Jewelry artists will enjoy a collection of new, less-common weaves and challenging projects that inspire and educate. She explains techniques needed when working beyond the basics: methods for closing a weave, working with micro rings, working large scale, and using alternative materials in weaves. The book is then divided into 4 sections, each devoted to a particular type of weave: new Persian weaves, Elf-based weaves, Hybrid weaves, and Scale Maille weaves that incorporate sheet metal scales into traditional weaves for a striking effect. Sprinkled throughout the illustrated step-by-step instructions for each weave technique are valuable tips from Karen to help ensure a beautiful finished piece.

Classical Loop-in-Loop Chains J.R. Smith,2013-04-18 This is not only a book of instruction in chainmaking but it is also a work celebrating man's continuous creativity over thousands of years. At times something that man creates has far-reaching effects; an example that quickly comes to mind is the wheel, which has enabled many developments, from pottery to computers. At this point it is important to note that these same wheels could not have been made without metal tools. From early Neolithic times on gold was a favorite choice in the making of jewelry. During the Neolithic period these shining stones, probably alluvial, were prized. Actually gold was cold worked as if it were a stone. There is a surviving example of cold-worked gold from Catalhuyuk (present day Turkey) estimated to have been made in 6500 B. C. There were only four metals on the earth's surface that were found in sufficient quantity to be used: gold, copper, silver, and meteoric iron. An understanding of the malleability of gold, and of the annealing effect of fire, changed jewelry making; new forms were found. Gold was no longer a piece of stone but a material that could be flattened and made very thin. Sheet and foil are the oldest forms of worked gold. The smiths' tools were stone, wood, and horn.
