Contested issues pop up, such as the dignity of life, the enhancement of animals for human purposes, the creation of designer babies, and the granting of robot rights. The book addresses the understanding of the ongoing dissolution of the life/technology borders, the provision of ethical guidance for navigating research and innovation responsibly, and the philosophical reflection on the meaning of the current shifts. It offers three specific perspectives for understanding the challenges and providing orientation. First, the dissolution of the boundaries between technology and life is analyzed and reflected from both sides. Second, the search for orientation is not restricted to ethics but also involves philosophy of technology and of nature, as well as anthropology. Finally, instead of restricting the analysis to specific areas of life, e.g., bacteria or animals, the book presents a comprehensive look at the entire spectrum of living organisms—bacteria and viruses, plants, animals and

humans—and robots as possible early forms of emerging technical life.

Religious Individualisation Martin Fuchs, Antje Linkenbach, Martin Mulsow, Bernd-Christian Otto, Rahul Björn Parson, Jörg Rüpke, 2019-12-16 This volume brings together key findings of the long-term research project 'Religious Individualisation in Historical Perspective' (Max Weber Centre for Advanced Cultural and Social Studies, Erfurt University). Combining a wide range of disciplinary approaches, methods and theories, the volume assembles over 50 contributions that explore and compare processes of religious individualisation in different religious environments and historical periods, in particular in Asia, the Mediterranean, and Europe from antiquity to the recent past. Contrary to standard theories of modernisation, which tend to regard religious individualisation as a specifically modern or early modern as well as an essentially Western or Christian phenomenon, the chapters reveal processes of religious individualisation in a large variety of non-Western and pre-modern scenarios. Furthermore, the volume challenges prevalent views that regard religions primarily as collective phenomena and provides nuanced perspectives on the appropriation of religious agency, the pluralisation of religious options, dynamics of de-traditionalisation and privatisation, the development of elaborated notions of the self, the facilitation of religious deviance, and on the notion of dividuality.

Swarm Creativity Peter A. Gloor, 2006-01-05 *Swarm Creativity* introduces a powerful new concept—Collaborative Innovation Networks, or COINs. Its aim is to make the concept of COINs as ubiquitous among business managers as any methodology to enhance quality and competitive advantage. The difference though is that COINs are nothing like other methodologies. A COIN is a cyberteam of self-motivated people with a collective vision, enabled by technology to collaborate in achieving a common goal—innovation—by sharing ideas, information, and work. It is no exaggeration to state that COINs are the most productive engines of innovation ever. COINs have been around for hundreds of years. Many of us have already been a part of one without knowing it. What makes COINs so relevant today, though is that the concept has reached its tipping point—thanks to the Internet and the World Wide Web. This book explores why COINs are so important to business success in the new century. It explains the traits that characterize COIN members and COIN behavior. It makes the case for why businesses ought to be rushing to uncover their COINs and nurture them, and provides tools for building organizations that are more creative, productive and efficient by applying principles of creative collaboration, knowledge sharing and social networking. Through real-life examples in several business sectors, the book shows how to leverage COINs to develop successful products in R & D, grow better customer relationships, establish better project management, and build higher-performing teams. In short, this book answers four key questions: Why are COINs better at innovation? What are the key elements of COINs? Who are the people that participate in COINs and how do they become members? And how does an organization transform itself into a Collaborative Innovation Network?

Analytical Philosophy of Technology F. Rapp, 2012-12-06 Friedrich Rapp, in this magisterial and critical essay on

technology, the complex human phenomenon that demands philosophy of science, philosophy of culture, moral insight, and historical sensitivity for its understanding, writes modestly of the grave and tentative situation in the philosophy of technology. Despite the profound thinkers who have devoted time and imagination and rational penetration, despite the massive literature now available, the varied and comparative viewpoints of political, analytic, despite metaphysical, cultural, even esthetic commitments, indeed despite the honest joining of historical and systematic methods of investigation, we are far from a satisfactory understanding of the joys and sorrows, the achievements and disappointments, of the technological saga of human societies. Professor Rapp has prepared this report on the philosophical understanding of technology for a troubled world; if ever philosophy were needed, it is in the practical attempt to find alternatives among technologies, to foresee dangers and opportunities, to choose with a sense of the possibility of fulfilling humane values. Emerson spoke of the scholar not as a specialist apart, but as 'Man thinking' and Rapp's essay so speaks to all of us, industrial world or third world, engineers or humanists, tired or energetic, fearful or optimistic.

The Transportation Experience William L. Garrison, David M. Levinson, 2005-10-13 While much of the transportation systems in Europe and the United States are mature (if not senescent), the rest of the world is still planning, developing, and deploying new systems. The accomplishments and mistakes of places like the United Kingdom and the United States, then, can teach us lessons that may be applied to places where transportation remains nascent or adolescent. The Transportation Experience seeks to understand the genesis of transportation policy in America and the UK, along with the roles that this policy plays as systems are innovated, deployed, and reach maturity, and how policies might be improved.

Technology Assessment in Practice and Theory Armin Grunwald, 2018-11-08 Technological advance affects almost all areas of human life. Rapid digitization, increased mobility, new biotechnologies, and nanotechnology deeply influence, amongst others, industrial production, entertainment, work, military affairs, and individual life. Besides overwhelmingly positive effects on wealth, comfort, innovation, and development, this also raises questions of unintended effects, of tensions with democracy, of the role of citizens, and of its sustainability facing environmental issues. Tools and procedures are needed to cope with this challenging situation. Technology assessment (TA) has been developed more than fifty years ago to enable science, the economy, and society to harvest the potential of new technology to the maximum extent possible and to deal responsibly with possible adverse effects. It was developed more than 50 years ago in the U.S. Congress and has diversified considerably in the meantime. Parliamentary TA in many European states and at the international level, participatory TA at the local and regional levels worldwide, and TA as part of engineering processes are the most relevant fields today. Technology assessment is a growing field of interdisciplinary research and scientific policy advice. This volume (a) gives an overview of motivations of TA, its history and its current practices, (b) develops a fresh theoretical perspective on TA rooted in social theory and philosophy, and (c) draws conclusions from the theoretical perspective for the further development of

TA's practices. It provides the first comprehensive view on the growing field of TA at the international level.

Handbook of Internet Crime Yvonne Jewkes, Majid Yar, 2013-03-07 An essential reference for scholars and others whose work brings them into contact with managing, policing and regulating online behaviour, the Handbook of Internet Crime emerges at a time of rapid social and technological change. Amidst much debate about the dangers presented by the Internet and intensive negotiation over its legitimate uses and regulation, this is the most comprehensive and ambitious book on cybercrime to date. The Handbook of Internet Crime gathers together the leading scholars in the field to explore issues and debates surrounding internet-related crime, deviance, policing, law and regulation in the 21st century. The Handbook reflects the range and depth of cybercrime research and scholarship, combining contributions from many of those who have established and developed cyber research over the past 25 years and who continue to shape it in its current phase, with more recent entrants to the field who are building on this tradition and breaking new ground. Contributions reflect both the global nature of cybercrime problems, and the international span of scholarship addressing its challenges.

Handbook of Nanoethics Gunjan Jeswani, Marcel Van de Voorde, 2021-09-07 With nanotechnology being a relatively new field, the questions regarding safety and ethics are steadily increasing with the development of the research. This book aims to give an overview on the ethics associated with employing nanoscience for products with everyday applications. The risks as well as the regulations are discussed, and an outlook for the future of nanoscience on a manufacturer's scale and for the society is provided. Handbook of Nanoethics is perfect for , academicians and scientist, as well as all other industry professionals and researchers. It is a good introduction for newcomers in the field who do not want to dive deep into the details but are eager to understand the ethical challenges and possible solution related to nanotechnology and ethics.

e-topia William J. Mitchell, 2000-08-25 How an electronically connected world will shape cities and urban relationships of the future. The global digital network is not just a delivery system for email, Web pages, and digital television. It is a whole new urban infrastructure—one that will change the forms of our cities as dramatically as railroads, highways, electric power supply, and telephone networks did in the past. In this lucid, invigorating book, William J. Mitchell examines this new infrastructure and its implications for our future daily lives. Picking up where his best-selling City of Bits left off, Mitchell argues that we must extend the definitions of architecture and urban design to encompass virtual places as well as physical ones, and interconnection by means of telecommunication links as well as by pedestrian circulation and mechanized transportation systems. He proposes strategies for the creation of cities that not only will be sustainable but will make economic, social, and cultural sense in an electronically interconnected and global world. The new settlement patterns of the twenty-first century will be characterized by live/work dwellings, 24-hour pedestrian-scale neighborhoods rich in social relationships, and vigorous local community life, complemented by far-flung configurations of electronic meeting places and decentralized production, marketing, and distribution systems. Neither digiphile nor digiphobe, Mitchell advocates the

creation of e-topias—cities that work smarter, not harder.
