The Psychology of Learning Science Shawn M. Glynn, Bruce K. Britton, Russell H. Yeany, 2012-11-12 Focusing on the teaching and learning of science concepts at the elementary and high school levels, this volume bridges the gap between state-of-the-art research and classroom practice in science education. The contributors -- science educators, cognitive scientists, and psychologists -- draw clear connections between theory, research, and instructional application, with the ultimate goal of improving science teachers' effectiveness in the classroom. Toward this end, explicit models, illustrations, and examples drawn from actual science classes are included.

Multiple Representations in Chemical Education John K. Gilbert, David Treagust, 2009-02-28 Chemistry seeks to provide qualitative and quantitative explanations for the observed behaviour of elements and their compounds. Doing so involves making use of three types of representation: the macro (the empirical properties of substances); the sub-micro (the natures of the entities giving rise to those properties); and the symbolic (the number of entities involved in any changes that take place). Although understanding this triplet relationship is a key aspect of chemical education, there is considerable evidence that students find great difficulty in achieving mastery of the ideas involved. In bringing together the work of leading chemistry educators who are researching the triplet relationship at the secondary and university levels, the book discusses the learning involved, the problems that students encounter, and successful approaches to teaching. Based on the reported research, the editors argue for a coherent model for understanding the triplet relationship in chemical education.

Avances de investigación en Nanociencias, Micro y Nanotecnologías (Vol. III) Eduardo San Martín Martínez, 2021-12-16 La ciencia de los materiales a escala nanométrica, está desarrollando materiales en las diversas áreas del conocimiento. Es necesario ahora más que nunca buscar en los desarrollos de la nanotecnología la articulación de forma multidisciplinaria el combate a un enemigo viral, COVID-19, que está provocando muchas muertes e infecciones con efectos secundarios en la humanidad, además paralizando las economías y el comportamiento de las sociedades. La prioridad en nanotecnología en la actualidad debe ser la salud, a través de la aplicación de nanotransportadores de antivirales como los liposomas que transportan el ARNm, se está pudiendo reducir la pandemia en la mayoría de los países. Se puede realizar pruebas con otros nanotransportadores poliméricos que tienen menor tamaño y que no requieren cadenas de frío muy bajas

(-70 °C), sino transportarlas a temperaturas de 4 °C. Otras estrategias que se deben desarrollar es evitar los contagios a través de cubrebocas antivirales que contienen nanopartículas metálicas muy potentes para desactivar los virus por su tamaño e interacción química que desnaturaliza al virus. Los otros desarrollos en la nanotecnología en las otras áreas de la ciencia no deben de parar, porque los requerimientos en energía, comunicaciones, alimentos y medio ambiente siguen vigentes en cuanto a las necesidades de mejora y desarrollo de nuevos materiales nanométricos que superan grandemente en sus propiedades físicas, químicas y biológicas a sus formas naturales en bulto.

Química Jesús Sanz Asensio,2015-03-07 Está comprobado que la resolución de ejercicios o problemas prácticos de una Ciencia o Materia Experimental ayudan profundamente a comprender sus aspectos teóricos. Por ello, el libro con más de MIL ejercicios resueltos permite incrementar la formación de los estudiantes que inician sus estudios en Química con ejercicios/problemas relacionados con las Disoluciones Químicas y sus formas de cuantificación, así como en Reacciones Químicas, Equilibrios Químicos y en los distintos tipos de Procesos Químicos en disolución como son los procesos Ácido-Base, los Equilibrios de Formación de Complejos, los Procesos de Oxidación-Reducción y su realización práctica en Pilas Electroquímicas, los Equilibrios de Precipitación y los Procesos globales donde se mezclan estos tipos de equilibrios (Equilibrios Concurrentes).

Laboratorio de química general Graciela Müller Carrera, Mercedes Llano Lomas, Héctor García Ortega, 2021-05-01 En este libro se busca que el estudiante de química adquiera conocimientos en forma eficiente mediante la experimentación en el laboratorio. Los quince experimentos que se presentan son el resultado de muchos años de experiencia de los tres autores en las aulas de la Facultad de Química de la Universidad Nacional Autónoma de México (UNAM). El hecho de reunirlos en este texto confiere a los experimentos una dimensión de mayor impacto. Los autores esperan que al ser un texto muy inicial tenga un efecto claro y tangible sobre los estudiantes.

Manual de Preparación PSU - Química 3º y 4º medio Javier Guzmán Porras, 2012 Los manuales de preparación para la Prueba de Selección Universitaria (PSU) son el fruto de la elaboración de un equipo docente de la Pontificia Universidad Católica de Chile. La intención pedagógica es que el alumnado se acerque a las materias que componen la prueba a través de conceptos teóricos y manipulación práctica de los conceptos. Todos los manuales se han ido actualizando de acuerdo con lo propuesto por el Consejo de Rectores.

The Nature of Science in Science Education W.F. McComas,2006-04-11 This is the first book to blend a justification for the inclusion of the history and philosophy of science in science teaching with methods by which this vital content can be shared with a variety of learners. It contains a complete analysis of the variety of tools developed thus far to assess learning in this domain. This book is relevant to science methods instructors, science education graduate students and science teachers.

Developing Models in Science Education J.K. Gilbert, C. Boulter, 2000-11-30 Models and modelling play a central role in the nature of science, in its conduct, in the accreditation and dissemination of its outcomes, as well as forming a bridge to technology. They therefore have an important place in both the formal and informal science education provision made for people of all ages. This book is a product of five years collaborative work by eighteen researchers from four countries. It addresses four key issues: the roles of models in science and their implications for science education; the place of models in curricula for major science subjects; the ways that models can be presented to, are learned about, and can be produced by, individuals; the implications of all these for research and for science teacher education. The work draws on insights from the history and philosophy of science, cognitive psychology, sociology, linguistics, and classroom research, to establish what may be done and what is done. The book will be of interest to researchers in science education and to those taking courses of advanced study throughout the world.
