HACCP in Meat, Poultry and Fish Processing A.M. Pearson, T.R. Dutson, 1999-01-31 Since its development by The Pillsbury Company as part of the US space program, the HACCP (hazard analysis critical control point) system has become the most important technique for the identification and prevention of foodborne biological, chemical and physical hazards in food processing. This book presents the latest information on the HACCP concept and gives practical examples of its implementation at all stages of food production and processing from the farm to the consumer. In addition, guidelines are given for the management of the HACCP system within the food industry and how it can be incorporated into a total quality management program. The role of predictive microbiology in HACCP is examined and the relationship of HACCP principles to existing and future international agreements and regulations is explained. This book is essential reading for quality control personnel, production and processing managers in the food industry, and for government regulatory officials. It will also be of great interest to academic researchers studying the microbiology and quality of meat, poultry and fish products.

To achieve this goal, the editor uses five approaches. The first part deals with the main biological contaminants like pathogen microorganisms, specially E. coli and L. monocytogenes, toxins and biogenic amines that can be present either in meat or its derived products. The second part focuses on main technologies for meat decontamination as well as developments like active packaging or bioprotective cultures to extend the shelf life. The third part presents non-biological contaminants and residues in meat and meat products including nitrosamines, PAH, veterinary drugs and environmental compounds. The fourth part discusses current methodologies for the detection of microorganisms, its toxins, veterinary drugs, environmental contaminants and GMOs, and the final part deals with predictive models, risk assessment, regulations on meat safety, consumer perception, and other recent trends in the field. Lactose Restricted Diet R. M. Downey,1982

Glazed America Paul R. Mullins,2008-09-07 Everybody loves a good doughnut. The magic combination of soft dough, hot oil, and sugar coating--with or without sprinkles--inspires a wide range of surprisingly powerful memories and cravings. Yet we are embarrassed by our desire; the favorite food of Homer Simpson, caricatured as the dietary cornerstone of cops, a symbol of our collective descent into obesity, doughnuts are, in the words of one California consumer, a food of shame. Paul Mullins turns his attention to the simple doughnut in order to learn more about North American culture and society. Both a breakfast staple and a snack to eat any time of day or night, doughnuts cross lines of gender, class, and race like no other

food item. Favorite doughnut shops that were once neighborhood institutions remain unchanged--even as their surrounding neighborhoods have morphed into strip clubs, empty lots, and abandoned housing. Blending solid scholarship with humorous insights, Mullins offers a look into doughnut production, marketing, and consumption. He confronts head-on the question of why we often paint doughnuts in moral terms, and shows how the seemingly simple food reveals deep and complex social conflicts over body image and class structure. In Mullins's skillful hands, this simple pastry provides surprisingly compelling insights into our eating habits, our identity, and modern consumer culture.

Food Safety = Behavior Frank Yiannas,2016-10-29 This book helps in Achieving food safety success which requires going beyond traditional training, testing, and inspectional approaches to managing risks. It requires a better understanding of the human dimensions of food safety. In the field of food safety today, much is documented about specific microbes, time/temperature processes, post-process contamination, and HACCP--things often called the hard sciences. There is not much published or discussed related to human behavior--often referred to as the "soft stuff." However, looking at foodborne disease trends over the past few decades and published regulatory out-of-compliance rates of food safety risk factors, it's clear that the soft stuff is still the hard stuff. Despite the fact that thousands of employees have been trained in food safety around the world, millions have been spent globally on food safety research, and countless inspections and tests have been performed at home and abroad, food safety remains a significant public health challenge. Why is that? Because to improve food safety, we must realize that it's more than just food science; it's the behavioral sciences, too. In fact, simply put, food safety equals behavior. This is the fundamental principle of this book. If you are trying to improve the food safety performance of a retail or food service establishment, an organization with thousands of employees, or a local community,

what you are really trying to do is change people's behavior. The ability to influence human behavior is well documented in the behavioral and social sciences. However, significant contributions to the scientific literature in the field of food safety are noticeably absent. This book will help advance the science by being the first significant collection of 50 proven behavioral science techniques, and be the first to show how these techniques can be applied to enhance employee compliance with desired food safety behaviors and make food safety the social norm in any organization.
