Sistema de agua potable Alejandro Quijano,2024-05-22 Este texto indica la forma de elaborar un diseño dimensional de las estructuras hidráulicas necesarias para llevar el agua potable desde el sitio de bocatoma hasta la red secundaria de cualquier población donde se encuentre la necesidad primaria o se requiera efectuar la revisión a su sistema en funcionamiento, según las normas vigentes. Está explicado, paso a paso, y puede ser entendible para cualquier persona que le guste el tema o que lo requiera por la necesidad de su comunidad. El libro utiliza fórmulas y/o ecuaciones sencillas de la hidráulica básica, el método de Hardy Cross y el software Epanet para el diseño de los sistemas incorporados, con esquemas, dibujos o imágenes representativas de cada paso dado, de tal forma que sea fácil y útil su seguimiento por quien lo desea utilizar como guía.

Manual Para El Desarrollo de Planes de Seguridad del Agua World Health Organization, 2010-06-04 En 2004, las Guías de la OMS para la calidad del agua potable recomendaron que los proveedores de agua elaboraran y ejecutaran planes de seguridad del agua (PSA) para evaluar y gestionar los riesgos de forma sistemática. Desde entonces, cada vez más gobiernos y autoridades reguladoras, proveedores de agua y profesionales han aceptado este método, pero además han solicitado orientación adicional. El presente cuaderno didáctico, esperado desde hace largo tiempo, responde a esta demanda, describiendo, de forma clara y práctica, como elaborar y ejecutar un PSA. Proporciona orientación paso a paso, en 11 módulos didácticos correspondientes a los diferentes pasos clave del proceso de elaboración y ejecución del PSA.

El manejo integral de cuencas en México, 2004

La región hidropolitana de la Ciudad de México Arsenio Ernesto González, 2018-01-11 A lo largo de cuatro siglos las obras de drenaje, evacuación de aguas negras y pluviales, así como las obras de importación de agua modificaron la condición natural cerrada de la cuenca del Valle de México y, mediante trasvases de gran escala, la vincularon artificialmente a otras tres cuencas hidrológicas. De este modo, las necesidades de agua y de drenaje de uno de los mayores fenómenos urbanos del mundo articularon las cuencas del Valle de México, Alto Lerma, Cutzamala y Tula en un ciclo urbano del agua de gran magnitud e impactos regionales. Al territorio que responde a esta articulación hidráulica de las cuatro cuencas se le conoce desde hace una década como región hidropolitana. La particularidad histórica de la Ciudad de México durante el siglo XX y lo que va del XXI es haber sido y continuar siendo la capital de la república. Por ello, el discurso que ha

justificado el trasvase de agua desde otras regiones es el discurso nacionalista. En las páginas de este libro se profundiza en la dimensión simbólica de la construcción de los acueductos Lerma y Cutzamala; se revisa la demanda interpuesta por el gobierno del Estado de México en la que exige la reparación de los daños ocasionados por medio siglo de extracción del líquido de la zona del Lerma; y se analiza la irrupción mediática del movimiento mazahua por la defensa del agua en Villa Victoria y su denuncia de injusticia en materia de política hídrica. El análisis identifica formaciones discursivas que dan sentido y justifican las acciones de los agentes que se enfrentan por la apropiación y defensa del agua en las cuencas cedentes, es decir, en las zonas de captación de los sistemas Lerma y Cutzamala.

El agua que bebemos. La necesidad de un nuevo sistema de tarifas en España Sánchez García, Victoria Eugenia, 2014-12-01 La primera parte, titulada estado del recurso agua en Europa y España, presenta los distintos aspectos técnicos, sociales y económicos relacionados con la cantidad y calidad de los recursos hídricos existentes y las previsiones de futuro que incidirán sobre su disponibilidad, como es el caso de las previsiones de evolución de las urbes y los efectos estimados del cambio climático sobre los países europeos. En la segunda parte del libro, aproximación al régimen jurídico-administrativo de la gestión y abastecimiento del agua urbana y sus aspectos económicos, se aborda de forma sucinta el marco regulador europeo, para descender al ámbito español, finalizando con la regulación local. La tercera parte, valor del agua y el sistema tarifario español, donde se repasan los aspectos relativos a la valoración económica del agua, modelos de estudios realizados sobre el agua de consumo doméstico y se presentan los casos de estudio para analizar lo que está sucediendo en importantes ciudades españolas. El libro se cierra con un epílogo, en el que se recogen las principales conclusiones extraídas de los trabajos de estudio y análisis de la situación del recurso, el marco regulador y, más concretamente de la idoneidad del sistema tarifario español.
